

Module Handbook M.Sc. Mechatronics and Information Technology 2015 (Master of Science)

SPO 2015 Winter term 2024/25 Date: 05/09/2024

KIT DEPARTMENT OF MECHANICAL ENGINEERING / KIT DEPARTMENT OF ELECTRICAL ENGINEERING AND INFORMATION TECHNOLOGY

KIT – The Research University in the Helmholtz Association

www.kit.edu

Table Of Contents

	Description of the degree program	
2.	Goals, structure and acquisition of competences	
3.	General Information	
	3.1. Study program details	
	3.2. Content	22
	3.3. Qualification Goals	23
	3.4. Studies and Examination Regulations	
4.	Field of study structure	
	4.1. Master's Thesis	
	4.2. General Mechatronics	
	4.3. Field of Specialization	
	4.3.1. Field of Specialization: Automotive Engineering	
	4.3.2. Field of Specialization: Power Engineering	
	4.3.3. Field of Specialization: Microsystems Technology	
	4.3.4. Field of Specialization: Medical Technology	
	4.3.5. Field of Specialization: Industrial Automation	
	4.3.6. Field of Specialization: Control Engineering in Mechatronics	
	4.3.7. Field of Specialization: Robotics	
	4.3.8. Field of Specialization: Design of Mechatronic Systems	
	4.4. Interdisciplinary Subject	
	4.5. Interdisciplinary Qualifications	41
	4.6. Additional Examinations	
5.	Notes on modules and courses	
	Publisher	
1.	Modules	
	7.1. Advanced Artificial Intelligence - M-INFO-106299	
	7.2. Advanced Communications Engineering - M-ETT-100815	
	7.3. Analog Circuit Design - M-ETTT-100466 7.4. Antennas and Multiple Antenna Systems - M-ETIT-100565	
	7.4. Antennas and Multiple Antenna Systems - M-Err-100303	
	7.6. Applied Information Theory - M-ETIT-100444	
	7.0. Applied mornation meory - M-LTT-100444	
	7.8. Automated Manufacturing Systems - M-MACH-105708	
	7.9. Automated Visual Inspection and Image Processing - M-INFO-100826	
	7.10. Automated visual inspection and image rocessing in involtoob20	
	7.11. Automotive Engineering II - M-MACH-100502	
	7.12. Automotive Vision - M-MACH-102693	
	7.13. Basics of Technical Logistics II - M-MACH-105302	
	7.14. Batteries and Fuel Cells - M-ETIT-100532	
	7.15. Batteries and Fuel Cells Laboratory - M-ETIT-100381	
	7.16. Battery and Fuel Cells Systems - M-ETIT-100377	
	7.17. Bioelectric Signals - M-ETIT-100549	
	7.18. BioMEMS - Microfludic Chipsystems V - M-MACH-105484	
	7.19. BioMEMS - Microsystems Technologies for Life Sciences and Medicine I - M-MACH-100489	
	7.20. BioMEMS - Microsystems Technologies for Life Sciences and Medicine II - M-MACH-100490	67
	7.21. BioMEMS - Microsystems Technologies for Life Sciences and Medicine III - M-MACH-100491	68
	7.22. BioMEMS - Microsystemtechnolgy for Life-Science and Medicine IV - M-MACH-105483	69
	7.23. Channel Coding: Algebraic Methods for Communications and Storage - M-ETIT-105616	70
	7.24. Cognitive Automobiles - Laboratory - M-MACH-106744	71
	7.25. Communication Systems and Protocols - M-ETIT-100539	73
	7.26. Communications Engineering II - M-ETIT-105274	74
	7.27. Communications Engineering Laboratory - M-ETIT-100442	75
	7.28. Computational Intelligence - M-MACH-105296	
	7.29. Continuum Mechanics - M-MACH-105180	77
	7.30. Control of Linear Multivariable Systems - M-ETIT-100374	
	7.31. Control of Mobile Machines - M-MACH-106468	79

7.33. Control Technology - M-MACH-105348 7.34. Control Theory Laboratory - M-ETIT-105467	80
7.34. Control Theory Laboratory - M-ETIT-105467	
7.35. Current Topics on BioMEMS - M-MACH-105485	
7.36. Cyber Physical Production Systems - M-ETIT-106039	84
7.37. Deep Learning and Neural Networks - M-INFO-104460	
7.38. Deep Learning for Computer Vision I: Basics - M-INFO-105753	
7.39. Deep Learning for Computer Vision II: Advanced Topics - M-INFO-105755	
7.40. Design of Electrical Machines - M-ETIT-100515	
7.41. Design with Plastics - M-MACH-102712	
7.42. Digital Beam-Forming for Imaging Radar - M-ETIT-105415	
7.43. Digital Circuit Design - M-ETIT-100473	
7.44. Digital Hardware Design Laboratory - M-ETIT-102266	
7.45. Digital Hardware Design Laboratory - M-ETIT-102264	
7.46. Digital Twin Engineering - M-ETIT-106040	. 95
7.47. Digitalization of Products, Services & Production - M-MACH-105476	97
7.48. Distributed Discrete Event Systems - M-ETIT-100361	. 98
7.49. Drive Train of Mobile Machines - M-MACH-105800	
7.50. Dynamics of Electro-Mechanical Systems - M-MACH-105612	
7.51. Dynamics of the Automotive Drive Train - M-MACH-102700	
7.52. Electric Power Transmission & Grid Control - M-ETIT-105394	.102
7.53. Elements of Technical Logistics - M-MACH-102688	
7.54. Elements of Technical Logistics incl. Project - M-MACH-105015	
7.55. Energy Informatics - M-INFO-106864	
7.56. Engineering Mechanics - M-MACH-103205	106
7.57. Engineer's Field of Work - M-MACH-102755	108
7.58. Fabrication Processes in Microsystem Technology - M-MACH-105478	110
7.59. Field Propagation and Coherence - M-ETIT-100566	. 111
7.60. Fundamentals in the Development of Commercial Vehicles - M-MACH-105824	113
7.61. Fundamentals of Combustion I - M-MACH-102707	.115
7.62. Fundamentals of Energy Technology - M-MACH-102690	116
7.63. Fuzzy Sets - M-INFO-100839	
7.64. Handling Characteristics of Motor Vehicles I - M-MACH-105288	
7.65. Hardware Modeling and Simulation - M-ETIT-100449	.119
7.66. Hardware Synthesis and Optimisation - M-ETIT-100452	120
7.67. Hardware/Software Co-Design - M-ETIT-100453	.121
7.68. Heat and Mass Transfer - M-MACH-102717	122
7.69. High-Voltage Technology - M-ETIT-105060	
	123
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology 	123 124
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 	123 124 125
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 7.72. Humanoid Robotics Laboratory - M-INFO-105792 	123 124 125 126
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 .128
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 .128 .129
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 .128 .129 .130
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 .128 .129 .130 .131
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 .128 .129 .130 .131 .132
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 128 .129 130 .131 .132 133
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 7.72. Humanoid Robotics Laboratory - M-INFO-105792 7.73. Humanoid Robots - Locomotion and Whole-Body Control - M-INFO-106649 7.74. Humanoid Robots - Seminar - M-INFO-102561 7.75. Industrial Circuitry - M-ETIT-100399 7.76. Information Fusion - M-ETIT-103264 7.77. Information Processing in Sensor Networks - M-INFO-100895 7.78. Information Systems and Supply Chain Management - M-MACH-105281 7.79. Information Technology in Industrial Automation Systems - M-ETIT-100367 7.80. Innovation and Project Management in Rail Vehicle Engineering - M-MACH-106514 	123 124 125 126 .127 128 .129 130 .131 .132 133 134
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 128 .129 130 .131 .132 133 134 135
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 128 .129 130 .131 .132 133 .134 135 136
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 7.72. Humanoid Robotics Laboratory - M-INFO-105792 7.73. Humanoid Robots - Locomotion and Whole-Body Control - M-INFO-106649 7.74. Humanoid Robots - Seminar - M-INFO-102561 7.75. Industrial Circuitry - M-ETIT-100364 7.76. Information Fusion - M-ETIT-103264 7.77. Information Processing in Sensor Networks - M-INFO-100895 7.78. Information Systems and Supply Chain Management - M-MACH-105281 7.79. Information Technology in Industrial Automation Systems - M-ETIT-100367 7.80. Innovation and Project Management in Rail Vehicle Engineering - M-MACH-10514 7.81. Innovative Concepts for Programming Industrial Robots - M-INFO-100791 7.82. Integrated Intelligent Sensors - M-ETIT-100457 7.83. Integrated Systems and Circuits - M-ETIT-100474 	123 124 125 126 .127 128 129 130 .131 .132 133 134 135 136 .137
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 128 .129 130 .131 .132 133 134 135 136 .137 138
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 7.72. Humanoid Robotics Laboratory - M-INFO-105792 7.73. Humanoid Robots - Locomotion and Whole-Body Control - M-INFO-106649 7.74. Humanoid Robots - Seminar - M-INFO-102561 7.75. Industrial Circuitry - M-ETIT-100399 7.76. Information Fusion - M-ETIT-103264 7.77. Information Processing in Sensor Networks - M-INFO-100895 7.78. Information Systems and Supply Chain Management - M-MACH-105281 7.79. Information Technology in Industrial Automation Systems - M-ETIT-100367 7.80. Innovation and Project Management in Rail Vehicle Engineering - M-MACH-106514 7.81. Innovative Concepts for Programming Industrial Robots - M-INFO-100791 7.82. Integrated Intelligent Sensors - M-ETIT-100457 7.83. Integrated Systems and Circuits - M-ETIT-100474 7.84. International Production Engineering - M-MACH-105109 	123 124 125 126 .127 128 .129 130 .131 .132 133 134 135 136 .137 138 140
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 7.72. Humanoid Robotics Laboratory - M-INFO-105792 7.73. Humanoid Robots - Locomotion and Whole-Body Control - M-INFO-106649 7.74. Humanoid Robots - Seminar - M-INFO-102561 7.75. Industrial Circuitry - M-ETIT-103264 7.76. Information Fusion - M-ETIT-103264 7.77. Information Processing in Sensor Networks - M-INFO-100895 7.78. Information Systems and Supply Chain Management - M-MACH-105281 7.79. Information Technology in Industrial Automation Systems - M-ETIT-100367 7.80. Innovation and Project Management in Rail Vehicle Engineering - M-MACH-106514 7.81. Innovative Concepts for Programming Industrial Robots - M-INFO-100791 7.82. Integrated Intelligent Sensors - M-ETIT-100457 7.83. Integrated Systems and Circuits - M-ETIT-100474 7.84. International Production Engineering - M-MACH-105109 7.85. Introduction into Energy Economics - M-WIWI-100498 	123 124 125 126 .127 128 .129 130 .131 .132 133 134 135 136 .137 138 140 141
 7.69. High-Voltage Technology - M-ETIT-105060 7.70. High-Voltage Test Technique - M-ETIT-100417 7.71. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy - M-INFO-100725 7.72. Humanoid Robotics Laboratory - M-INFO-105792 7.73. Humanoid Robots - Locomotion and Whole-Body Control - M-INFO-106649 7.74. Humanoid Robots - Seminar - M-INFO-102561 7.75. Industrial Circuitry - M-ETIT-100399 7.76. Information Fusion - M-ETIT-103264 7.77. Information Processing in Sensor Networks - M-INFO-100895 7.78. Information Systems and Supply Chain Management - M-MACH-105281 7.79. Information Technology in Industrial Automation Systems - M-ETIT-100367 7.80. Innovation and Project Management in Rail Vehicle Engineering - M-MACH-106514 7.81. Innovative Concepts for Programming Industrial Robots - M-INFO-100791 7.82. Integrated Intelligent Sensors - M-ETIT-100457 7.83. Integrated Systems and Circuits - M-ETIT-100474 7.84. International Production Engineering - M-MACH-105109 7.85. Introduction to Bionics - M-MACH-106525 7.87. Introduction to Bionics - M-MACH-106525 7.87. Introduction to Microsystem Technology I - M-MACH-102691 	123 124 125 126 .127 128 .129 130 .131 .132 133 134 135 136 .137 138 140 141 142
 7.69. High-Voltage Technology - M-ETIT-105060	123 124 125 126 .127 128 129 130 .131 132 133 134 135 136 .137 138 140 141 142 143

7.91. Key Competences - M-ETIT-103248	
7.92. Lab Computer-Aided Methods for Measurement and Control - M-MACH-105291	
7.93. Lab Course Electrical Drives and Power Electronics - M-ETIT-100401	150
7.94. Lab Course Electrical Power Engineering - M-ETIT-100419	151
7.95. Lab Course on Nanoelectronics - M-ETIT-100468	
7.96. Laboratory Biomedical Engineering - M-ETIT-100389	
7.97. Laboratory FPGA Based Circuit Design - M-ETIT-100470	154
7.98. Laboratory Information Systems in Power Engineering - M-ETIT-100415	155
7.99. Laboratory Mechatronic Measurement Systems - M-ETIT-103448	156
7.100. Laboratory Mechatronics - M-MACH-102699	
7.101. Laboratory Nanotechnology - M-ETIT-100478	
7.102. Laboratory Optoelectronics - M-ETIT-100477	
7.103. Laboratory Solar Energy - M-ETIT-102350	163
7.104. Lighting Engineering - M-ETIT-100485	
7.105. Lightweight Engineering Design - M-MACH-102696	166
7.106. Localization of Mobile Agents - M-INFO-100840	
7.107. Logistics and Supply Chain Management - M-MACH-105298	
7.108. Machine Dynamics - M-MACH-102694	170
7.109. Machine Learning - Foundations and Algorithms - M-INFO-105778	
7.110. Machine Learning 1 - M-WIWI-105003	172
7.111. Machine Learning 2 - M-WIWI-105006	
7.112. Machine Learning and Optimization in Energy Systems - M-WIWI-106604	174
7.113. Machine Learning for Robotic Systems 1 - M-MACH-106457	175
7.114. Machine Learning for Robotic Systems 2 - M-MACH-106652	
7.115. Machine Tools and Industrial Handling - M-MACH-105107	
7.116. Machine Vision - M-MACH-101923	
7.117. Major Field: Integrated Product Development - M-MACH-102626	
7.118. Manufacturing Measurement Technology - M-ETIT-103043	
7.119. Master's Thesis - M-ETIT-103253	
7.120. Material Flow in Logistic Systems - M-MACH-104984	
7.121. Materials - M-ETIT-102734	
7.122. Materials for Lightweight Construction - M-MACH-102727	
7.123. Measurement Technology - M-ETIT-105982	
7.124. Mechanics in Microtechnology - M-MACH-102713	
7.125. Medical Image Processing for Guidance and Navigation - M-ETIT-106672	
7.126. Medical Imaging Technology - M-ETIT-106778	
7.127. Medical Imaging Technology II - M-ETIT-106670	
7.128. Medical Measurement Technology - M-ETIT-106679	
7.129. Micro System Simulation - M-MACH-105486	
7.130. Microactuators - M-MACH-100487	
7.131. Microenergy Technologies - M-MACH-102714	
7.132. Microsystem Technology - M-ETIT-100454	
7.133. Microwave Engineering - M-ETIT-100535	
7.134. Microwave Engineering Lab - M-ETIT-105300	
7.135. Microwaves Measurement Techniques - M-ETIT-100424	
7.136. Modern Control Concepts I - M-MACH-105308	
7.137. Modern Control Concepts II - M-MACH-105313	
7.138. Modern Control Concepts III - M-MACH-105314	
7.139. Modern Radio Systems Engineering - M-ETIT-100427	
7.140. Motion in Human and Machine - Seminar - M-INFO-102555	
7.141. Motor Vehicle Laboratory - M-MACH-102695	
7.142. Nano- and Quantum Electronics - M-ETIT-105604	
7.143. Nonlinear Control Systems - M-ETIT-100371	
7.144. Nonlinear Optics - M-ETIT-100430 7.145. Novel Actuators and Sensors - M-MACH-105292	
7.145. Novel Actuators and Sensors - M-MACH-105292 7.146. Numerical Methods - M-MATH-105831	
7.146. Numerical Methods - M-MATH-105831 7.147. Optical Communicatons Laboratory - M-ETIT-100437	
7.147. Optical Communicators Laboratory - M-ETIT-100437 7.148. Optical Design Lab - M-ETIT-100464	
7.148. Optical Design Lab - M-ETT-100464	
7.149. Optical Transmitters and Receivers - M-ETIT-100436	
7.150. Optical wavegulaes allu Libers - M-ETT-100500	

7.151. Optimal Control and Estimation - M-ETIT-102310	
7.152. Optimization of Dynamic Systems - M-ETIT-100531	227
7.153. Optoelectronic Measurement Engineering - M-ETIT-100484	
7.154. Optoelectronics - M-ETIT-100480	
7.155. Organ Support Systems - M-MACH-102702	230
7.156. Pattern Recognition - M-INFO-100825	
7.157. Photovoltaics - M-ETIT-100513	232
7.158. Physical and Data-Based Modelling - M-ETIT-105468	
7.159. Physiology and Anatomy for Biomedical Engineering - M-ETIT-105874	235
7.160. Plasma Sources - M-ETIT-100481	
7.161. Plastic Electronics / Polymerelectronics - M-ETIT-100475	
7.162. Power Electronic Systems in Energy Technology - M-ETIT-106067	
7.163. Power Electronics - M-ETIT-104567	
7.164. Power Electronics for Photovoltaics and Wind Energy - M-ETIT-102261	
7.165. Power Network - M-ETIT-100572	
7.166. Power Systems and Economy - M-ETIT-100413	
7.167. Power Transmission and Power Network Control - M-ETIT-100534	
7.168. Practical Aspects of Electrical Drives - M-ETIT-100394	
7.169. Practical Course: Human-Centred Robotics - M-INFO-106646	
7.170. Practical Course: Machine Learning and Intelligent Systems - M-INFO-105958	
7.170. Practical Course: Machine Learning and Intelligent Systems - M-INFO-105958	
7.172. Practical Course: Smart Energy System Lab - M-INFO-105955	
7.172. Practical Course. Smart Energy System Lab - M-INPO-105955	
7.173. Practical Machine Learning - M-ETT-106073	
7.175. Practical Project Robotics and Automation II (Hardware) - M-INFO-102230	
7.176. Practical Tools for Control Engineers - M-ETIT-106780	
7.177. Practical Training in Basics of Microsystem Technology - M-MACH-105479	
7.178. Principles of Medicine for Engineers - M-MACH-102720	
7.179. Principles of Whole Vehicle Engineering I - M-MACH-105289	
7.180. Principles of Whole Vehicle Engineering II - M-MACH-105290	
7.181. Product Development – Methods of Product Engineering - M-MACH-102718	
7.182. Production Techniques Laboratory - M-MACH-102711	
7.183. Project Management in the Development of Products for Safety-Critical Applications - M-ETIT-104475	
7.184. ProVIL - Product Development in a Virtual Idea Laboratory - M-MACH-105418	
7.185. Quality Management - M-MACH-105332	
7.186. Rail System Technology - M-MACH-103232	
7.187. Rail Vehicle Technology - M-MACH-102683	
7.188. Railway System Digitalisation - M-MACH-106513	
7.189. Re:Invent - Revolutionary Business Models as the Basis for Product Innovations - M-MACH-106662	
7.190. Real Time Control of Electrical Drives - M-ETIT-105916	
7.191. Reinforcement Learning - M-INFO-105623	
7.192. Reliability and Test Engineering - M-MACH-106050	
7.193. Renewable Energy-Resources, Technologies and Economics - M-WIWI-100500	
7.194. Robotics - Practical Course - M-INFO-102522	
7.195. Robotics I - Introduction to Robotics - M-INFO-100893	
7.196. Robotics II - Humanoid Robotics - M-INFO-102756	
7.197. Robotics III - Sensors and Perception in Robotics - M-INFO-104897	
7.198. Seamless Engineering - M-MACH-105725	
7.199. Seminar Accessibility - Assistive Technologies for Visually Impaired Persons - M-INFO-102374	
7.200. Seminar Data-Mining in Production - M-MACH-105477	
7.201. Seminar Embedded Systems - M-ETIT-100455	289
7.202. Seminar for Rail System Technology - M-MACH-104197	290
7.203. Seminar Intelligent Industrial Robots - M-INFO-102212	
7.204. Seminar Novel Concepts for Solar Energy Harvesting - M-ETIT-103447	
7.205. Seminar Radar and Communication Systems - M-ETIT-100428	
7.206. Seminar: Assistive robotics and exoskeletons in medical applications - M-INFO-106400	
7.207. Seminar: Energy Informatics - M-INFO-103153	
7.208. Sensors - M-ETIT-100378	
7.209. Signal Processing Lab - M-ETIT-106633	
7.210. Signal Processing Methods - M-ETIT-106899	

	7.211. Signal Processing with Nonlinear Fourier Transforms and Koopman Operators - M-ETIT-106675	
	7.212. Simulation and Optimization in Robotics and Biomechanics - M-INFO-106504	
	7.213. Software Engineering - M-ETIT-100450	
	7.214. Software Radio - M-ETIT-100439	
	7.215. Solar Energy - M-ETIT-100524	
	7.216. Spaceborne Radar Remote Sensing - M-ETIT-103042	
	7.217. Stochastic Information Processing - M-INFO-100829	
	7.218. Student Innovation Lab - M-ETIT-105073	
	7.219. Superconducting Magnet Technology - M-ETIT-106684	
	7.220. Superconducting Power Systems - M-ETIT-106683	
	7.221. Supplementary Studies on Science, Technology and Society - M-FORUM-106753	
	7.222. System Integration in Micro- and Nanotechnology - M-MACH-105315	
	7.223. System Integration in Micro- and Nanotechnology 2 - M-MACH-105316	
	7.224. System-on-Chip Laboratory - M-ETIT-100451	
	7.225. Systems and Software Engineering - M-ETIT-100537	
	7.226. Technical Design in Product Development - M-MACH-105318	
	7.227. Technical Optics - M-ETIT-100538	
	7.228. Thermal Solar Energy - M-MACH-102388	
	7.229. Ubiquitous Computing - M-INFO-100789	
	7.230. Ultrasound Imaging - M-ETIT-100560	
	7.231. Vehicle Lightweight Design - Strategies, Concepts, Materials - M-MACH-102703	
	7.232. Vehicle Systems for Urban Mobility - M-MACH-106515	
	7.233. Virtual Engineering 1 - M-MACH-105293	
	7.234. Virtual Engineering A - M-MACH-101283	
	7.235. Virtual Engineering Lab - M-MACH-105475	
	7.236. Wearable Robotic Technologies - M-INFO-103294	
8.	Courses	
	8.1. Advanced Artificial Intelligence - T-INFO-112768	
	8.2. Advanced Communications Engineering - T-ETIT-113676	
	8.3. Analog Circuit Design - T-ETIT-100973	
	8.4. Antennas and Multiple Antenna Systems - T-ETIT-106491	
	8.5. Appliance and Power Tool Design - T-MACH-105229	
	8.6. Appliance and Power Tool Design Project Work - T-MACH-110767	
	8.7. Applied Information Theory - T-ETIT-100748	
	8.8. Artificial Intelligence in Production - T-MACH-112115	
	8.9. Automated Manufacturing Systems - T-MACH-108844	
	8.10. Automated Visual Inspection and Image Processing - T-INFO-101363	
	8.11. Automotive Engineering I - T-MACH-100092	
	8.12. Automotive Engineering II - T-MACH-102117	
	8.13. Automotive Vision - T-MACH-105218	
	8.14. Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration - T-FORL	
	8.15. Basics of Technical Logistics II - T-MACH-109920	
	8.16. Batteries and Fuel Cells - T-ETIT-100983	
	8.17. Batteries and Fuel Cells Laboratory - T-ETIT-100708	
	8.18. Battery and Fuel Cells Systems - T-ETIT-100704	
	8.19. Bioelectric Signals - T-ETIT-101956	
	8.20. BioMEMS - Microfludic Chipsystems V - T-MACH-111069	
	8.21. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine I - T-MACH-100966	
	8.22. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine II - T-MACH-100967	
	8.23. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine III - T-MACH-100968	
	8.24. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine IV - T-MACH-106877	
	8.25. CATIA Advanced - T-MACH-105312	
	8.26. CATIA CAD Training Course - T-MACH-102185	
	8.27. Channel Coding: Algebraic Methods for Communications and Storage - T-ETIT-111244	
	8.28. Cognitive Automobiles - Laboratory - T-MACH-105378	
	8.29. Communication Systems and Protocols - T-ETIT-101938	
	8.30. Communications Engineering II - T-ETIT-110697	
	8.31. Communications Engineering Laboratory - T-ETIT-100746	
	8.32. Composite Manufacturing - Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies - T MACH-105535	- 369

	Computational Intelligence - T-MACH-105314	
8.34.	Continuum Mechanics of Solids and Fluids - T-MACH-110377	371
	Control of Linear Multivariable Systems - T-ETIT-100666	
8.36.	Control of Mobile Machines - T-MACH-111821	373
8.37.	Control of Mobile Machines – Prerequisites - T-MACH-111820	374
8.38.	Control of Power-Electronic Systems - T-ETIT-111897	375
	Control Technology - T-MACH-105185	
	Control Theory Laboratory - T-ETIT-111009	
	Current Topics on BioMENS - T-MACH-102176	
	Cyber Physical Production Systems - T-ETIT-112223	
	Deep Learning and Neural Networks - T-INFO-109124	
	Deep Learning for Computer Vision I: Basics - T-INFO-111491	
	Deep Learning for Computer Vision II: Advanced Topics - T-INFO-111494	
	Design of Electrical Machines - T-ETIT-100785	
	Design with Plastics - T-MACH-105330	
	Digital Beam-Forming for Imaging Radar - T-ETIT-110940	
	Digital Circuit Design - T-ETIT-100974	
	Digital Circuit Design - 1-ETT-100974 Digital Hardware Design Laboratory - T-ETIT-104571	
	Digital Hardware Design Laboratory - T-ETIT-104371	
	Digital Twin Engineering - T-ETIT-112224	
	Digital Twin Engineering - T-ETTT-12224 Digitalization of Products, Services & Production - T-MACH-108491	
	Digitization in the Railway System - T-MACH-113016	
	Distributed Discrete Event Systems - T-ETIT-100960	
	Drive Train of Mobile Machines - T-MACH-105307	
	Dynamics of Electro-Mechanical Systems - T-MACH-111260	
	Dynamics of the Automotive Drive Train - T-MACH-105226	
	Educational Development for Student Teachers - Basic Level - T-ETIT-100797	
8.60.	Elective Specialization Supplementary Studies on Science, Technology and Society / About Knowledge and Science - Self-Registration - T-FORUM-113580	397
8.61.	Flashing Canadalization Complementary Chudica on Colones, Technology and Caristy / Colones in Dublic Debate	s 398

1.2. Subjects

The legal basis for the degree program and the conduct of examinations are the currently valid Study and Examination Regulations (Studien- und Prüfungsordnung, SPO) (<u>https://www.mach.kit.edu/Master-MIT.php?tab=%5B3687%5D#tabpanel-3687</u>).

The program degree M.Sc. Mechatronics and Information Technology consists of the following subjects, which are explained in more detail in this chapter. A detailed list of the corresponding modules can be found in the chapter "Structure of degree program".

- General Mechatronics: 32 CR
- Field of Specialization: 35 CR
- Interdisciplinary Subject: 17 CR
- Interdisciplinary Qualifications: 6 CR
- Master's Thesis: 30 CR

In total: 120 CR

General Mechatronics

This subject consists of compulsory modules that must be completed by the students. In the modules "Technische Mechanik" and "Werkstoffe" there are elective options.

Field of Specialization

Students choose a Field of Specialization from the following list. Each field includes 35 credit points:

- Automotive Engineering (Fahrzeugtechnik)
- Power Engineering (Energietechnik)
- Microsystems Technology (Mikrosystemtechnik)
- Medical Technology (Medizintechnik)
- Industrial Automation (Industrieautomation)
- Control Engineering in Mechatronics (Regelungstechnik in der Mechatronik)
- Robotics (*Robotik*)
- Design of Mechatronic Systems (Konstruktion Mechatronischer Systeme)

In addition to the compulsory modules, each Field of Specialization contains supplementary modules, which can be compiled from the list of courses given. The minimum number of 35 credit points required for the Field of Specialization must be achieved (or can be exceeded once). If necessary, several modules from the list of selectable supplementary modules must be combined.

The list of supplementary modules may be subject to adjustments resulting from the departure of teaching staff, the reorganization of courses and other circumstances. Therefore, the module list in the module handbook is adjusted to current conditions before each semester. In principle, students can choose all supplementary modules for their study plan that are included in the recent module handbook. Omitted modules cannot be started any more. If they have already been taken, they will of course remain valid. Exams will be offered two additional terms after the course was given at last.

Modules that have already been taken in the program of the Bachelor's degree in Mechatronics and Information Technology or in related programs cannot be selected as supplementary modules in the Master's degree program. If a compulsory module has already been taken in the Bachelor's degree program, it will be replaced by a supplementary module of the chosen Field of Specialization.

If there is demonstrably no place available in all the selectable internships of the desired Field of Specialization, then, as an exception, an internship of a different Field of Specialization, that is suitable in terms of content, can be selected. This requires the approval of a program consultant (https://www.mach.kit.edu/1982.php?tab=%5B2693%5D#tabpanel-2693).

Students who have already chosen a Field of Specialization that is no longer offered in the current curriculum, please refer to previous module handbooks in the archive (<u>https://www.etit.kit.edu/modulhandbuecher_archiv.php</u>).

Interdisciplinary Subject

The Interdisciplinary Subject consists of modules in the amount of 17 CR. If 17 CR cannot be achieved through the choice of modules exactly, overbooking by a maximum of one module is possible. The modules can be freely chosen by the students from the modules listed below. Other courses of the Master's degree programs in Electrical Engineering and Information Technology, Mechanical Engineering, or Informatics/Computer Science can be chosen after application at the Program Service Master. The chosen modules should fit thematically to the Field of Specialization and at most one practical course and one seminar should be chosen.

Particularly in the case of courses offered by the KIT Department of Informatics, the consent of the lecturer(s) must be obtained before a module is included in the Interdisciplinary Subject.

In the process, it must also be clarified whether the students have the necessary subjectspecific prerequisites for the selected module. This matching is the responsibility of the student.

In the Interdisciplinary Subject, no module can be selected, which has already been selected in the Field of Specialization or which has already been examined in the Bachelor's degree program in Mechatronics and Information Technology or in related degree programs.

The choice of supplementary modules in the Field of Specialization and modules in the Interdisciplinary Subject is made electronically in Campus Management Portal (<u>https://campus.studium.kit.edu/english/index.php</u>).

Interdisciplinary Qualifications

Interdisciplinary Qualifications are modules with a predominantly non-technical content; these must be completed with an evaluated proof of credit points. The module "*Das Arbeitsfeld des Ingenieurs*" (2 CR) is already fixed. The other modules in the amount of 4 CR can be selected from the range of events offered by KIT.

For example, courses from the following areas are recommended: Management, Entrepreneurship, Business Administration, Law, Patents. Typically, these are courses from the HOC, ZAK, and Language Center (*SPZ*), as well as Interdisciplinary Qualifications offered by the KIT Department of Electrical Engineering and Information Technology and the KIT Department of Mechanical Engineering. Further Interdisciplinary Qualifications can be acquired within the subject "Additional Examinations". Achievements can be booked in the module "Key Competences (*Schlüsselqualifikationen*)" by the students themselves. Students can access the module via the menu item "Examinations – Exam Registration and Unregistration" at the Campus Management Portal, which is also used to access the study schedule. Here you will find a tab "*ÜQ/SQ-Leistungen*", which displays the list of unassigned own achievements.

In the following, the taken Interdisciplinary Qualifications have to be assigned to the courses (*Teilleistungen*) of HoC, ZAK or SPZ with the title "Self Assignment-HOC-SPZ-ZAK..." according to the grading scale, graded or ungraded. Title and credits of the achievement are adopted automatically.

1.3. Curriculum

4. Term (SS) MT: Master's Thesis Number of CR: 30 Number of oral examinations: -Number of written examinations: -

Total number of examinations: 19

1.4. Additional Examinations

According to SPO Article 15, additional examinations can be acquired, that may result in up to 30 credit points more than required for passing the Master's examination. When registering for an examination in a module, this must already be declared as an additional examination. The assignment of a module can be changed again later on request.

Additional examinations are not included in the overall grade, but are listed in the Transcript of Records.

1.5. Recognition of external study achievements

The basic rules for the recognition of external achievements (credits and grades) can be found in the study and examination regulations:

- Bachelor SPO 2016 of 03-05-2016, Article 19 and changes of 28-09-2018, Article 19
- Master SPO 2015 of 10-07-2015, Article18 and correction of 30-06-2016

According to these regulations, the achievements required in the curriculum can also be achieved through recognition of external credits and grades.

External achievements may be acquired as follows:

1. within the higher education system (worldwide)

2. outside the higher education system (at institutions with standardized quality assurance systems; recognition may be denied if more than 50 percent of the curriculum are to be substituted)

Recognition is granted upon application by the student. With regard to the acquired competencies, it must be ensured that there is no significant difference to the achievements or degrees that are to be replaced. The application must be submitted within the first semester after enrollment at KIT.

The examination board is responsible for recognition and crediting and involves the responsible program consultant in the decision. Recognized credits and grades that were not achieved at KIT are shown as "recognized" in the transcript of records.

There are two options for recognition:

Recognition instead of a KIT event

An event taught at KIT is replaced by the recognized event. The examination whether the acquired competences are equivalent to the KIT event is carried out by the subject examiner who conducts the event to be replaced at KIT.

- Recognition of the original event

The event will be recognized with the original title. The course can be taken in the Interdisciplinary Subject, in the Interdisciplinary Qualifications, or in the Additional Examinations. The examination whether the acquired competences justify a recognition is carried out by the program consultant.

Experience has shown that recognition "instead of" is difficult, because the competencies taught in courses are usually determined by the lecturer and are rarely the same at other universities. Recognition of "the original", on the other hand, only checks whether the competencies acquired are appropriate to a university course.

If a comparable grading system is used, the grade of the performance to be recognized is taken over. If the grading system is not comparable, the grade will be converted. Examination which are to be recognized instead of a graded examination must also be graded.

The exact procedure is described at "Richtlinien zur Anerkennung von Studien- und Prüfungsleistungen im Studiengang Mechatronik und Informationstechnik" (in German: <u>https://www.mach.kit.edu/Master-MIT.php?tab=%5B3682%5D#tabpanel-3682</u>).

1.6. Semester abroad and student mobility

The KIT departments support and promote stays abroad. For this purpose, there are a number of partnerships with foreign universities. Please contact the departments for up-to-date information. However, students are also encouraged to contact foreign universities on their own.

It is advisable to complete most of the compulsory modules in General Mechatronics and in the Field of Specialization before the stay abroad. The work done at the foreign institution can then be recognized in the Interdisciplinary Subject and in the Interdisciplinary Qualifications. Therefore, the third semester is well suited for a stay abroad.

Prior to the stay abroad, the achievements to be made at the foreign university are fixed in a written Learning Agreement. The current form and detailed information can be found on the websites of the KIT Department of Electrical Engineering and Information Technology

(<u>https://www.etit.kit.edu/erasmus_outgoing.php</u>) and the KIT Department of Mechanical Engineering (<u>https://www.mach.kit.edu/1703.php</u>). Under the title "Recognition at the Sending Institution" it is stated in which subject the modules in the degree program Mechatronics and Information Technology are recognized at KIT. Please contact a program consultant with the completed form.

After the stay abroad, the examination results obtained abroad will be recognized in accordance with the procedure in section 1.5.

1.7. Calculation of grades

The module grades in General Mechatronics, the Field of Specialization, and the Interdisciplinary Subject are weighted with the corresponding credit points to form the overall grade. The calculation of grades is based on the regulations of the study and examination regulations, Article 7, paragraph 4, 7, and 9 as well as Article 2, paragraph 2.

1.8. Master's Thesis

The Master's Thesis should demonstrate that the student is able to work on a problem from the field of mechatronics and information technology independently and within a limited time, using scientific methods that correspond to the state of the art in research. The module Master's Thesis is assigned to 30 credit points. It consists of the Master's Thesis and a final presentation of the results. The presentation has to take place within the preparation of the Master's Thesis.

The prerequisite for admission to the module Master's Thesis is that the student is usually in the 2nd year of study and has successfully completed module examinations in the sum of 75 CR.

The recommended preparation time is four months in full-time. The maximum preparation time is six months.

The Master's Thesis may be completed at all institutes at the KIT Department of Electrical Engineering and Information Technology and the KIT Department of Mechanical Engineering.

Due to the interdisciplinary orientation, the participation of institutes of other faculties is desired. With the approval of the examination board, external Master's Theses can also be approved, provided that supervision by a university lecturer is guaranteed. The registration of the Master's Thesis has to be done electronically in the Campus Management by the students themselves (<u>https://campus.studium.kit.edu/english/index.php</u>), but only after consultation and approval by the supervising professor.

2. Goals, structure and acquisition of competences

2.1 Conformity of module structure with competence goals

The Master's degree program is structured according to the following concept:

- Teaching of basic engineering knowledge within the compulsory subject of General Mechatronics in the first two terms to the extent of 32 credit points. Included are basic modules that convey the basic scientific knowledge of mechatronics, e.g. numerical mathematical methods, multibody dynamics, product development, methods of product engineering, materials selection, measurement technology, control engineering.
- Intensive specialization in an area of choice. For this purpose, eight Fields of Specialization with a total of 35 credit points are offered. Each Field of Specialization consists mainly of compulsory modules (core modules), which are specified according to the chosen Field of Specialization. In addition, further courses (supplementary modules) of the areas electrical and mechanical engineering as well as information and computer technology are offered, which the students can compile themselves.
- Further specialization is possible within the framework of the Interdisciplinary Subject (17 credit points). The modules of the Interdisciplinary Subject are compiled by the students from the master's courses of the areas electrical and mechanical engineering as well as information and computer technology.
- The range of specific elective modules some are held by lecturers from renowned research institutions and industry is very large. To provide a flexible offer, some modules are designated with less than 5 credit points. This is explicitly supported by the student representatives.
- The final module composition should be coherent in content and must be approved by the program consultant.
- During the preparation of their Master's thesis, students are guided to conduct independent scientific research.

The final choice of the individual Field of Specialization may be accomplished in the second or third term, as illustrated in the following table:

Term	Subject	LP/CR
1	General Mechatronics (32 CR)	30
2	Field of Specialization (35 CR)	30
3	Interdisciplinary Subject (17 CR)	24
	Interdisciplinary Qualifications	6
4	Master's Thesis	30

An essential fundamental component of the Master's degree program is the great freedom that students are given in the selection of elective modules, the Interdisciplinary Qualifications, and the entire scheduling of studies. This way the students' self and social competence can be optimally promoted.

The structure of the Master's degree program and its modules thus support the qualification goals, formulated above:

The fundamentally oriented courses of the compulsory subject Mechatronics are primarily completed in the first two terms. Based on this is the Field of Specialization, in which students can choose from one of eight specializations. The courses in the Field of Specialization are mainly held in the second and third term. At the same time, starting in the first term, the Interdisciplinary Qualifications are completed.

Finally, the fourth term is reserved for the Master's Thesis.

2.2 Acquisition of competences

In the Master's degree program, the acquisition of interdisciplinary competencies is promoted through seminars, university internships, Interdisciplinary Qualifications, and the Master's Thesis, as well as through the general organization of the studies.

Most students complete a seminar as part of the Interdisciplinary Subject (seminars are offered by many institutes and are basically structured in the same way). There they specifically learn to conduct independent literature research, have to apply oral and technical presentation skills and prepare documentations. They learn to work in a self-organized and reflexive manner and improve their communicative, organizational, and didactical skills. They have to analyze a topic independently and present it to an expert audience.

In the university's internships and laboratories (each Field of Specialization contains an internship as a core module), the focus is on imparting expert knowledge and the practical handling of laboratory equipment or software tools. Here, students will sharpen their analytical skills through playful handling of technology and, at the same time, learn how to work together in teams and develop their own ideas and solutions.

The Interdisciplinary Qualifications with an amount of 6 CR are scheduled within the first to third term.

In the first term, a specific ring course is offered in the Master's degree program in Mechatronics and Information Technology. Within this course professors impart their professional experience and practical knowledge in the areas of project management, cooperation with production and marketing, governance, processes, and organization.

In the third term, another specific course is offered in the Master's degree program, in which students are taught theoretical knowledge as well as practical experience in leading interdisciplinary teams (under guidance). This is done in cooperation with the workshop "Mechatronische Systeme und Produkte" of the Bachelor's degree program in Mechatronics and Information Technology.

In addition, courses from the KIT-Department of Electrical Engineering and Information Technology, Mechanical Engineering, and other departments or the House of Competence can be chosen. The selected courses must have a predominantly non-technical content and should be related to the future professional field of an engineer. The Interdisciplinary Qualifications are intended to build up competencies in interdisciplinary thinking, in conveying expert knowledge from non-electrical or non-mechanical engineering disciplines, as well as in writing and speaking a foreign language.

The Master's Thesis, which must be completed in the fourth term, corresponds to 30 CR. Students learn how to apply scientific methods in the development of new ideas and solutions. They train their analytical thinking as well as working efficiently towards a goal under a given timeline. In addition, students learn to organize themselves and their work process effectively. Knowledge gaps are identified and closed. The Master's Thesis ends with a final presentation of about 20 minutes followed by a discussion (defense). During the preparation

of the presentation, the students are guided and supported by their supervisors. The students learn to communicate own and collaboratively developed results in written and oral form. While working on the Master's Thesis, it is expected to attend the presentations and defenses of fellow students. This trains to communicate and collaborate with specialists in related disciplines.

The ability to work independently, to organize oneself optimally, and to clearly structure even large long-term tasks can hardly be conveyed in a course by simple explanation. In order to enable students to train themselves optimally in this respect, a large degree of freedom in the selection of courses, in the Interdisciplinary Subject, the Interdisciplinary Qualifications, and the entire scheduling of studies is an essential part of the Master's degree program. Only in this way students can optimally attain self- and social competence.

3 General Information

3.1 Study program details

KIT-Department	KIT Department of Mechanical Engineering / KIT Department of Electrical Engineering and Information Technology
Academic Degree	Master of Science (M.Sc.)
Examination Regulations Version	2015
Regular terms	4 terms
Maximum terms	8 terms
Credits	120
Language	Deutsch
Grade calculation	Weighted average by credits
Additional Information	Link to study program www.stg-mit.kit.edu
	Department https://www.mach.kit.edu/Master-MIT.php
	Business unit Studium und Lehre https://www.sle.kit.edu/vorstudium/master-mechatronik-informationstechnik.php

3.2 Content

The academic qualifications obtained in the Bachelor's degree are further deepened and supplemented in the Master's degree. The graduates are able to apply the scientific knowledge and methods independently and to evaluate their significance and reach for the solution of complex scientific and social problems.

The field of study is chosen by the students through the selection of the field of specialization and the elective modules in the interdisciplinary subject. The individual selection of the elective modules is approved by a study advisor.

3.3 Qualification Goals

The competence goals of the Master's degree program Mechatronics and Information Technology are divided into the following four main competence profiles:

- 1. **Expertise**: Students get to know the fundamentals of the discipline, as well as current research topics, processes, and results.
- 2. **Research and problem-solving skills**: Students learn the skills and techniques to meet challenges in research and industry.
- 3. **Assessment and planning skills**: Students participate in professional and research discourse and apply acquired knowledge, as well as learned techniques.
- 4. Personal and social skills: Students work on (their own) research projects, are integrated into a scientific team, are capable of independent and sustained professional and scientific development, and assess the social and societal impact of their activities.

For points 1 and 2 the focus is on lecturer activity, for points 3 and 4 correspondingly on student activity. For the Master's degree program, these competence requirements can be further described in the following objectives:

Expert knowledge

The graduates of the Master's degree program Mechatronics and Information Technology

- have an in-depth knowledge of mathematics and physics and an advanced expert knowledge of electrical and mechanical engineering as well as information technology. They are able to recognize and evaluate demanding technical and scientific tasks and problems in mechatronics and information technology and to formulate approaches to solve them.
- 2. master demanding scientific methods of their discipline and have learned to use them to analyze identified problems or subject-related issues according to the state of their knowledge.
- 3. possess in-depth knowledge in a combination of the core competences of mechatronics and information technology (e.g. automation and control technology, electrical energy systems, high-voltage technology, electrical drives, power electronics, digital technology, information technology, digital signal processing, communications engineering, highfrequency technology, measurement technology, imaging techniques, lighting technology, optoelectronics, circuitry, microelectronics, optical communication systems, materials science, construction and product development, engineering mechanics, robotics, modern software techniques).

Research and problem-solving skills

The graduates of the Master's degree program Mechatronics and Information Technology

- 1. are qualified to work as engineers and scientists in one of the main application fields of mechatronics and information technology (e.g. Automotive Engineering, Power Engineering, Automation Technology, Industrial Handling, Microsystems Technology, Medical Technology).
- 2. are familiar with the procedures for the analysis and design of components, circuits, systems, and equipment in mechatronics.
- 3. are familiar with advanced methods of presenting and processing information, programming, algorithmic formulation of processes, and the use of programming tools.
- 4. possess an in-depth understanding of the methods of mechatronics and information technology.
- 5. are capable of further qualification through a doctorate program (PhD).

Assessment and planning skills

The graduates of the Master's degree program Mechatronics and Information Technology

- 1. can evaluate mechatronic designs based on elements of electrical and mechanical engineering as well as information technology, using various solution alternatives.
- 2. recognize limits of the validity of theories and solutions in a wide variety of applications and new developments.
- 3. can critically question results and transfer solutions to other areas of application.

Personal and social skills

The graduates of the Master's degree program Mechatronics and Information Technology

- 1. are familiar with independent project work as well as interdisciplinary teamwork, are able to grasp the results of others, and are able to communicate their own and team results in writing and orally.
- 2. are able to familiarize themselves independently with new and complex subject areas in technical sciences and their methods.
- 3. are able to work scientifically on research-related problems and develop complex assemblies or systems.

- 4. possess a deeper understanding of applications of mechatronics and information technology in various fields of work, know the limits and dangers involved, and apply their knowledge responsibly and for the benefit of society, taking safety and ecological requirements into account. They actively contribute to the opinion-forming process in society with regard to scientific and technical issues.
- 5. are able to communicate and cooperate with specialists in an interdisciplinary manner.

3.4 Studies and Examination Regulations

https://www.sle.kit.edu/english/vorstudium/master-mechatronics-information-technology.php

4 Field of study structure

Mandatory		
Master's Thesis	30 CR	
General Mechatronics	32 CR	
Field of Specialization		
Interdisciplinary Subject		
Interdisciplinary Qualifications		
Voluntary		
Additional Examinations This field will not influence the calculated grade of its parent.		

4.1 Master's Thesis

Credits 30

Credits 32

Mandatory		
M-ETIT-103253	Master's Thesis	30 CR

4.2 General Mechatronics

Mandatory		
M-ETIT-100374	Control of Linear Multivariable Systems	6 CR
M-ETIT-102734	Materials	5 CR
M-MACH-102718	Product Development – Methods of Product Engineering	6 CR
M-MATH-105831	Numerical Methods	5 CR
M-ETIT-105982	Measurement Technology	5 CR
M-MACH-103205	Engineering Mechanics	5 CR

4.3 Field of Specialization

Credits 35

Field of Specialization (Election: 1 item)	
Field of Specialization: Automotive Engineering	35 CR
Field of Specialization: Power Engineering	35 CR
Field of Specialization: Microsystems Technology	35 CR
Field of Specialization: Medical Technology First usage possible until Mar 31, 2025.	35 CR
Field of Specialization: Industrial Automation	35 CR
Field of Specialization: Control Engineering in Mechatronics	35 CR
Field of Specialization: Robotics	35 CR
Field of Specialization: Design of Mechatronic Systems	35 CR

4.3.1 Field of Specialization: Automotive Engineering

Part of: Field of Specialization

Election notes

In the Field of Specialization "Automotive Engineering" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 5-10 CR for the Complementary Modules.

Please make sure that this number is exactly met or exceeded once. Excess modules will be moved to the Interdisciplinary Subject.

Starting winter term 21/22, "M-ETIT-100514 - Hybride und elektrische Fahrzeuge" will be replaced by "M-ETIT-100532 - Batterien und Brennstoffzellen". The latter is thus omitted in the Complementary Modules.

Students who have already successfully completed "Hybride und elektrische Fahrzeuge", please contact the Program Service Master (master-info@etit.kit.edu) for booking "Batterien und Brennstoffzellen" in the Complementary Modules.

Mandatory		
M-ETIT-100532	Batteries and Fuel Cells	5 CR
M-MACH-100501	Automotive Engineering I	8 CR
M-MACH-100502	Automotive Engineering II	4 CR
M-MACH-102683	Rail Vehicle Technology	4 CR
Internships (Elect	ion: 1 item)	
M-MACH-102695	Motor Vehicle Laboratory	4 CR
M-ETIT-100381	Batteries and Fuel Cells Laboratory	6 CR
M-ETIT-100401	Lab Course Electrical Drives and Power Electronics	6 CR
M-MACH-105725	Seamless Engineering	9 CR
M-MACH-106050	Reliability and Test Engineering	5 CR
Complementary M	Nodules (Election:)	
M-MACH-105800	Drive Train of Mobile Machines	4 CR
M-MACH-103232	Rail System Technology	4 CR
M-ETIT-100377	Battery and Fuel Cells Systems	3 CR
M-MACH-106513	Railway System Digitalisation	4 CR
M-MACH-102700	Dynamics of the Automotive Drive Train	5 CR
M-ETIT-100515	Design of Electrical Machines	5 CR
M-MACH-105288	Handling Characteristics of Motor Vehicles I	4 CR
M-MACH-102703	Vehicle Lightweight Design - Strategies, Concepts, Materials	4 CR
M-MACH-102693	Automotive Vision	6 CR
M-MACH-106515	Vehicle Systems for Urban Mobility	4 CR
M-MACH-105824	Fundamentals in the Development of Commercial Vehicles	4 CR
M-MACH-105289	Principles of Whole Vehicle Engineering I	2 CR
M-MACH-105290	Principles of Whole Vehicle Engineering II	2 CR
M-MACH-106514	Innovation and Project Management in Rail Vehicle Engineering	4 CR
M-INFO-105623	Reinforcement Learning	6 CR

4.3.2 Field of Specialization: Power Engineering

Part of: Field of Specialization

Credits 35

Election notes

In the Field of Specialization "Power Engineering" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 7-10 CR for the Complementary Modules.

Mandatory		
M-ETIT-100572	Power Network	5 CR
M-MACH-102690	Fundamentals of Energy Technology	8 CR
M-ETIT-104567	Power Electronics	6 CR
Internships (Elect	ion: 1 item)	
M-ETIT-100419	Lab Course Electrical Power Engineering	6 CR
M-ETIT-100401	Lab Course Electrical Drives and Power Electronics	6 CR
M-ETIT-100415	Laboratory Information Systems in Power Engineering	6 CR
M-INFO-105955	Practical Course: Smart Energy System Lab	6 CR
M-ETIT-102350	Laboratory Solar Energy	6 CR
M-MACH-105725	Seamless Engineering	9 CR
Complementary M	Aodules (Election:)	
M-ETIT-100532	Batteries and Fuel Cells	5 CR
M-WIWI-100498	Introduction into Energy Economics	5 CR
M-ETIT-105394	Electric Power Transmission & Grid Control neu First usage possible from Apr 01, 2025.	6 CR
M-INFO-106864	Energy Informatics neu	10 CR
M-ETIT-100534	Power Transmission and Power Network Control First usage possible between Apr 01, 2023 and Mar 31, 2025.	5 CR
M-ETIT-100413	Power Systems and Economy	3 CR
M-ETIT-100515	Design of Electrical Machines	5 CR
M-MACH-102707	Fundamentals of Combustion I	4 CR
M-ETIT-106067	Power Electronic Systems in Energy Technology	6 CR
M-MACH-102714	Microenergy Technologies	4 CR
M-ETIT-100513	Photovoltaics	6 CR
M-ETIT-100394	Practical Aspects of Electrical Drives	4 CR
M-INFO-103153	Seminar: Energy Informatics	4 CR
M-ETIT-103447	Seminar Novel Concepts for Solar Energy Harvesting	3 CR
M-ETIT-100524	Solar Energy	6 CR
M-MACH-102388	Thermal Solar Energy	4 CR
M-MACH-102717	Heat and Mass Transfer	4 CR

4.3.3 Field of Specialization: Microsystems Technology

Part of: Field of Specialization

Credits 35

Election notes

In the Field of Specialization "Microsystems Technology" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 7-12 CR for the Complementary Modules.

Mandatory		
M-MACH-100489	BioMEMS - Microsystems Technologies for Life Sciences and Medicine I	4 CR
M-MACH-102691	Introduction to Microsystem Technology I	4 CR
M-MACH-102706	Introduction to Microsystem Technology II	4 CR
M-MACH-100487	Microactuators	4 CR
M-ETIT-100378	Sensors	3 CR
Internships (Elect	ion: 1 item)	
M-ETIT-100451	System-on-Chip Laboratory	6 CR
M-MACH-105479	Practical Training in Basics of Microsystem Technology	4 CR
M-MACH-105725	Seamless Engineering	9 CR
Complementary M	Iodules (Election:)	
M-MACH-105485	Current Topics on BioMEMS	4 CR
M-MACH-100490	BioMEMS - Microsystems Technologies for Life Sciences and Medicine II	4 CR
M-MACH-100491	BioMEMS - Microsystems Technologies for Life Sciences and Medicine III	4 CR
M-MACH-105483	BioMEMS - Microsystemtechnolgy for Life-Science and Medicine IV	4 CR
M-MACH-105484	BioMEMS - Microfludic Chipsystems V	4 CR
M-MACH-105478	Fabrication Processes in Microsystem Technology	4 CR
M-INFO-100895	Information Processing in Sensor Networks	6 CR
M-ETIT-100474	Integrated Systems and Circuits	4 CR
M-MACH-102713	Mechanics in Microtechnology	4 CR
M-MACH-102714	Microenergy Technologies	4 CR
M-MACH-105486	Micro System Simulation	4 CR
M-ETIT-100454	Microsystem Technology	3 CR
M-ETIT-100455	Seminar Embedded Systems	4 CR
M-MACH-105315	System Integration in Micro- and Nanotechnology	4 CR
M-MACH-105316	System Integration in Micro- and Nanotechnology 2	4 CR

4.3.4 Field of Specialization: Medical Technology

Part of: Field of Specialization

Note regarding usage

First usage possible until Mar 31, 2025.

Election notes

In the Field of Specialization "Medical Technology" 35 CR must be selected. Through the compulsory modules there is a remaining number of 11 CR for the Complementary Modules.

Mandatory		
M-MACH-100489	BioMEMS - Microsystems Technologies for Life Sciences and Medicine I	4 CR
M-MACH-102702	Organ Support Systems	4 CR
M-MACH-102720	Principles of Medicine for Engineers	4 CR
M-ETIT-106679	Medical Measurement Technology ^{neu}	6 CR
M-ETIT-100389	Laboratory Biomedical Engineering	6 CR
Complementary M	Nodules (Election:)	
M-INFO-103294	Wearable Robotic Technologies	4 CR
M-MACH-105485	Current Topics on BioMEMS	4 CR
M-ETIT-100549	Bioelectric Signals	3 CR
M-MACH-100490	BioMEMS - Microsystems Technologies for Life Sciences and Medicine II	4 CR
M-MACH-100491	BioMEMS - Microsystems Technologies for Life Sciences and Medicine III	4 CR
M-MACH-105483	BioMEMS - Microsystemtechnolgy for Life-Science and Medicine IV	4 CR
M-MACH-105484	BioMEMS - Microfludic Chipsystems V	4 CR
M-INFO-100725	Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology and Therapy	3 CR
M-INFO-106649	Humanoid Robots - Locomotion and Whole-Body Control	6 CR
M-ETIT-106778	Medical Imaging Technology ^{neu} First usage possible from Apr 01, 2025.	6 CR
M-ETIT-106670	Medical Imaging Technology II First usage possible between Apr 01, 2024 and Mar 31, 2025.	3 CR
M-ETIT-105874	Physiology and Anatomy for Biomedical Engineering	6 CR
M-INFO-106400	Seminar: Assistive robotics and exoskeletons in medical applications	3 CR
M-INFO-102374	Seminar Accessibility - Assistive Technologies for Visually Impaired Persons	3 CR
M-INFO-106504	Simulation and Optimization in Robotics and Biomechanics	6 CR
M-ETIT-100560	Ultrasound Imaging	3 CR

4.3.5 Field of Specialization: Industrial Automation

Part of: Field of Specialization

Election notes

In the Field of Specialization "Industrial Automation" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 8-13 CR for the Complementary Modules.

Mandatory		
M-MACH-105296	Computational Intelligence	4 CR
M-MACH-104984	Material Flow in Logistic Systems	9 CR
M-ETIT-100531	Optimization of Dynamic Systems	5 CR
Internships (Elect	ion: 1 item)	
M-MACH-102699	Laboratory Mechatronics	4 CR
M-ETIT-103448	Laboratory Mechatronic Measurement Systems	6 CR
M-MACH-105725	Seamless Engineering	9 CR
M-MACH-106050	Reliability and Test Engineering	5 CR
Complementary M	Nodules (Election:)	
M-MACH-105108	Automated Manufacturing Systems	8 CR
M-ETIT-106039	Cyber Physical Production Systems	4 CR
M-MACH-105476	Digitalization of Products, Services & Production	4 CR
M-MACH-102688	Elements of Technical Logistics	4 CR
M-MACH-105015	Elements of Technical Logistics incl. Project	6 CR
M-ETIT-103043	Manufacturing Measurement Technology First usage possible until Mar 31, 2025.	3 CR
M-MACH-105281	Information Systems and Supply Chain Management	3 CR
M-ETIT-100367	Information Technology in Industrial Automation Systems	3 CR
M-MACH-105282	IT-Fundamentals of Logistics: Opportunities for Digital Transformation	4 CR
M-ETIT-106789	IT/OT-Security Seminar ^{neu}	4 CR
M-MACH-105968	Artificial Intelligence in Production	8 CR
M-MACH-105298	Logistics and Supply Chain Management	9 CR
M-INFO-100893	Robotics I - Introduction to Robotics First usage possible until Sep 30, 2025.	6 CR
M-MACH-105477	Seminar Data-Mining in Production	3 CR
M-MACH-106468	Control of Mobile Machines	4 CR
M-MACH-105107	Machine Tools and Industrial Handling	8 CR

4.3.6 Field of Specialization: Control Engineering in Mechatronics

Part of: Field of Specialization

Credits 35

Election notes

In the Field of Specialization "Control Engineering in Mechatronics" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 11-16 CR for the Complementary Modules.

Mandatory		
M-INFO-106299	Advanced Artificial Intelligence	6 CR
M-ETIT-100531	Optimization of Dynamic Systems	5 CR
M-ETIT-100361	Distributed Discrete Event Systems	4 CR
Internships (Elect	ion: 1 item)	
M-MACH-106744	Cognitive Automobiles - Laboratory ^{neu}	6 CR
M-ETIT-105467	Control Theory Laboratory	6 CR
M-MACH-105291	Lab Computer-Aided Methods for Measurement and Control	4 CR
M-MACH-105725	Seamless Engineering	9 CR
M-MACH-106050	Reliability and Test Engineering	5 CR
Complementary M	Iodules (Election:)	
M-INFO-104460	Deep Learning and Neural Networks	6 CR
M-MACH-105612	Dynamics of Electro-Mechanical Systems	5 CR
M-INFO-105778	Machine Learning - Foundations and Algorithms	6 CR
M-WIWI-105003	Machine Learning 1	5 CR
M-WIWI-105006	Machine Learning 2	5 CR
M-MACH-102694	Machine Dynamics	5 CR
M-MACH-105308	Modern Control Concepts I	4 CR
M-MACH-105313	Modern Control Concepts II	4 CR
M-MACH-105314	Modern Control Concepts III	4 CR
M-ETIT-100371	Nonlinear Control Systems	3 CR
M-ETIT-102310	Optimal Control and Estimation	3 CR
M-ETIT-105468	Physical and Data-Based Modelling	6 CR
M-ETIT-106780	Practical Tools for Control Engineers neu	4 CR
M-ETIT-105915	Control of Power-Electronic Systems	6 CR
M-INFO-105623	Reinforcement Learning	6 CR
M-INFO-100829	Stochastic Information Processing	6 CR

Credits 35

4.3.7 Field of Specialization: Robotics	
Part of: Field of Specialization	

Election notes

In the Field of Specialization "Robotics" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 9-14 CR for the Complementary Modules.

Mandatory		
M-ETIT-100531	Optimization of Dynamic Systems	5 CR
M-INFO-100893	Robotics I - Introduction to Robotics	6 CR
M-INFO-102756	Robotics II - Humanoid Robotics	3 CR
M-INFO-104897	Robotics III - Sensors and Perception in Robotics	3 CR
Internships (Elect	ion: 1 item)	
M-INFO-106646	Practical Course: Human-Centred Robotics	6 CR
M-INFO-106648	Practical Course: Movement and Technology	6 CR
M-MACH-105291	Lab Computer-Aided Methods for Measurement and Control	4 CR
M-INFO-102224	Practical Project Robotics and Automation I (Software)	6 CR
M-INFO-102230	Practical Project Robotics and Automation II (Hardware)	6 CR
M-INFO-102522	Robotics - Practical Course	6 CR
M-INFO-105792	Humanoid Robotics Laboratory	6 CR
M-MACH-105725	Seamless Engineering	9 CR
M-ETIT-106633	Signal Processing Lab	6 CR
M-MACH-106050	Reliability and Test Engineering	5 CR
Complementary M	Aodules (Election:)	·
M-INFO-103294	Wearable Robotic Technologies	4 CR
M-INFO-100826	Automated Visual Inspection and Image Processing	6 CR
M-MACH-105296	Computational Intelligence	4 CR
M-MACH-106525	Introduction to Bionics	4 CR
M-ETIT-100453	Hardware/Software Co-Design	4 CR
M-INFO-106649	Humanoid Robots - Locomotion and Whole-Body Control	6 CR
M-INFO-102561	Humanoid Robots - Seminar	3 CR
M-INFO-100791	Innovative Concepts for Programming Industrial Robots	4 CR
M-ETIT-106789	IT/OT-Security Seminar ^{neu}	4 CR
M-INFO-100840	Localization of Mobile Agents	6 CR
M-MACH-101923	Machine Vision	8 CR
M-MACH-106457	Machine Learning for Robotic Systems 1	5 CR
M-MACH-106652	Machine Learning for Robotic Systems 2	5 CR
M-MACH-100487	Microactuators	4 CR
M-INFO-102555	Motion in Human and Machine - Seminar	3 CR
M-ETIT-100371	Nonlinear Control Systems	3 CR
M-INFO-105623	Reinforcement Learning	6 CR
M-INFO-106400	Seminar: Assistive robotics and exoskeletons in medical applications	3 CR
M-INFO-102212	Seminar Intelligent Industrial Robots	3 CR
M-INFO-106504	Simulation and Optimization in Robotics and Biomechanics	6 CR
M-MACH-105348	Control Technology	4 CR

M.Sc. Mechatronics and Information Technology 2015 (Master of S	Science)
Module Handbook as of 05/09/2024	

4.3.8 Field of Specialization: Design of Mechatronic Systems

Part of: Field of Specialization

Credits 35

Election notes

In the Field of Specialization "Design of Mechatronic Systems" 35 CR must be selected. Through the compulsory modules and according to the chosen Internship, there is a remaining number of 6-11 CR for the Complementary Modules.

Mandatory		
M-MACH-105292	Novel Actuators and Sensors	4 CR
M-ETIT-100394	Practical Aspects of Electrical Drives	4 CR
M-ETIT-104475	Project Management in the Development of Products for Safety-Critical Applications	4 CR
M-MACH-105107	Machine Tools and Industrial Handling	8 CR
Internships (Elect	ion: 1 item)	
M-MACH-102705	Appliance and Power Tool Design	8 CR
M-MACH-102699	Laboratory Mechatronics	4 CR
M-MACH-102711	Production Techniques Laboratory	4 CR
M-MACH-105725	Seamless Engineering	9 CR
M-MACH-105475	Virtual Engineering Lab	4 CR
M-MACH-106050	Reliability and Test Engineering	5 CR
Complementary M	Nodules (Election:)	
M-ETIT-106039	Cyber Physical Production Systems	4 CR
M-MACH-105612	Dynamics of Electro-Mechanical Systems	5 CR
M-ETIT-103264	Information Fusion	4 CR
M-MACH-102696	Lightweight Engineering Design	4 CR
M-MACH-105968	Artificial Intelligence in Production	8 CR
M-MACH-102694	Machine Dynamics	5 CR
M-MACH-105332	Quality Management	4 CR
M-ETIT-105915	Control of Power-Electronic Systems	6 CR
M-MACH-106662	Re:Invent - Revolutionary Business Models as the Basis for Product Innovations	4 CR
M-MACH-106468	Control of Mobile Machines	4 CR
M-MACH-105318	Technical Design in Product Development	4 CR
M-INFO-100789	Ubiquitous Computing	5 CR
M-MACH-101283	Virtual Engineering A	9 CR

4.4 Interdisciplinary Subject

Credits 17

Election notes

The modules can be freely chosen by the students from the modules listed below. Other courses of the Master's degree programs in Electrical Engineering and Information Technology, Mechanical Engineering, or Informatics/Computer Science can be chosen after application at the Program Service Master. The chosen modules should fit thematically to the Field of Specialization and at most one practical course and one seminar should be chosen.

Particularly in the case of courses offered by the KIT Department of Informatics, the consent of the lecturer(s) must be obtained before a module is included in the Interdisciplinary Subject. In the process, it must also be clarified whether the students have the necessary subjectspecific prerequisites for the selected module. This matching is the responsibility of the student.

Interdisciplinary	Subject (Election: at least 1 item as well as between 17 and 47 credits)	
M-ETIT-106815	Advanced Communications Engineering ^{neu} First usage possible from Oct 01, 2025.	6 CR
M-MACH-105485	Current Topics on BioMEMS	4 CR
M-ETIT-100444	Applied Information Theory	6 CR
M-ETIT-100565	Antennas and Multiple Antenna Systems First usage possible until Mar 31, 2025.	5 CR
M-MACH-105800	Drive Train of Mobile Machines	4 CR
M-INFO-103294	Wearable Robotic Technologies	4 CR
M-INFO-100826	Automated Visual Inspection and Image Processing	6 CR
M-MACH-105108	Automated Manufacturing Systems	8 CR
M-MACH-103232	Rail System Technology	4 CR
M-ETIT-100377	Battery and Fuel Cells Systems	3 CR
M-ETIT-100532	Batteries and Fuel Cells	5 CR
M-ETIT-100549	Bioelectric Signals	3 CR
M-MACH-100489	BioMEMS - Microsystems Technologies for Life Sciences and Medicine I	4 CR
M-MACH-100490	BioMEMS - Microsystems Technologies for Life Sciences and Medicine II	4 CR
M-MACH-100491	BioMEMS - Microsystems Technologies for Life Sciences and Medicine III	4 CR
M-MACH-105483	BioMEMS - Microsystemtechnolgy for Life-Science and Medicine IV	4 CR
M-MACH-105484	BioMEMS - Microfludic Chipsystems V	4 CR
M-ETIT-105616	Channel Coding: Algebraic Methods for Communications and Storage	3 CR
M-MACH-105296	Computational Intelligence	4 CR
M-ETIT-100539	Communication Systems and Protocols	5 CR
M-ETIT-106039	Cyber Physical Production Systems	4 CR
M-INFO-105753	Deep Learning for Computer Vision I: Basics	3 CR
M-INFO-105755	Deep Learning for Computer Vision II: Advanced Topics	3 CR
M-INFO-104460	Deep Learning and Neural Networks	6 CR
M-ETIT-100466	Analog Circuit Design	4 CR
M-ETIT-100473	Digital Circuit Design	4 CR
M-ETIT-102266	Digital Hardware Design Laboratory	6 CR
M-ETIT-106040	Digital Twin Engineering	4 CR
M-ETIT-105415	Digital Beam-Forming for Imaging Radar	4 CR
M-MACH-106513	Railway System Digitalisation	4 CR
M-MACH-105476	Digitalization of Products, Services & Production	4 CR
M-MACH-102700	Dynamics of the Automotive Drive Train	5 CR
M-MACH-105612	Dynamics of Electro-Mechanical Systems	5 CR
M-ETIT-105916	Real Time Control of Electrical Drives	6 CR
M-WIWI-100498	Introduction into Energy Economics	5 CR
M-ETIT-105394	Electric Power Transmission & Grid Control neu First usage possible from Apr 01, 2025.	6 CR
M-ETIT-100572	Power Network	5 CR
M-MACH-105015	Elements of Technical Logistics incl. Project	6 CR
M-MACH-102688	Elements of Technical Logistics	4 CR
M-ETIT-100419	Lab Course Electrical Power Engineering	6 CR
M-ETIT-100534	Power Transmission and Power Network Control First usage possible until Mar 31, 2025.	5 CR
M-ETIT-100413	Power Systems and Economy	3 CR
M-ETIT-100515	Design of Electrical Machines	5 CR
M-MACH-102702	Organ Support Systems	4 CR
M-MACH-105288	Handling Characteristics of Motor Vehicles I	4 CR

5 Notes on modules and courses

Level indication for the modules

Level 1 = 1st + 2nd semester Bachelor

Level 2 = 3rd + 4th semester Bachelor

Level 3 = 5th + 6th semester Bachelor

Level 4 = Master

Versions of modules and courses

This specification provides information about the currently valid version of the module or the course. A new version is generated, for example, if an adjustment of the CR was carried out in the module or course. You will automatically receive the valid version in your curriculum. If you have already started a module, you can complete the module in the version you have started (grandfathering).

Course type

Describes the type of competence certificate according to the ETIT study and examination regulations § 4. Competence certificates are subdivided into course works or examinations.

Examinations are graded

1. written examinations,

2. oral examinations, or

3. examinations of another type

Course works are ungraded written, oral, or practical achievements that students usually complete during the course.

Events (lectures, exercises, tutorials, seminars)

In the chapter "Courses" the corresponding events of the current and the previous semester are shown in tabular form. For modules that are not offered every semester, you will thus receive complete information on the associated courses.

Registration and admission to module examinations

In order to take module examinations, students must register for the examination online in the student portal.

In exceptional cases, registration may be made in written form at the *Studierendenservice* (Student Services) or at another facility authorized by the *Studierendenservice*. Registration deadlines for the competence certificates may be set by the examiners.

Where elective options exist, students make a binding declaration of module choice when registering for the examination. Upon application of the student to the examination board, the choice or assignment may be changed subsequently. Each module and competence certificate may be assessed only once in the same degree program.

An examination will be passed, if the grade is at least "sufficient" (4.0).

A module will be passed if all required courses are passed.

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

- The students know the relevant elements of a technical cognitive system.
- The students understand the algorithms and methods of AI to model cognitive systems.
- The students are able to understand the different sub-components to develop and analyze a system .
- The students can transfer this knowledge to new applications, as well as analyze and compare different methods.

Content

Due to the successes in research, AI systems are increasingly integrated into our everyday lives. These are, for example, systems that can understand and generate language or analyze images and videos. In addition, AI systems are essential in robotics in order to be able to develop the next generation of intelligent robots.

Based on the knowledge of the lecture "Introduction to AI", the students learn to understand, develop and evaluate these systems.

In order to bring this knowledge closer to the students, the lecture is divided into 4 parts. First, the lecture investigates method of perception using different modalities. The second part deals with advanced methods of learning that go beyond supervised learning. Then methods are discussed that are required for the representation of knowledge in AI systems. Finally, methods that enable AI systems to generate content are presented.

Workload

Lecture with 3 SWS + 1 SWS exercise , 6 CP. 6 LP corresponds to approx. 180 hours, of which approx. 45 hours lecture attendance approx. 15 hours exercise visit approx. 90 hours post-processing and processing of the exercise sheets approx. 30 hours exam preparation

M 7.	2 Moo	dule: Advanced	Communicatio	ns Engine	ering [M-	ETIT-1(06815]	
Responsible:DrIng. Holger JäkelOrganisation:KIT Department of Electrical Engineering and Information TechnologyPart of:Interdisciplinary Subject (Usage from 10/1/2025)

Mandatory								
T-ETIT-113676 Advanced Communications Engineering 6 CR Jäkel			ations Engineering			6 CR	Jäkel	

Competence Certificate

The assessment takes place in the form of a written examination lasting 120 min,

Prerequisites

none

Competence Goal

The students are able to analyze and assess properties of communication systems and consider aspects of implementation. They can use mathematical methods in the context of communication systems for understanding involved derivations in the research literature; deriving and autonomously elaborating theoretical results, and checking their viability by simulations.

Content

The module is introducing and deriving results covering, but not being limited to, properties of linear modulation, channel description and diversity schemes, and processing of receiver signals, all based on detailed theoretical concepts. Topics already covered in previous modules are deduced thoroughly and mathematical derivations and reasoning are provided.

Module grade calculation

The module grade is the grade of the written exam.

Workload

- 1. Attendance to the lecture: 20 * 1,5 h = 30 h
 - 2. Preparation and review: 20 * 3 h = 60 h
 - 3. Attendance to the tutorial: 6 * 1,5 h = 9 h
 - 4. Preparation and review: 6 * 3,5 h = 21 h
 - 5. Preparation for the exam: 60 h

In total: 180 h = 6 LP

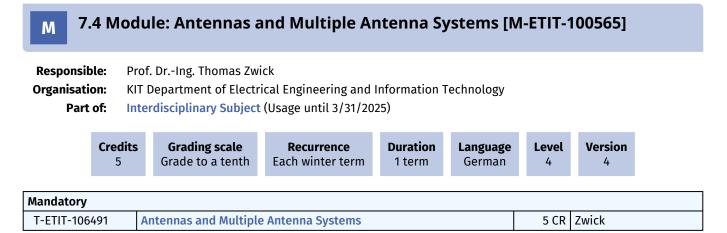

Recommendation

Basics knowledge of communication systems, as, e.g., provided in KIT's Bachelor courses "Grundlagen der Datenübertragung" and "Nachrichtensysteme", is supposed. Furthermore, working knowledge in the areas of system theory and probability theory is assumed.

Learning type

Lecture: 3 SWS, Exercise: 1 SWS

7.3 Module: Analog Circuit Design [M-ETIT-100466]								
Responsible:Prof. Dr. Ivan PericOrganisation:KIT Department of Electrical Engineering and Information TechnologyPart of:Interdisciplinary Subject								
Credits 4Grading scale Grade to a tenthRecurrence Each winter termDuration 1 termLanguage GermanLevel 4Version 1								
Mandatory								
T-ETIT-100	973	Analog Circuit Design				4 CR	Peric	

Competence Certificate

The success control takes place within the framework of an oral overall examination (20 minutes).

Prerequisites

none

Competence Goal

The students have in-depth knowledge of antennas and antenna systems. This includes functionality, calculation methods but also aspects of practical implementation. You will be able to understand how any antenna works and to develop and dimension antennas with specified properties.

Content

The lecture teaches the basics of field theory as well as the functioning of all essential antenna structures. The functionality of antenna arrays is also visualized using Matlab exercises. Furthermore, antenna measurement methods are taught, as well as an insight into modern antenna and multi-antenna systems. In addition, a practice-oriented workshop on computer-aided design and simulation of antennas is carried out, in which the students learn to use the software tool CST and thus carry out antenna design tasks independently. Individual antennas are then set up and measured so that the students get to know the entire process.

Module grade calculation

The module grade is the grade of the oral exam.

Annotation

In winter term 2024/25, the associated lecture will be offered for the last time. Successor modules will be announced.

Workload

The workload includes: Attendance study time lecture / exercise: 30 h Attendance study time computer exercise CST / MATLAB: 30h Self-study time including exam preparation: 90 h A total of 150 h = 5 LP

7.5 Module: Appliance and Power Tool Design [M-MACH-102705]

Responsible :	Prof. DrIng. Sven Matthiesen
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Internships) Interdisciplinary Subject

|--|

Mandatory			
T-MACH-105229	Appliance and Power Tool Design	2 CR	Matthiesen
T-MACH-110767	Appliance and Power Tool Design Project Work This item will not influence the grade calculation of this parent.	6 CR	Matthiesen

Competence Certificate

Approx. 30 min oral examination.

The project work on device technology is examined together with the lecture on device design.

Prerequisites

Due to organizational reasons, the number of participants is limited. At the beginning of august, a registration form will be available at the IPEK website. In the case of too many applicants, a selection process will be taking place. An early application is advantageous.

Competence Goal

The students are able to ...

- analyze complex and contradictory problems regarding the overall system user -machine and hence to create new solutions with focus on customer use.
- list, to identify and to explain strategies and approaches for the design of technical machines, to transfer them on new problems and to evaluate the working results concerning quality, costs and customer use.
- name the impact of specific boundary conditions, e.g. high quantities of mechatronic systems considering the
- customer, on the resulting design, to interpret the consequences and to evaluate the effects in unknown situations.
 name aspects of a successful product engineering in a team of worldwide acting companies regarding the field customer, company and market.
- evaluate their relevance for self-chosen examples and to transfer them on unknown problems.

Content

Operation system, system of objects and system of objectives of mechatronic appliances and power tool designs.

Mode of operation as enabler of design, components of mechatronic systems, application oriented design, guidelines for appliance and power tool design.

Part of the lecture is a project work, in which theory will be reprocessed and presented in a practical way. In such exercises the students also will present their results developed in project teams.

The interaction of analysis and sysnthesis will be acquired in student teams at the example of different appliances and power tools.

Module grade calculation

The module grade consists only of the grade for the lecture Appliance and Power Tool Design.

Annotation

Participation in the course on device design requires simultaneous participation in the project work on device technology. For organisational reasons the number of participants is limited. A registration form will be provided on the IPEK homepage at the beginning of August. If the number of applicants is too large, a selection procedure will take place. This is based on the following selection criteria:

- Students within the course of studies will be decided on the basis of their progress (not only with semesters), which will be determined in a personal interview. The personal selection interviews take place in addition, in order to make the students aware of the special project-oriented format and the time required in correlation with the ECTS points of the course before the final registration for the course.
- With the same study progress after waiting period
- With same waiting time by lot.
- The same procedure is used for students from other courses.

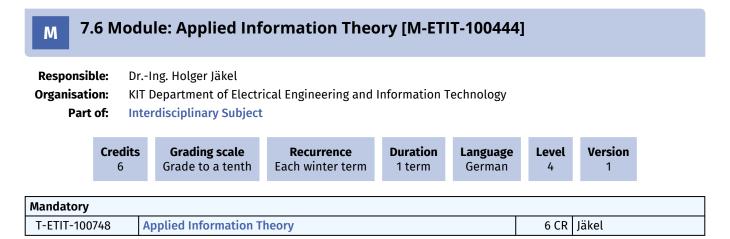

Workload

Lecture Appliance and Power Tool Design: 60 h Appliance and Power Tool Design Project Work: 180 h

Recommendation

None

Learning type Lecture, exercise, project work

Competence Certificate

The success control takes place in the form of an oral examination lasting 25 minutes. Before the examination, there is a preparation phase of 15 minutes in which preparatory tasks are solved.

Prerequisites

none

7.7 Module: Artificial Intelligence in Production [M-MACH-105968]

Responsible :	Prof. DrIng. Jürgen Fleischer
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Industrial Automation (Complementary Modules) Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Complementary Modules) Interdisciplinary Subject

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
8	Grade to a tenth	Each term	2 terms	German	4	1

Mandatory			
T-MACH-112115	Artificial Intelligence in Production	4 CR	Fleischer
T-MACH-112121	Seminar Application of Artificial Intelligence in Production	4 CR	Fleischer

Competence Certificate

T-MACH-112115 - Written Exam (90 min)

T-MACH-112121 - Alternative test achievement (graded)

Competence Goal

The Students understand

- the relevance for the application of artificial intelligence in production and know the main drivers and challenges.
- the CRISP-DM process for implementing AI projects in production.
- the most important methods within the CRISP-DM phases and can theoretically select and practically apply them holistically based on practical issues.

Content

The module AI in Production is designed to teach students the practical, holistic integration of machine learning methods in production. The course is oriented towards the phases of the CRISP-DM process with the aim of developing a deep understanding of the necessary steps and content-related aspects (methods) within the individual phases. In addition to teaching the practical aspects of integrating the most important machine learning methods, the focus is primarily on the necessary steps for data generation and data preparation as well as the implementation and validation of the methods in an industrial environment. The focus of the module is on the practical teaching of the contents, based on production engineering issues. The necessary theoretical basics are taught in the course "Lecture AI in Production". In the course "Project internship Application of AI in Production", practice-relevant architectures of machine learning are used to solve current practical problems in the production environment. The implementation here is also oriented to the phases of the CRISP-DM.

Workload

Artificial Intelligence in Production MACH:

regular attendance: 31,5 hours self-study: 88,5 hours *WING:* regular attendance: 31,5 hours self-study: 118,5 hours

Seminar Application of Artificial Intelligence in Production

regular attendance: 21 hours self-study: 99 hours

7.8 Module: Automated Manufacturing Systems [M-MACH-105108]

Responsible :	Prof. DrIng. Jürgen Fleischer
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Industrial Automation (Complementary Modules) Interdisciplinary Subject

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
8	Grade to a tenth	Each summer term	1 term	German	4	2

Mandatory			
T-MACH-108844	Automated Manufacturing Systems	8 CR	Fleischer

Competence Certificate

oral exam (40 min)

Competence Goal

The students

- are able to analyze implemented automated manufacturing systems and describe their components.
- are capable to assess the implemented examples of implemented automated manufacturing systems and apply them to new problems.
- are able to name automation tasks in manufacturing plants and name the components which are necessary for the implementation of each automation task.
- are capable with respect to a given task to plan the configuration of an automated manufacturing system and to determine the necessary components to its realization.
- are able to design and select components for a given use case of the categories: "Handling Technology", "Industrial Robotics", "Sensory" and "Controls".
- are capable to compare different concepts for multi-machine systems and select a suitable concept for a given use case.

Content

The module gives an overview of the structure and functioning of automated production plants. In a basic chapter, fundamental elements for the realisation of automated production systems are taught. These include:

- Drive and control technology
- Handling technology for handling workpieces and tools
- Industrial robot technology
- Quality assurance in automated production plants
- · Automated machines, cells, centres and systems for production and assembly
- Structures of multi-machine systems
- Project planning of automated production plants

An interdisciplinary view of these sub-areas results in interfaces to Industry 4.0 approaches. The basic chapters are supplemented by practical application examples and live demonstrations in the Karlsruhe Forschungsfabrik.

In the second part of the module, the fundamentals taught will be clarified using practically executed production processes for manufacturing and disassembling components, and the automated production facilities for manufacturing these components will be analyzed. In the field of automotive powertrain technology, the automated production process for both the manufacture and disassembly of batteries is considered. In the powertrain area, automated production facilities for the disassembly of electric motors are considered. Furthermore, automated production systems for the field of additive manufacturing are considered.

Within tutorials, the contents from the module are deepened and applied to concrete problems and tasks.

Workload

1. Presence time lecture/exercise: 15 * 6 h = 90 h

- 2. Pre- and post-processing time lecture/exercise: 15 * 9 h = 135 h
- 3. Exam preparation and presence in the same: 15 h

In total: 240 h = 8 LP

Learning type Lectures, exercise, field trip

Mandatory							
T-MACH-10	0092	Automotive Engineerin	ng l			8 CR	Gauterin, Gieß

Competence Certificate

written exam; duration approximately 2 hours

Prerequisites

Only one out of the two moduls "M-MACH-100501 - Grundlagen der Fahrzeugtechnik I" and "M-MACH-102686 - Automotive Engineering I" is allowed.

Competence Goal

The students know the movements and the forces at the vehicle and are familiar with active and passive security. They have proper knowledge about operation of engines and alternative drives, the necessary transmission between engine and drive wheels and the power distribution, so that they can apply their knowledge effectively in actual practise. They have an overview of the components necessary for the drive and have the basic knowledge, to analyze, to judge and to develop the complex system "vehicle".

Content

The module provides an overview of:

1. History and future of the automobile

2. Driving mechanics: driving resistances and driving performances, mechanics of the longitudinal and transverse forces, passive safety

3. Engines: combustion engine, alternative drives (e.g. electric motor, fuel cell)

4. Transmission: clutches (e.g. friction clutch, visco clutch), transmission (e.g. mechanical transmission, hydraulic fluid transmission)

5. Power transmission and distribution: drive shafts, cardon joints, differentials

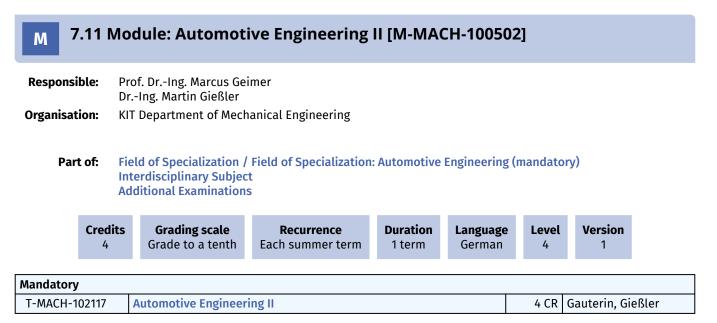

Workload

- 1. regular attendance lecture: 15 * 2 * 2 h = 60 h
- 2. pre and post processing lecture: 15 * 2 * 3 h = 90 h
- 3. examination preparation and presence in examination: 90 h

In total: 240 h = 8 LP

- 3. Gnadler, R.: Script to the lecture 'Automotive Engineering I'

Competence Certificate

Written exam; duration approximately 1,5 h

Prerequisites

none

Competence Goal

The students have an overview of the modules, which are necessary for the road holding of a motor vehicle and the power transmission between vehicle bodywork and roadway. They have knowledge of different wheel suspensions, the tyres, the steering elements and the brakes. They know different execution forms, the function and the influence on the driving or brake behavior. They can apply their knowledge effectively in actual practise. They are able to develop the appropriate components correctly. They are ready to analyze, to judge and to optimize the complex relationship of the different components under consideration of boundary conditions.

Content

The module provides an overview of:

- 1. Chassis: Wheel suspensions (rear axles, front axles, kinematics of axles), tyres, springs, damping devices
- 2. Steering elements: Manual steering, servo steering, steer by wire
- 3. Brakes: Disc brake, drum brake, comparison of the designs

Workload

- 1. regular attendance lecture: 15 * 2 h = 30 h
- 2. pre and postprocessing lecture: 15 * 3 h = 45 h
- 3. examination preparation and presence in examnation: 45 h

In total: 120 h = 4 LP

Competence Certificate

T-MACH-105218

Type of Examination: written exam

Duration of Examination: 60 minutes

Prerequisites

none

Competence Goal

After having participated in th lecture the participants have gained knowledge on modern techniques of signal processing and artificial intelligence which can be used to evaluate video sequences, to relate the image content to a spatial context and to interpret the content semantically. This comprises, binocular reconstruction, recognition of movements in video sequences, state space modeling and Bayesian filters, and the recognition of road surfaces and object behavior. The participants have learned to analyze the algorithms mathematically, to implement them in software, and to apply them to tasks in autonomous driving and mobile robots. The participants are able to analyze problems in the areas mentioned before and to develop appropriate solutions.

Content

Machine perception and interpretation of the environment forms the basis for the generation of intelligent behavior. Especially visual perception opens the door to novel automotive applications. Driver assistance systems already improve safety, comfort and efficiency in vehicles. Yet, several decades of research will be required to achieve an automated behavior with a performance equivalent to a human operator. The lecture addresses students in mechanical engineering and related subjects who intend to get an interdisciplinary knowledge in a state-of-the-art technical domain. Machine vision and advanced information processing techniques are presented to provide a broad overview on seeing vehicles. Application examples from cutting-edge and future driver assistance systems illustrate the discussed subjects. The lecture consists out of 2 hours/week of lecture and 1 hour/week of computer exercises. In the computer exercises methods introduced in the lecture will be implemented in MATLAB and tested experimentally.

Workload 180 hours

composed out of hours of lecture: 15*3 h = 45 h preparation time prior to and after lecture: 15*5 h = 75 h exam preparation and exam: 60 h

Competence Certificate

The assessment consists of an oral or a written exam according to Section 4 (2), 1 or 2 of the examination regulation.

Prerequisites

none

Competence Goal

The student is able to

- · describe and design processes and process networks in intralogistics,
- model and analyse the material flow between processes,
- · describe material flow elements and apply them in a systematic way,
- check material flow elements for their safety.

Content

The aim of this lecture is to give an overview of the three major topics of technical logistics:

- Processes in intralogistic systems
- Technology of technical logistics
- Organization and control of intralogistic processes

Using the example of an intralogistics system, the various topics are presented over the course of the lecture period, so that students are in the end able to understand and describe such an overall system in detail.

Workload

Attendance: 36 hours

Rework: 114 hours

Recommendation

Basics knowledge of technical logistics I is preconditioned

The success control is carried out as part of a written test of 90 minutes.

Bioelectric Signals

Prerequisites

T-ETIT-101956

none

Module grade calculation

The module grade is the grade of the written exam. The submission of the workshop tasks is a prerequisite for taking the written exam. If there is a very good oral discussion of the workshop tasks, 5 points can be earned for each of the two workshop parts (from 100). The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for examinations that may be taken at a later date. The final assessment of the bonus performance is carried out by the examiner and is documented.

Workload

Attendance time lecture: 8 * 1.5h = 12h

Preparation / follow-up lecture: 8 * 1h = 8h

Workshop tasks: 20h + 15h = 35h

Exam preparation and attendance in the same: 35h

Total: 90h

Recommendation

Knowledge of the basics of signal processing and physiology is helpful.

Fundamentals of linear electrical networks, Fourier transformation as well as differential equations and systems of linear equations and numerical solution methods

7.23 Module: Channel Coding: Algebraic Methods for Communications and Μ Storage [M-ETIT-105616]

Prof. Dr.-Ing. Laurent Schmalen **Responsible: Organisation:** KIT Department of Electrical Engineering and Information Technology Part of: **Interdisciplinary Subject**

	Credits 3	Grading scale Grade to a tenth	Recurrence Each summer term	Duration 1 term	Language English	Level 4	Version 1
Mandatory	/						
T-ETIT-11		Channel Coding: Alge Storage	braic Methods for Com	munications	and	3 CR	Schmalen

Competence Certificate

The exam is held as an oral exam of approx. 20 min.

Competence Goal

The students are able to analyse and assess problems of algebraic channel coding. They can apply methods of algebraic coding theory in the context of communication systems for data transmission and data storage and are able to assess their implementation.Additionally, they will get knowledge to current research topics and research results.

Content

This course focuses on the formal and mathematical basics for the design of coding schemes in digital communication systems. These include schemes for data transmission, data storage and networking. The course starts by introducing he necessary fundamentals of algebra which are then used to derive codes for different applications. Besides codes that are important for data transmission appliations, e.g., BCH and Reed-Solomon-Codes, we also investigate codes for the efficient storage and reconstruction of data in distributed systems (locally repairable codes) and codes that increase the throughput in computer networks (network codes). Real applications are always given to discuss practical aspects and implementations of these coding schemes. Many of these applications are illustrated by example code in software (python/MATLAB).

Module grade calculation

Grade of the module corresponds to the grade of the oral exam.

Workload

- 1. Attendance to the lecture: 15 * 2 h = 30 h
- 2. Preparation and review: 15 * 4 h = 60 h
- 3. Preparation for the exam: included in preparation and review
- 4. In total: 90 h = 3 LP

Recommendation

Knowledge of basic engineering as well as basic knowledge of communications engineering.

Previous attendance of the lectures "Communication Engineering I" and "Probability Theory" is recommended.

Prerequisites

none

Competence Goal

T-MACH-105378

After attending the course, participants will be familiar with modern technologies in the field of automated driving and will be able to use them independently. This includes techniques for recording the vehicle environment and vehicle control. Furthermore, students will be able to organize an automation project in a project team and carry it out independently.

Content

The course is designed as an interactive laboratory in which the participants independently develop a technical solution for the automation of a model vehicle. The work is carried out in small groups, which design and implement their technical solution together. At the end of the semester, the technical solution is evaluated as part of a race.

The technical tasks to be solved include

• the development of a camera-based environment detection system

Cognitive Automobiles - Laboratory

- the development of behavior and trajectory planning
- the development of a vehicle control system

The development is carried out in the programming language C++ within the robot control environment ROS (robot operating system).

In addition to solving the technical tasks, each small group must also organize its project collaboration. This includes

- the development of a project plan
- structuring the collaboration within the group
- presenting the interim and final results
- developing a technical concept for solving the task at hand

At the beginning of the course, participants are taught basic knowledge of programming in C++, the robot control environment ROS, software version management and structured programming in software projects in several tutorials.

Module grade calculation

The module grade is the grade of the oral examination of the partial performance.

Annotation

The number of participants is limited to 20. If necessary, a selection procedure will be carried out. Places will be allocated according to prior knowledge. Details will be announced on the course homepage (ILIAS).

Workload

180 hours, of which

Attendance time during the presentations and meetings: 15 h

Follow-up of the content presented in the presentations: 15 h

Independent development of the contents of the lab in the form of research, programming, testing and creating presentations: 135 h

Exam preparation and presentation: 15 h

Recommendation

It is recommended to attend the courses Vehicle Vision or Behavior Generation for Vehicles before or at the same time. Programming skills in C++ are an advantage.

It is recommended to register early for the course.

M 7.25 Module: Communication Systems and Protocols [M-ETIT-100539]

T-ETIT-101938	Communication Systems and Protocols	5 CR	Becker, Becker

Competence Certificate

The examination consists of a written examination of 120 min.

Prerequisites

none

...

Competence Goal

The students are able to:

- · know basic communication systems and to name them
- · categorize different communication systems in regards to possible constraints
- name basic mechanisms of communication systems
- carry out these mechanisms
- choose valid mechanisms suitable under given constraints
- design a communication system adhering to constraints, specifications and be able to choose suitable methods, components, and subsystems
- know current communication systems and know about their properties, mechanisms and application.

Content

The lecture will present the physical and technical basics for the design and construction of communication systems. Procedures and technical implementations for communication between electronic devices are presented. This includes, among other things, modulation methods, line model, arbitration, synchronization mechanisms, error correction mechanisms, multiplexing, communication systems, bus systems and on-chip communication. On the basis of selected practical examples, the application of the lecture contents in real systems is demonstrated.

- Information: Definition, Representation, Communication
- Physics: Media, Signals, Mathmatical Descriptions, Line Coupling & Termination, AD Conversion & Sampling, Line Codes, Modulation
- Data Transmission: Definition & Requirements, Transmission Channels, MultiUse of Channels, Multiplexing, Multiple Senders (Arbitration), Multiple Receivers (Addressing), Classification, Interfaces
- Bus Systems: Definitions, Protocols, Transmission of Dataframes, Classification
- Error Protection: Fundamentals, Errors, Error Detection/Correction: Error Handling
- Topologies: physical, logical, examples
- Networks: networks vs. busses, structure, Network specific topologies, routing, OSI Model, TCP/IP, Ethernet
- Classification of Com.Systems
- · Real World Systems: Automotive Busses, PC Busses, Field Busses, Networks

Module grade calculation

The module grade is the grade of the written exam.

Workload

The workload includes:

- 1. Attendance in 15 lectures an 7 exercises: 33 h
- 2. Preparation / follow-up: 66 h (2 h per unit)
- 3. Preparation of and attendance in examination: 24 h + 2 h

A total of 125 h = 5 LP

T-ETIT-110697 Communications Engineering II 4 CR Jäkel, Schmalen								

The assessment will be carried out in the form of a written exam of 120 minutes.

Prerequisites

none

Competence Goal

The students are able to analyze even more complex problems in communications engineering. You can independently develop and validate solutions and use problem-solving software. The transfer of the learned methods enables the students to quickly grasp other topics and to work on them with the appropriate methodological knowledge.

Content

The course broadens the questions dealt with in the lecture Communication Engineering I. The focus here is on the detailed analysis of known algorithms and the introduction of new methods that were not discussed in the lecture Communications Engineering I, especially in the areas of system and channel modeling, equalization and synchronization.

Module grade calculation

The module grade is the grade of the written exam.

Annotation

Please note: The course "Nachrichtentechnik II" (in German) takes place every summer semester and the English version "Communications Engineering II" takes place every winter semester.

In the future, the module will be divided into an English Master's course (from winter term 25/26: Avanced Communications Engineering) and a German Bachelor's course (from summer term 2025: Nachrichtensysteme II). Both will comprise 6 CP each.

The old examination format can be taken for the last time in the first attempt in winter term 24/25. The last second attempts in SoSe 25.

Workload

1. Attendance Lecture: 15 * 2 h = 30 h

- 2. Preparation / Postprocessing Lecture: 15 * 4 h = 60 h
- 3. Presence Exercise: 15 * 1 h = 15 h
- 4. Preparation / follow-up Exercise: 15 * 2 h = 30 h
- 5. Exam preparation and presence in the same: charged in preparation / follow-up

Total: 135 h = 4 LP

Recommendation

Knowledge of basic engineering mathematics including integral transformations and probability theory as well as basic knowledge of communications engineering.

Previous visit to the lecture "Communications Engineering I", "Probability Theory" and "Signals and Systems" is recommended.

7.27 Module: Communications Engineering Laboratory [M-ETIT-100442]

T-MACH-105314		4 Computational Intelligence					4 CR	Meisenbacl Reischl	her, Mi

Competence Certificate

A performance assessment is obligatory and can be oral, a written exam, or of another kind.

Prerequisites

None

Competence Goal

The students are able to apply the fundamental methods of computational intelligence (fuzzy logic, artificial neural networks, evolutionary algorithms) efficiently. They know the basic mathematical foundations and are able to transfer these methods to practical applications.

Content

- · Terms and definitions Computational Intelligence, application fields and examples
- Fuzzy logic: fuzzy sets; fuzzification and membership functions; inference: T-norms and -conorms, operators, aggregation, activation, accumulation; defuzzification methods, structures for fuzzy control
- Artificial Neural Nets: biology of neurons, Multi-Layer-Perceptrons, Radial-Basis-Function nets, Kohonen maps, training strategies (Backpropagation, Levenberg-Marquardt)
- Evolutionary Algorithms: Basic algorithm, Genetic Algorithms and Evolution Strategies, Evolutionary Algorithm GLEAM, integration of local search strategies, memetic algorithms, application examples
- Deep Learning: History, Architectures, Training strategies, Interpretability and Explainable AI, Use Cases

Workload

The work load is about 120 hours, corresponding to 4 credit points.

T-MACH-110377	Continuum Mechanics of Solids and Fluids	4 CR	Böhlke, Frohnapfel				
T-MACH-110333	Tutorial Continuum Mechanics of Solids and Fluids	1 CR	Böhlke, Frohnapfel				

Competence Certificate

written exam, 90 min. The tutorials T-MACH-110333 are prerequisites to the exam.

Prerequisites

none

Competence Goal

After having finished this module the students can list principles of continuum mechanics of solids and fluids. They can apply methods of tensor calculus and analysis in the framework of Continuum Mechanics for concrete examples and name numerical concepts for solving problems in modelling solids and/or fluids. Moreover, the students are able to solve problems in modelling solids using commercial software codes.

Content

This module aims to teach students the theoretical and practical aspects of continuum mechanics of solids and liquids. At the beginning there is an introduction to tensor calculus and kinematics. Then the balance equations of mechanics and thermodynamics are treated. The module gives an overview of the material theory of solids and fluids. This also includes the field equations for solids and fluids. Beyond thermomechanical couplings, the module imparts knowledge in dimensional analysis.

M 7.30 Module: Control of Linear Multivariable Systems [M-ETIT-100374]									
Responsib Organisati Part	on:	KIT <mark>Ge</mark> r	f. DrIng. Sören Hohn Department of Electri neral Mechatronics erdisciplinary Subject	ical Engineering and I	Information 1	Technology			
	Cree 6		Grading scale Grade to a tenth	Recurrence Each winter term	Duration 1 term	Language German	Level 4	Version 1	
Mandatory									
T-ETIT-100666 Control of Linear Multivariable Systems 6 CR Kluwe									

Success is checked as part of a written overall test (120 minutes) of the course.

Prerequisites

none

Competence Goal

- The students first acquired basic knowledge of the various forms of description of linear multivariable systems in the frequency and time domain with both time-continuous and time-discrete models.

- In particular, they are able to transform multi-size systems in the state space to different normal forms depending on the requirements.

- The students have an understanding of fundamental properties such as Stability, trajectory profiles, controllability and observability as well as pole / zero configuration are achieved and the systems can analyze them accordingly.

- You master the basic principles for controlling linear multi-variable systems both in the frequency domain (series decoupling) and in the time domain (pole specification with pre-filter)

- In concrete terms, the students are familiar with the design procedures modal control, decoupling control in the time domain and the complete modal synthesis.

- You are familiar with the problem of state quantity determination by state observers and the design of complete and reduced observers.

- Students are able to use advanced concepts such as output feedback and dynamic controllers if necessary.

- You can continue to counter the problems of high model orders in the state space by reducing the order based on the dominance analysis.

Content

The aim is to impart basic and advanced methods for the treatment of linear multi-size systems, the focus being on the state space. In this way, the students are introduced to a model that allows more modern and, in particular, non-linear processes. On the one hand, the module provides a comprehensive overview of the most important aspects in the variable description of the systems and the analysis of their characteristic properties. On the other hand, all facets of the synthesis of regulations for initial and permanent disorders and the observers often required for this are conveyed.

Module grade calculation

The module grade is the grade of the written exam.

Workload

The workload includes: Attendance time in lecture / exercise (3 + 1 SWS: 60h = 2 CP) Preparation / follow-up lecture / exercise (90h = 3 CP) Preparation / attendance time written exam (30h = 1 CP)

Recommendation

For a deeper understanding, basic knowledge of system dynamics and control technology is absolutely necessary, as taught in the ETIT Bachelor module "System Dynamics and Control Technology" M-ETIT-102181.

7.31 Module: Control of Mobile Machines [M-MACH-106468]

Responsible:	Prof. DrIng. Marcus Geimer
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Industrial Automation (Complementary Modules) Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Complementary Modules) Interdisciplinary Subject

T-MACH-1	11820	Control of Mobile Ma	chines – Prerequisites			0 CR	Becker, Gein
T-MACH-1	11821	Control of Mobile Ma	chines			4 CR	Becker, Gein

Competence Certificate

oral exam

Prerequisites

Programming skills

Competence Goal

Students learn the theoretical principles of data communication and the architecture of control systems in mobile machinery. They will also be able to identify influences and general conditions in use and derive practical and legal requirements for sensors and control systems. The students learn methods of machine learning for control and regulation tasks in mobile machines as well as their structure and the handling of training data. After participating in the exercise, they will be able to implement, train and validate a control system for a task.

Content

- Basics of sensors, controllers and control architectures in mobile machinery.
- Basics and functionalities of data communication in mobile machines (CAN-Bus, PROFIBUS, Ethernet, ...)
- Legal basis and general conditions (SIL level, ...)
- Requirements for sensors when used in mobile machines for different control tasks Introduction to machine learning methods and their application for the control of mobile machines
- · Overview of current research and developments in the field of agricultural robotics
- Practical implementation of the lecture content by working on an assignment in the associated exercise.
- The results of the assignment will be summarized in a short report as a pre-requisite for the exam.

Module grade calculation

The module grade corresponds to the grade of the oral examination from T-MACH-111821 "Control of mobile machines".

Annotation

Basic knowledge of electrical engineering and computer science is recommended. First programming skills, preferably in Python, are necessary. The number of participants is limited, as hardware will be provided for the exercise. Prior registration is required, details will be announced on the web pages of the Institute of Vehicle Systems Engineering / Department of Mobile Machinery. In case of high registration numbers exceeding the capacities, a selection among all interested persons will take place according to qualification.

Workload

Written Exam (60 min)

Prerequisites None

Competence Goal

The students ...

- are able to name the electrical controls which occur in the industrial environment and explain their function.
- can explain fundamental methods of signal processing. This involves in particular several coding methods, error protection methods and analog to digital conversion.
- are able to choose and to dimension control components, including sensors and actors, for an industrial application, particularly in the field of plant engineering and machine tools. Thereby, they can consider both, technical and economical issues.
- can describe the approach for projecting and writing software programs for a programmable logic control named Simatic S7 from Siemens. Thereby they can name several programming languages of the IEC 1131.

Content

The module control technology gives an integral overview of available control components within the field of industrial production systems.

The first part of the module deals with the fundamentals of signal processing and with control peripherals in the form of sensors and actors which are used in production systems for the detection and manipulation of process states.

The second part handles with the function of electric control systems in the production environment. The main focus in this chapter is laid on programmable logic controls, computerized numerical controls and robot controls. Finally the module ends with the topic of cross-linking and decentralization with the help of bus systems.

The module is very practice-oriented and illustrated with numerous examples from different branches.

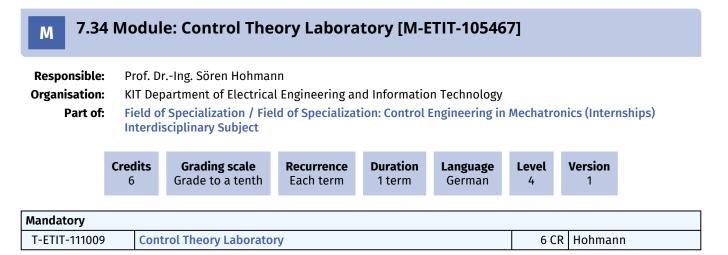

The following topics will be covered:

- Signal processing
- Control peripherals
- Programmable logic controls
- Numerical controls
- Controls for industrial robots
- Distributed control systems
- Field bus
- · Trends in the area of control technology

Competence Certificate

The examination takes place within the framework of an oral overall examination (20 minutes).

Cyber Physical Production Systems

Prerequisites

T-ETIT-112223

none

Competence Goal

- The students are familiar with the aspects of Industrie 4.0 and the associated cyber-physical production systems.
- Students will be able to network machines and industrial control systems with each other.
- Students understand the need for advanced methods and services in the field of industrial automation.
- Students are able to model mechatronic production systems and form digital assets.
- Students are able to validate different information models and ontologies for their applicability.
- Students will be able to model data, information and knowledge or extract them from existing systems.
- Students are able to apply artificial intelligence methods in the domain of systems engineering.
- Students are able to conceptualize the networking of machines.
- The students know suitable modeling tools and their application.

Content

- This module is designed to teach students the theoretical and practical aspects of Industrie 4.0.
- This module further provides a definition of the asset admibistration shell as well as other information models in industrial application.
 - AutomationML
 - Petri nets
 - PLCOpenXML
- Aspects of Cyper Physical Production Systems will be covered as well as their networking in the Industrial Internet of Things.
- Students will learn common IoT protocols such as OPC UA and MQTT.
- The module aims to provide students with an understanding of the basic principles and limitations of artificial intelligence in industrial automation technology.
- · The module shows the relevance of the digital twin and the information modeling behind it.
- The module teaches the aspects of the Semantic Web including ontologies and RDF.
- The students learn formal description languages of automation technology.
- The students learn the aspects of the reliability of networked automation systems regarding functional and IT security.
- The module teaches advanced methods of software engineering and architectures for automation technology.

Module grade calculation

The module grade is the grade of the oral exam.

Workload

The workload includes:

- 1. attendance in lectures an exercises: 15*2 h = 30 h
- 2. preparation / follow-up: 15*4 h = 60 h
- 3. Preparation of the CPS-Demos: 30 h
- 4. preparation of and attendance in the final presentation: included in preparation and follow-up.

A total of 120 h = 4 CR

Recommendation

Enjoyment and interest in industrial production and automation. Fun with digitalization and virtual engineering in particular. No inhibitions about software and data models.

M 7.37 Module: Deep Learning and Neural Networks [M-INFO-104460] Responsible: Prof. Dr. Jan Niehues Organisation: KIT Department of Informatics Part of: Field of Specialization / Field of Specialization: Control Engineering in Mechatronics (Complementary Modules) Interdisciplinary Subject

Mandat							

Competence Goal

Students should be able to grasp the underlying concepts in the field of deep learning and its various applications.

- Understand the theoretical basis of deep learning
- Understand the Convolutional Neural Networks (CNN)
- Develop basis for the concepts and algorithms used in building and training the CNNs.
- Able to apply deep learning in different computer vision applications.

Content

In recent years tremendous progress has been made in analysing and understanding image and video content. The dominant approach in Computer Vision today are deep learning approaches, in particular the usage of Convolutional Neural Networks.

The lecture introduces the basics, as well as advanced aspects of deep learning methods and their application for a number of computer vision tasks. The following topics will be addressed in the lecture:

- Introduction to Deep Learning
- Convolutional Neural Networks (CNN): Background
- CNNs: basic architectures and learning algorithms
- Object Recognition with CNN
- Image Segmentation with CNN
- Recurrent Neural Networks
- · Generating image descriptions (Image Captioning)
- · Automatic question answering (Visual Question Answering)
- Generative Adversarial Networks (GAN) and their applications
- Deep Learning platforms and tools

Annotation

The course is partially given in German and English.

T-MACH-105330

Competence Certificate

Oral exam, about 20 minutes

Prerequisites

none

Competence Goal

Students will be able to

• distinguish polymer compounds from other construction materials regarding chemical differences, thermal behaviour and solid conditions.

• discuss main plastics processes regarding advantages and disadvantages of materials selection and part geometry design and to make appropiate selections.

• analyze complex application requirements concerning material impacts on strength and to use the classic dimensioning method specific to the application to evalute the lifetime part strength limit.

- evaluate part tolerances and geometry by appropiate methods considering molding shrinkage, production tolerances, post shrinkage, heat expansion, swelling, elastic and creep deformation.
- design plastic specific joining geometries like snap fits, screw bosses, weld seams and film hinges.

• detect classic molding failures and understand potential causes as well as to reduce the probability of molding failures by defining an optimized design.

• understand benefits and limits of selected simulation tools in the plastic technology discipline (strength, deformation, filling, warpage).

• assess polymer classes and plastic part designs with respect to suitable recycling concepts and ecological consequences.

Content

In module Design with Plastics, students learn the structure and properties of plastics, their processing process and their behaviour under environmental conditions. In addition, they deal with aspects of dimensioning in regard to strength and geometry, discuss design guidelines which are suitable for plastics and see several examples. Furthermore, basics regarding the joining of plastic components, structural foams, supporting simulation tools and trends in plastic technology are shown.

Module grade calculation

The module grade is the grade of the oral exam.

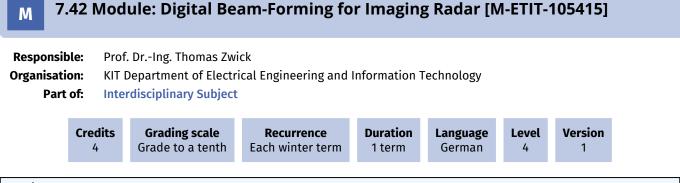

Workload

The workload for the lecture "Design with Plastics" is 120 h per semester and consists of the presence during the lectures (21 h), preparation and rework time at home (50 h) and preparation time for the oral exam (49 h).

Recommendation

Polymerengineering I

Learning type Lectures (Obligatory)

Mandatory			
T-ETIT-110940	Digital Beam-Forming for Imaging Radar	4 CR	Zwick

The examination consists of a written exam (approx. 120 min.) and weekly excercises. The overall impression is rated.

Prerequisites

The lecture builds upon Spaceborne Radar Remote Sensing (engl.). The basic principles will be repeated in the lecture. The following lectures are helpful for a comprehensive understanding: Radar System Engineering (engl.), Antennen und Mehrantennensysteme, Modern Radio System Engineering (engl.).

Competence Goal

Students have a basic knowledge of antenna arrays, radar, multipath propagation and noise. They understand the principle and functionality of beam shaping and the differences between digital, analog and hybrid beam-forming. They know the theory, methods, and algorithms of beam-forming. They can understand how beam-forming is applied to radar. You can explain basic radar system concepts and summarize the various applications.

Content

The lecture is (inherently) interdisciplinary and ideally suited to teach students the combination if signal processing for imaging radar and digital beam-forming. The basic knowledge about antennas & antenna arrays, radar ambiguities and noise is explained in the lecture. This is followed by a details on various beam forming algorithms with reference to imaging radar systems and with application examples from spaceborne synthetic aperture radar (SAR). Aspects such as digital and hybrid beam forming, as well as MIMO and equivalent virtual antenna configuration are explained. Lecture notes (english) are offered to the participants to consolidated the study material.

The lecture is be accompanied by exercises on the lecture material. These are discussed in a room exercise and the associated solutions are presented in detail.

Module grade calculation

The module grade results of the assessment of the written exam and the weekly excercises. Details will be given during the lecture.

Workload

- Attendance time in lectures (1.5 h per 15 dates) and exercises (1.5 h per 7 dates) = 33 h
- Preparation / revision: 15 weeks each 3 h = 45 h
- Exam preparation and presence in the exam: 1 week à 40 h = 40 h
- Total effort approx. 120 hours = 4 LP

Recommendation

Basics of signal processing and radar techniques are useful.

Mandatory							
T-ETIT-104571 Digital Hardware Design Laboratory						6 CR	Becker

Competence Certificate

Control of success is carried out in an oral examination as well as during the laboratory exercises in form of laboratory reports and/or oral interrogations.

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The module M-ETIT-102264 - Digital Hardware Design Laboratory must not have been started.

Competence Goal

The students

- know the practical usage of FPGAs
- are able to efficiently use modern hardware development tools
- know how to describe hardware in VHDL
- · can self dependently draft and implement VHDL-Components based on given specifications
- are able to practically apply common concepts and principles in hardware development (e.g. pipelining)

Content

Grouped in teams of two, the students are introduced to the design of complex hardware/software systems. The laboratory takes place in weekly 4 hour laboratory sessions. During the first few sessions, the students are introduced to the implementation of VHDL-components, the usage of modern synthesis and simulation tools as well as basic knowledge on FPGAs.

Based on those fundamentals, students develop the different components of an image processing system in the second part of the laboratory. This includes implementation and testing steps for the individual components as well as the integration to an overall system. Finally, the hardware system can be realized on FPGA-Hardware and tested with live camera images.

Module grade calculation

The module grade is composed of the result of the oral examination and the effected performance during the laboratory sessions (e.g. reports, oral interrogations, etc.).

Annotation

The module ETIT-102264 ("Praktikum Entwurf digitaler Systeme") must not have been started or completed.

Workload

The amount of work is distributed as follows:

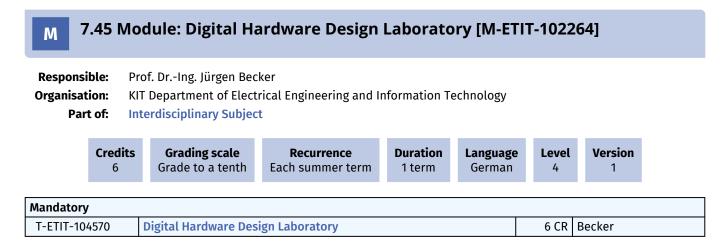

- time of presence during the laboratory sessions: 11 sessions with 4h = 44h
- Preparation and wrap-up: 6h per laboratory session = 66h
- Preparation for the examination: 40h

In total 150h (25h per credit point).

Recommendation

Previous knowledge in design and design automation for electronic systems (e.g. from the lectures HSO, No. 2311619 or HMS, No. 2311608) is recommended.

M.Sc. Mechatronics and Information Technology 2015 (Master of Science) Module Handbook as of 05/09/2024

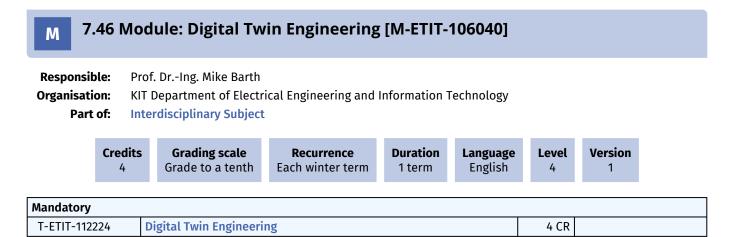

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The module M-ETIT-102266 - Digital Hardware Design Laboratory must not have been started.

The examination takes place in form of other types of examination. It consists of a model library developed in the course of a semester-long project in the modeling language Modelica and a presentation of the library lasting 25 minutes. The quality of the model library is evaluated within the framework of the criteria: documentation, formal correctness, functionality, usability, HMI and modeling level of detail. The presentation is evaluated as an additional aspects. The overall impression is evaluated.

Prerequisites

none

Competence Goal

- The students will be able to analyze, structure and formally describe problems in the area of object-oriented physical system modeling.
- The students will be able to understand, apply and further develop the Modelica modeling language.
- The students are able to transfer bidirectionally acting systems into a model.
- The students are able to transfer physical equations into the modeling environment.
- The students are able to critically evaluate the different numerical integration methods for their applicability and to use them sensibly.
- The students are able to create system models and co-simulations using functional mockup units.
- The students will be able to implement a real system at the appropriate modeling depth for the task.
- The students will be able to abstract real system properties and, if necessary, decide whether they need to be modeled.
- The students know suitable simulation tools and their application.

Content

- This module is designed to provide students with the theoretical and practical aspects of object-theoretic equationbased modeling.
- This module also provides a definition of the digital twin and its aspects of the management shell.
 In this context, a classification of simulation models in the I4.0 VWS takes place.
- Both system simulation in the Open Modelica Editor (OME) and co-simulation with Functional Mockup Units (FMU) will be covered.
- Students create a new model library of a mechatronic system in a semester-long project (teams of 3-4 students).
- The module provides an overview of modern system simulation methods based on bidirectional flow and potential modeling.
- Beyond theoretical and practical modeling, the module imparts the knowledge about practice-relevant modeling levels or depths.
- Furthermore, quality standards for simulation models with focus on the engineering of plants/systems are discussed.

Module grade calculation

The assessment of the developed model library and the presentation of the library will be included in the module grade. More details will be given at the beginning of the course.

Workload

The workload includes:

- 1. attendance in lectures an exercises: 10*1,5 h = 15 h
- 2. preparation / follow-up: 15*2 h = 30 h
- Implementation of the model library: 60 h
 preparation of and attendance in the final presentation: 15 h

A total of 120 h = 4 CR

T-MACH-108491	Digitalization of Products, Services & Production	4 CR Pätzold

Competence Certificate

Alternative exam assessment.

Two presentations in team work and two written compositions.

Prerequisites

None

Competence Goal

Students are able to

- describe the fundamental challenges and objectives of the progressive digitalization of products, service and production. In context of these challenges, students can name and explain the essential terms.
- illustrate the key drivers and fundamental technologies behind the digitalization of products, services and processes.
- describe the challenges of the ongoing digitalization and the corresponding changes in business processes and distinguish between them in regards to time and place. Furthermore, students are able to assign the IT-Architecture and systems to the corresponding process steps.
- highlight the requirement for future information management in networks of product development and production institutions and can clarify how to validated and safeguard the corresponding IT processes.
- to analyze the challenges of digitalization and present potential solution approaches via self-created scenarios for future developments.

Content

- Digitalization of products, services and production in the context of Industry 4.0.
- Key drivers for ongoing digitalization and their impact on future product development and manufacturing.
- Methods and procedures to design the according transformation process.
- Intensive group discussions of use-case scenarios using practical examples from the industry.

The final assessment will be an oral examination (appr. 20 min) taking place during the recess period. The examination will be offered in ervery semester and can be repeated at any regular examination date.

Prerequisites

None

Competence Goal

At the end of the lecture, participants can explain the structure and function of all discussed drive trains of mobile machines. They can analyze complex gearbox schematics and synthesize simple transmission functions using rough calculations.

Content

In this course the different drive trains of mobile machinery will be discussed.

The focus of this course is:

- mechanical gears
- torque converter
- hydrostatic drives
- power split drives
- electrical drives
- hybrid drives
- axles
- terra mechanics

Mandatory							
T-MACH-111260 Dynamics of Electro-Mechanical Systems						5 CR	Altoé, Fidlin

Competence Certificate

Written examination, 120 minutes

Prerequisites

None

Competence Goal

The students are able to describe the dynamical behaviour of electro-mechanical systems using uniform mathematical approach. They are able to analyse interactions between mechanical and electro-mechanical subsystems. They are familiar with the essential retroactive effects, are able to identify them and calculate their impact. The students become acquainted with the basic non-linear effects in the coupled electro-mechanical systems and are able to analyse them by means of appropriate simulation tools.

Content

The lecture conveys two kinds of describing electro-mechanical systems. The first one (described shortly) is based on state and flow variables, the second one (which is in focus of the course) is based on an energetic description and the Lagrange-Maxwell-Formalism. These methods are then applied in order to analyse the most important electro-mechanical systems. These include

- Dynamics of electro-mechanical converter and vibration exciters taking into account the load in resonance operation
- Dynamics of electrical machines taking into account the rotordynamic effects (imbalance, loss of stability, passage through resonance)
- · Dynamics of piezo-electrical converters in sensor and actor operation

Competence Certificate

A performance assessment is an oral exam (approx. 30 minutes).

Prerequisites

none

Competence Goal

After having attended this lecture students will be able to understand typical vibration phenomena in a vehicle powertrain and to simulate the essential components of the vehicle powertrain including components of the engine steering. The method of the simulation-based concept choice and the necessary interaction between OEMs and the delivering industry is part of the taught knowledge. The students will also gain experience in the application of numerical simulation methods for solving practical problems of torsion vibrations in highly non-linear systems.

Content

Lectures: The concept of a simulation- based optimization of the vehicle powertrain and its components. Modelling of the components of the power system including internal-combustion engine, torsional vibration damper (two mass flywheel, centrifugal force pendulum, internal damper/torsion damped clutch disc), hydrodynamical transformer, gear, Kardan wave, differential, wheels, driving manoeuvre and its appraisal incl. start, neutral gear, approach, acceleration drive, load alteration, gear alteration, shearing force, stop, and different special manoeuvres like change of intentions or misuse.

Exercise: Elementary numerical proceedings to simulate nonlinear dynamic systems. Modelling of the powertrain in a simulation environment SimulationX or MapleSim.

Workload

Each credit point is equivalent to 25-30 hours of workload (per student). This refers to an average student who shows an average performance. The workload is as follows:

time of attendance lectures: 30 h

time of attendance exercise: 30h

self-study including exam preparation: 90 h

total 150 h - 5 credit points

Recommendation

Basic knowledge of the powertrain technology and elementary vibration knowledge are advantageous. The lectures refer to the book

H. Dresig, A. Fidlin: Schwingungen Mechanischer Antriebssysteme, 4. Auflage, Springer: Berlin - Heidelberg - New York, 2020, 655 S., ISBN: 978-3-662-59137-6

Especially chapter 6 and 7 are recommended.

Mandatory	,						

T-ETIT-110883	Electric Power Transmission & Grid Control	6 CR	Leibfried

The examination takes place in form of a written examination lasting 120 minutes.

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The module M-ETIT-105394 - Electric Power Transmission & Grid Control must not have been started.

Competence Goal

Students are familiar with the functionality and physical basics as well as the components of AC and DC of electric power transmission systems. They will be able to calculate transmission characteristics and carry out a basic design. They are also familiar with the functioning of grid control.

Content

The lecture initially deals with the characteristics and stability of electrical energy transmission. A central chapter deals with HVDC technology as a method for transmitting high power. FACTS elements, which are used to make energy transmission more flexible, are then dealt with. Finally, the dynamics of power plants and grids are discussed.

Module grade calculation

The module grade is the grade of the written exam.

Workload

The workload includes:

1. attendance in lectures and exercises: 30 + 30 h = 60 h

2. preparation / follow-up: 120 h

A total of 180 h = 6 CR

Recommendation

- Basic Knowledge in electrical network analysis
- · Basic Knowledge about the functionality of electric grid components
- Basic Knowledge about the calculations of three-phase systems
- Basic Knowledge about symmetrical components, Park-transform and Clark-transform

Prerequisites

none

Competence Goal

Introduction to multi-body dynamics: After completing this module, graduates will be able to describe the kinematics of a rigid body using rotational matrices, angular velocities and corresponding derivatives in various reference systems. They can specify holonomic and non-holonomic constraints for closed kinematic chains. In addition, the graduates can derive Newton-Euler's and ie Lagrangian equations and apply the principle of d'Alembert and the principle of virtual power. Finally, they can analyze the structure of the equations of motion.

Engineering Mechanics IV: The graduates can study the kinematics for movements of points and systems. Based on Newton-Euler's axioms they can derive the equations of motion. In addition to classical synthetic methods, graduates can efficiently apply analytical methods with energy expressions as a starting point.

Mathematical methods of continuum mechanics: After completing the module, graduates can perform the essential operations of tensor algebra and tensor analysis for both second and higher-level tensors, in oblique and curvilinear coordinate systems. They can then apply these operations in the description of infinitesimal and finite deformations of continuum mechanical systems. In addition, graduates can specify the transport theorem and balance equations for continuum mechanical systems and use material equations.

Content

Contents of "Introduction to Multi-Body Dynamics": The role of multibody systems in engineering, kinematics of a single rigid body, Kinematics of multibody systems, rotation matrix, angular velocity, derivatives in different reference systems, holonomic and non-holonomic constraints, Newton-Euler's equations, principle of d'Alembert, principle of virtual power, Lagrange's equations, Kane's equations, structure of the equations of motion

Contents of "Engineering Mechanics IV": Spatial kinematics of a rigid body, Euler angles, angular velocity using Euler angles, Euler's equations, inertia tensor, kinetic energy of a rigid body, free gyroscopes, forced gyroscopes, systems of rigid bodies, principle of d'Alembert, Lagrange's equations of the first and second kind, generalized coordinates, free and forced vibration of one degree of freedom systems, frequency response, vibration of multi degree of freedom systems, vibration absorption

Contents of "Mathematical Methods of Continuum Mechanics": Tensor algebra: vectors; Basis transformation; dyadic product; Tensors of second order and their properties, eigenvalue problems, Theorem of Cayley-Hamilton, invariants; Tensors of higher order, tensor analysis: tensor algebra and analysis in oblique coordinate systems, differentiation of tensor-valued functions. Application of tensor calculus in Continuum Mechanics: kinematics of infinitesimal and finite deformations, transport theorem, balance equations, stress tensor, constitutive equations, intial boundary value problems

Workload

Introduction to Multi-Body Dynamics: presence lecture: 15 * 2 h = 30 h, preparation and recap: 15 * 2 h = 30 h, exam preparation and presence during exam: 90 h

Prerequisites

none

Competence Goal

- The students know the characteristics of an industriell working environment.
- They understand the effectiveness of typical structures in companies and the intention of the most relevant business processes.
- They can judge the impact of regulatory framework on their daily work.

Content

1. Organization of Companies

organizational structure, organizational units, managerial structure, organization charts, project organization, relation between superior and staff, board of managing directors, management of the company, supervisory board, advisory board

2. Project Management

definition of project, project manager, project team, primary processes, supporting processes

3. Personnel Development

applications, trainee programs, management career, professional career, career paths in companies, individual career planning, tasks of HR, manpower requirements planning, training, training-on-the-job, tools for human resource management, annual personnel talk, objective agreement

4. Scheduling

Methods for detailed scheduling, network plans, critical path, Gantt-diagram, milestones

5. Development Processes

research, advance development, series development, product marketing, V-model, SPALTEN-model, technical specifications, requirement specifications, clarification, concept, draft, elaboration, validation, verification, documentation, FMEA

6. Standards and Laws

importance of standards, German and international standardization systems, committees, certification 7. Commercial Law

health protection, safety at work, environment protection, product liability, patents

8. **Calculation, Financial Statement** contract award estimate, project costing, unit cost, target costs, cost center accounting, cost recording, hourly rates, asset accounting, profit and loss statement

9. Governance

principles of governance (accountability, responsibility, transparency, fairness), leadership (technical, commercial), reviews, boards, audits, codetermination, compliance

Mandatory								
T-MACH-102166 Fabrication Processes in Microsystem Technology						4 CR	Bade	

Competence Certificate

Oral exam

Prerequisites

none

Competence Goal

Students of the course can

- outline and discuss a self-selected microtechnical process chain for a submitted microtechnical product or tool

- Explain process steps in detail

- Recognize connections between individual process steps

reflect relevant interdisciplinary knowledge from chemistry, engineering and physics

- Describe typical tools (masks, mould inserts) and their production

Content

The lecture offers a specialization in manufacturing technology for structure generation in microtechnology, preferably with large height or high aspect ratio. For this purpose, the lithographic process chain (UV-, X-ray, electron beam, 2-photon lithography) is presented intensively in the first half of the lecture. Starting with typical substrates and resists, resist processing, exposure and development are treated. Micro electroplating is discussed to build metallic microstructures. In the second half of the lecture, production methods for typical tools such as masks and mold inserts are a main focus. Furthermore, newer concepts for micro- and nanostructuring based on self-organisation are presented.

Throughout the lecture the description of the process steps by simple and deeper reaching models at the interface between engineering, chemistry and physics is used for a deeper understanding. The role of recurring ideas, such as the role of mass transfer or kinetic control in the individual process steps, will be taught and simple rules for process control and plant design will be derived. Attention is drawn to similarities and differences with microelectronic manufacturing processes. Special attention is paid to the interactions between different manufacturing steps in the complex process chain with regard to cause-and-effect. The technically important guarantee of homogeneity in the surface and freedom from defects of the process result is discussed by means of some manufacturing steps.

Menz, W., Mohr, J., O. Paul: Mikrosystemtechnik für Ingenieure, VCH-Verlag, Weinheim, 2005

M. Madou Fundamentals of Microfabrication Taylor & Francis Ltd.; Auflage: 3. Auflage. 2011

Type of Examination: oral exam

Duration of Examination: approx. 30 minutes

Modality of Exam: Oral examination, usually one examination day per month during the summer and winter terms. An extra questions-andanswers session will be held for preparation if students wish so.

Prerequisites

none

Competence Goal

Presenting in a unified approach the common background of various problems and questions arising in general optics and optical comunications

The students

- knwo the common properties of counting of modes, density of states and the sampling theorem
- comprehend the relationship between propagation in multimode waveguides, mode coupling, MMI and speckles
- can analyze propagation in homogeneous media with respect to system theory, antennas, and the resolution limit of optical instruments
- · understand that coherence as a general concept comprises coherence in time, in space and in polarisation
- comprehend the implication of complete spatial incoherence, and what is the radiation efficiency of a source with a diameter smaller than a wavelength (the mathematical Hertzian dipole, for instance)
- can assess when can two incandescent bulbs form an interference pattern in time
- know under which conditions a heterodyne radio receiver, which is based on a non-stationary interference, actually works

Content

The following selection of topics will be presented:

- Light waves, modes and rays: Longitudinal and transverse modes, sampling theorem, counting and density of modes ("states")
- Propagation in multimode waveguides. Near-field and far-field. Impulse response and transfer function. Perurations and mode coupling. Multimode interference (MMI) coupler. Modal noise (speckle)
- Propagation in homogeneous media: Resolution limit. Non-paracial and paracial optics. Gaussian beam. ABCD matrix
- Coherence of optical fields: Coherence function and power spectrum. Polarisation, eigenstates and principal states. Measurement of coherence with interferometers (Mach-Zehnder, Michelson). Self-heterodyne and self-homodyne setups

Module grade calculation

The module grade is the grade of the oral exam.

Workload

total 120 h, hereof 45 h contact hours (30 h lecture, 15 h problem class), and 75 h homework and self-studies

Recommendation

Minimal background required: Calculus, differential equations and Fourier transform theory. Electrodynamics and field calculations or a similar course on electrodynamics or optics is recommended.

Competence Goal

The students have proper knowledge about the process of commercial vehicle development starting from the concept and the underlying original idea to the real design. They are able to plan, to steer, and to hanle this process. They can apply their knowledge effectively in actual practise. They know that the customer requirements, the technical realisability, the functionality and the economy are important drivers.

They are able to develop parts and components. Furthermore they have knowledge about different cab concepts, the interior and the interior design process. Consequently they are ready to analyze and to judge concepts of commercial vehicles as well as to participate competently in the commercial vehicle development.

They know the advantages and disadvantages of different drives. Furthermore they are familiar with components, such as transfer box, propeller shaft, powered and non-powered frontaxle etc. Beside other mechanical components, such as chassis, axle suspension and braking system, also electric and electronic systems are known. Consequently the student are able to analyze and to judge the general concepts as well as to adjust them precisely with the area of application. They can apply their knowledge effectively in actual practise.

Competence Certificate

Written exam, graded, approx. 3 h

Prerequisites

none

Competence Goal

After completing the course, the students are able to analyze the functionality of technical combustion systems (e.g. piston engines, gas turbines, furnaces). With regard to environmental pollution, students can name the mechanisms of combustion and pollutant formation and assess concepts for reducing pollutants. They can explain the fundamental chemical and physical processes of combustion and name experimental methods for investigating flames. Furthermore, the students can also describe the differences between laminar and turbulent flames and explain the principles of ignition processes.

Content

The lecture gives an overview of the basic terms and phenomena of technical combustion. In a basic chapter, experimental methods for investigating flames are taught. Conservation equations for laminar flames are derived based on scientific phenomena. In addition, the laminar premixed flame and the laminar non-premixed flame are treated as examples. Knowledge of chemical reactions and their description with reaction mechanisms is conveyed. Furthermore, ignition processes are taught. The content of the lecture is deepened in exercises and applied to specific problems and tasks.

Competence Certificate

A performance assessment will consist of a written examination of 90 minutes.

Prerequisites

none

Competence Goal

The objective of the module is to train the students on state of the art knowledge about the challenging fields of energy industry and the permanent competition between the economical profitability and the long-term sustainability. The students obtain basic knowledge on thermodynamics relevant to the energy sector and comprehensive knowledge on the energy sector: demand, energy types, energy mix, installations for energy production (conventional, nuclear and renewable), transport and energy storage, environmental impact and future tendencies. Students are able to use methods of economic efficiency optimization for the energy sector in a creative way, practice oriented, also specifically trained during the corresponding tutorial. The students are qualified for further training in energy engineering related fields and for (also research-related) professional activity in the energy sector.

Content

The following relevant fields of the energy industry are covered:

- Energy demand and energy situation
- Energy types and energy mix
- Basics. Thermodynamics relevant to the energy sector
- Conventional fossil-fired power plants
- Combined Cycle Power Plants
- Cogeneration
- Nuclear energy
- Regenerative energies: hydropower, wind energy, solar energy, other energy systems
- Energy demand structures. Basics of economic efficiency and calculus. Optimization
- Energy storage
- Transport of energy
- Power generation and environment. Future of the energy industry

Module grade calculation

The module grade is the grade of the written examination.

Workload

1. lectures: 15 * 3 h = 45 h

2. preparation for lectures: 15 * 2 h = 30 h

- 3. tutorials: 15 * 2 h = 30 h
- 4. preparation for tutorials: 15 * 1 h = 15 h
- 5. preparation for exam: 120 h

Total: 240 h = 8 LP

Mandatory								
T-MACH-105152 Handling Characteristics of Motor Vehicles I						4 CR	Unrau	

Competence Certificate

Oral examination, duration: approximately 30 minutes.

Competence Goal

The students know the basic connections between drivers, vehicles and environment. They can build up a vehicle simulation model, with which forces of inertia, aerodynamic forces and tyre forces as well as the appropriate moments are considered. They have proper knowledge in the area of tyre characteristics, since a special meaning comes to the tire behavior during driving dynamics simulation. Consequently they are ready to analyze the most importent influencing factors on the driving behaviour and to contribute to the optimization of the handling characteristics.

Content

1. Problem definition: Control loop driver - vehicle - environment (e.g. coordinate systems, modes of motion of the car body and the wheels)

2. Simulation models: Creation from motion equations (method according to D'Alembert, method according to Lagrange, programme packages for automatically producing of simulation equations), model for handling characteristics (task, motion equations)

3. Tyre behavior: Basics, dry, wet and winter-smooth roadway

Workload

The total work load for this module is about 120 Hours (4 Credits). The partition of the work load is carried out according to the credit points of the courses of the module. The work load for courses with 4 credit points is about 120 hours

Achievement is examined in the form of a written examination lasting 120 minutes.

Prerequisites

none

Competence Goal

After completing this module, students will be familiar with different hardware description languages and their applications in various abstraction levels. They will gain knowledge of the SPICE Hardware Description Language and become proficient in building and deriving the analog matrix for spice simulation. In the realm of digital design, they will develop a comprehensive understanding of the hardware description language VHDL, encompassing the VHDL Standard and its extensions, such as VHDL 2008, the 9-valued logic, and the VHDL-AMS standard. Furthermore, students will achieve a profound comprehension of simulator principles, particularly the delta cycle model. They will also grasp the fundamentals of fault simulations for testing fabricated circuits and learn to derive test vectors. Additionally, students will acquire an understanding of higher-level hardware construction languages like Chisel and SystemC.

Content

In order to address the complexity of modern chips during development, it is essential to utilize modern hardware description languages. This course offers insights into the various levels of abstraction in these languages. It starts by covering the fundamentals of analog description using SPICE and then progresses through VHDL, VHDL-AMS, and Verilog. Additionally, the course introduces more abstract languages like Chisel and SystemC.

Topics covered in the course are:

- Design Process
- Basics of Modeling and Simulation
- Low Level Modeling
- VHDL
 - VHDL-AMS
 - 9-valued logic
 - Delta cycle simulation
 - Fault simulation
- Verilog
- Chisel
- SystemC

Module grade calculation

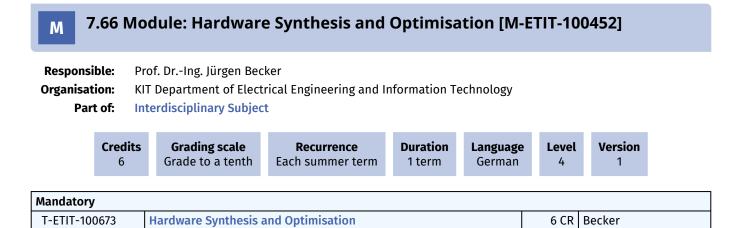

The module grade results from the grade of the written examination.

Workload

The workload is covered by:

- 1. Participating in lectures and tutorials: 33h
- 2. Preparing and wrap up of the above named units: 66h
- 3. Exam preparation and presence: 21h

Sum: 120h = 4 LP

Achievement will be examined in an oral examination (approx. 20 minutes).

Competence Certificate

Written exam, graded, approx. 3 hours

Prerequisites

none

Competence Goal

The students will have knowledge of the basic processes, laws and calculation methods of heat and mass transfer based on dimension analysis. Further, they can use it to analyze and derive application systems of industrial importance in the fields of mechanical engineering, energy and process engineering.

Content

The lecture gives an overview of stationary and unsteady heat conduction phenomena in homogeneous and composite bodies; such as plates, pipe shells and spherical shells. Molecular diffusion in gases and the analogy between diffusion and heat conduction are thought. The lecture provides an overview of convective, forced heat transfer in pipes / channels with a flow, as well as plates and profiles that are flown over. In addition, the module conveys knowledge of the mass / heat transfer analogy and the multiphase, convective heat transfer (condensation, evaporation), as well as the convective mass transfer is taught. This module is intended to convey to students the theoretical and practical aspects of the radiant heat transport of solids and gases. The content of the lecture is deepened in exercises and applied to specific problems and tasks.

Competence Go	al

T-INFO-111590

- Students will be able to independently understand, structure, analyze, and solve a complex humanoid robotics problem using existing programming skills, alone or in a small team.
- · Students can convey complex technical content in a presentation.

Content

In this practical course, a is worked on alone or in small teams with up to 3 students. Questions of humanoid robotics are dealt with, such as semantic scene interpretation, active perception, planning of grasping and manipulation tasks, action representation with motion primitives, and programming by demonstration.

The project work (alone or in groups) is performed largely independently but supported by scientific staff of the H2T. At the end of the practical course, the work has to be documented and presented in a scientific talk.

Annotation

- Internship dates are always by arrangement with the supervising staff member.
- An extension work of the topic as a master thesis is possible in principle.
- The number of participants in this practical course is generally **limited** and varies with the number of available research projects at the institute.

Workload

Practical course with 4 SWS, 6 LP.

6 LP corresponds to ca. 180 hours, thereof

ca. 10h Attendance time in project discussion meetings

ca. 10h Preparation and follow-up of the above

ca. 150h Self-study to work on the topic

ca. 10h Preparation and giving of a scientific presentation

Recommendation

- Very good programming skills in at least one high-level programming language are strongly recommended.
- Attendance of the lectures Robotics 1, Robotics 2, Robotics 3, as well as the robotics practical course are recommended.
- Project-specific recommendations (knowledge of C++, Python, ...) will be announced in the individual project descriptions

M 7.73 Module: Humanoid Robots - Locomotion and Whole-Body Control [M-INFO-106649]

T-INFO-113395	Humanoid Robots - Locomotion and Whole-Body Control	6 CR	Mombaur

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

By the end of the course, students will be able to:

- Develop kinematic and dynamic models of humanoid robots
- · Understand basic principles of human whole-body movement
- Control gaits and other whole-body motions for humanoid robots and maintain balance
- Explain advanced methods for humanoid motion generation, optimization, and learning
- · Give an overview of the state of the art in locomotion and whole-body control of humanoid robotics
- Complete a graduate level research project on humanoid robots including simulation and real-robot implementation

Content

This course introduces fundamentals and recent developments in the field of humanoid robotics with a focus on locomotion and whole-body motions. We will cover kinematic and dynamic modeling of anthropomorphic systems, basic concepts of bipedal walking control, stability aspects, gait generation in different terrains, humanoid balance and push recovery, motion primitives and optimal control-based approaches, motion imitation and learning. The course will also give some insights in basic principles of passive dynamic walking, human motion generation and control and human motion modeling. Students will work with different robotics tools and perform a graduate level research project related to a whole-body humanoid robot.

This module is complementary to the course "4.290 Robotik II - Humanoide Robotik" which focuses on upper body motions and cognitive architectures while this course focuses on the specific aspects of legged humanoids and whole-body motions. The modules can be taken at the same time.

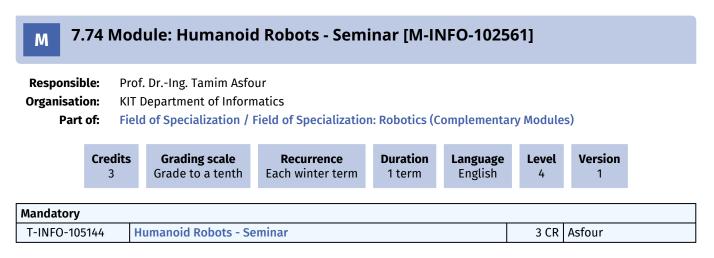

Workload

Estimated effort for this module is 180 hours:

- 60h Lecture and exercises (2+2 SWS)
- 40h Repetition of lecture contents, preparation of assignments
- 80h Work on final project, documentation and presentation

Recommendation

Attendance of the lectures Robotics I - Introduction to Robotics and Mechano-Informatics in Robotics is required.

See partial Achievements (Teilleistung)

Prerequisites

See partial Achievements (Teilleistung)

Competence Goal

The students choose a topic from the field of humanoid robotics, e.g. robot design, motion generation, perception or learning. They conduct a literature research on this topic under the guidance of a scientific supervisor. At the end of the semester, they present the results and write a term paper in English in the form of a scientific publication.

Students are familiar with the DFG Code of Conduct "Guidelines for Safeguarding Good Scientific Practice" and successfully apply these guidelines in the preparation of their scientific work.

Content

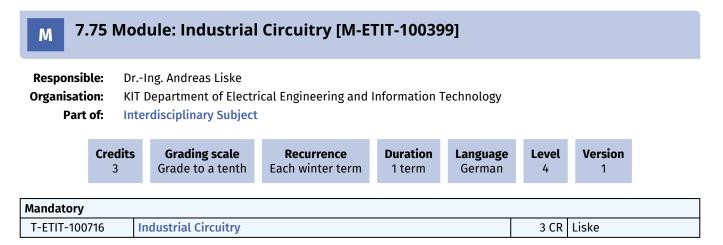

The student gained experience with literature research on a current research topic. He/she explored, understood and compared different approaches to a selected scientific problem. The student is able to write a summary of their literature research in the form of a scientific publication in English and to give a scientific talk on it.

Workload

Seminar with 2 SWS, 3 LP 3 LP corresponds to 90 hours, including 45 hours literature research 25 hours manuscript preparation 10 hours preparation of the presentation 10 hours attendance time

Recommendation

Attending the lectures Robotics I – Introduction to Robotics, Robotics II: Humanoid Robotics, Robotics III – Sensors and Perception in Robotics, Mechano-Informatics and Robotics and Wearable Robotic Technologies is recommended.

Competence Goal

Students will learn the basics of innovation and project management in the context of rail vehicle development. Using the case study of a practical vehicle development in the context of the "European Railway Challenge" competition, students will experience the various organizational, systemic, economic and technological challenges of an innovation project, namely the new construction of a prototype rail vehicle.

Content

- · Basics of innovation management
- Creativity techniques and idea selection
- Basics and methods of project management
- Practical challenges in project management
- Product development processes
- Team organization
- · Case study "innovative rail vehicle" based on the Railway Challenge requirements

Competence Certificate

Alternative test achievement (graded):

- Result of the project work and final presentation with weighting 65%

- Oral exam (ca. 15 min) with weighting 35%

Competence Goal

The students ...

- can develop ideas for technical solutions in the environment of production plants in a team and evaluate their feasibility according to technical and economic criteria,
- are capable of selecting the essential components and modules of a production plant and carrying out the necessary calculations,
- can use FEM simulations to predict and evaluate the static and dynamic behavior of an assembly,
- are able to present, plan and assess their own work and decision-making processes,
- are able to apply basic methods of project management in an international environment.

Content

The module "International Production Engineering" offers a practical insight into the development of production plants in an international environment. A student team works on a current and concrete problem in the field of production engineering, which is introduced into the project by an industrial partner who is operating as well in Germany as in China.

As part of the course "International Production Engineering A", the problem will initially be transferred into work packages. According to the elaborated project plan, ideas and concepts for a solution of the problem will be generated and developed. Based on the concepts, the selected solution approach is elaborated and validated, e.g. through simulation, programming and/or design, but always in the context of production technology. The practical implementation of the developed solution is part of the course "International Production Engineering B" during an eight-week research stay in China.

The project will be carried out by the students under the guidance of scientific staff and in cooperation with the industrial partner. The results of the project will be presented and discussed with the project partner in a final presentation (respectively IPE A and B).

More details about the course are discussed in an information event (always in January/February, the exact date is published on the homepage: www.wbk.kit.edu).

The project offers students ...

- the unique opportunity to put the contents of the accompanying lecture into practice in an interdisciplinary and creative context,
- · to gain insights into a wide range of development activities relevant for their future careers,
- · cooperation with an attractive industrial partner,
- · work in a team with other students with competent support from scientific staff,
- · first practical experience in project management
- international practical experience.

Competence Certificate

The successfull attandence of the lecture is controlled by a written examination.

Prerequisites

Basic knowledge in physics and chemistry

Competence Goal

The students should be able analyze, judge, plan and develop biomimetic strategies and products.

Content

Bionics focuses on the design of technical products following the example of nature. For this purpose we have to learn from nature and to understand its basic design rules. Therefore, the lecture focuses on the analysis of the fascinating effects used by many plants and animals. Possible implementations into technical products are discussed in the end.

Module grade calculation

The module grade corresponds to the grade of the partial performance.

Workload 30 h attendance time

90 h self-study.

Written exam: 60 min

Prerequisites

None

Competence Goal

The lecture gives an introduction into the basics of microsystems technology. In analogy to processes employed in fabrication of microelectronics circuits the core technologies as well as materials for producing microstructures and components are presented. Finally, various techniques for Silicon micromachining are explained and illustrated with examples for micro-components and micro-systems.

Content

- Introduction in Nano- and Microtechnologies
- Silicon and processes for fabricating microelectronics circuits
- Basic physics background and crystal structure
- Materials for micromachining
- Processing technologies for microfabrication
- Silicon micromachining
- Examples

Mandatory			
T-ETIT-113648	IT/OT-Security Seminar	4 CR	Barth

The examination takes place in the form of an oral examination.

Prerequisites

none

Competence Goal

The students:

- know the definitions of terms and use-cases in the IT/OT-Security Domain

- know security requirements of both: the industrial information technology perspecitiv as well as the production related operational technology domain

- can apply basic cryptographic mechanisms with focus on industrial IT networks
- know protection goals of IT/OT-security
- know various aspects of system security (buffer overflow, return-oriented programming, ...)
- can differentiate between classic information technology (IT) and operational technology (OT) in an industrial environment
- are familiar with attacks on industrial automation and control systems (Industrial Control Systems ICS)

- are familiar with various concepts (defense-in-depth, security by design, ...) and specific security mechanisms (Public-Key-Infrastucture, network segmentation, ...) of OT security

- are familiar with current international security standards for ICS, in particular IEC 62443
- know the different roles involved and their challenges in the life cycle of ICS
- know and understand the concept of a risk analysis for security
- can evaluate the quality of security mechanisms and architectures for industrial systems
- know typical industrial communication protocols and can analyze and evaluate their security mechanisms

Content

- Industrial control and automation systems (ICS) are widely used in numerous domains and industries. They play a crucial role in areas such as industrial production, the process industry, critical infrastructures such as energy and water management, building automation and medical devices.

- In recent years, the frequency of vulnerabilities and attacks on these systems has increased, especially since the emergence of Stuxnet in 2014. As a result, the protection of ICS has become increasingly important.

- Compared to conventional IT systems, ICS have different boundary conditions and requirements. In particular, the focus is on availability and maintaining functional safety. Therefore, classic approaches to information security cannot be applied to industrial control systems without adaptation.

- This module first provides basic knowledge of security. Building on this, concepts, mechanisms and standards for the specific domain of ICS are introduced. This includes, for example:

- o Defense-in-Depth concepts
- o Risk-based approaches
- o IEC 62443
- o Structure and operation of cyber security management systems
- o Security engineering
- o Use of security information and event management systems in the industrial environment
- o Secure use of Industry 4.0 technologies such as OPC UA

Module grade calculation

The module grade is the grade of the oral exam.

Workload

The workload includes:

- 1. attendance in seminar lectures and exercises: 12*2 h = 24 h
- 2. preparation / follow-up of seminar lectures: 12*3 h = 36 h
- 3. implementation of challenges and exercises: 12*3 h = 36 h $\,$
- 4. preparation of exam: 24 h.

A total of 120 h = 4 CR

Recommendation

Enjoy working with networked software systems in the production and industrial IT environment. Curiosity in the interplay between attackers and defenders as well as a general affinity to software related topics.

M 7.90 Module: IT-Fundamentals of Logistics: Opportunities for Digital Transformation [M-MACH-105282]

c	Credits 4	Grading scale Grade to a tenth	Recurrence Each summer term	Duration 1 term	Language German	Level 4	Version 2
C Mandatory	Credits	Grading scale	Recurrence		•••		

Competence Certificate

The assessment consists of an oral exam (30 min.) or an written exam (60min.) taking place in the recess period according to § 4 paragraph 2 Nr. 1/2 of the examination regulation.

Prerequisites

none

Competence Goal

The students ...

- can describe the business process models from goods-inbound to goods-outbound based on sound basic knowledge, and derive the corresponding analysis models.
- will learn through the modularisation of the business process elements to think in reusable, adaptive IT components.
- will accomplish excellent work as a highly-motivated employee together in interdisciplinary teams (responses from the industry).

Content

The rapid development of information technology influences business processes drastically.

A strategic IT-orientation for an enterprise without a critical appreciation of worldwide IT-development (where the half-life value of IT for logistic systems knowledge is less than 3 years) is dangerous. The pressure of costs is always in focus. For this purpose the contents of this course, as well as the detailed script will be continuously revised, and the influences on business processes will be shown in practical examples.

Focuses:

System architecture in Material Flow Control Systems (MFCS)

A guiding principle for a new system architecture for MFC systems is the consideration of making new standardized, functional groups available for re-usability.

Design and application of innovative Material Flow Control Systems (MFCS)

The most important task of the MFCS is the commissioning of conveying systems with driving commands in a way that optimally utilizes the facility and serves the logistics processes on schedule.

Identification of goods – Application in Logistics

Along with business processes, coded information is the link between the flow of information and the flow of materials, and contributes to error prevention in the communication between people and machines.

Data communication in Intra-logistics

Information describes the content of a message that is of value to the recipient.

The recipient can be both a human and a machine.

Business processes for Intra-logistics – Software follows function!

If the business processes from Goods Incoming to Goods Outgoing are adapted with reusable building blocks then capabilities become visible. Against this background the consideration becomes apparent, how, through an innovative software architecture,

a reusable building-block based framework can be made.

Therefore applies: Software follows function. And only if all project requirements are documented in the planing phase, and supported together in an inter-disciplinary team - consisting of logistics planners, the customers (users) and the implementation leader (IL).

Software development in accordance with industrial standards

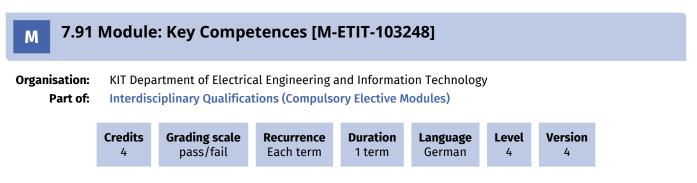

Today's development of object-oriented software, and the increasing penetration of industrial software production with this technology, makes it possible to create system designs that already offer these opportunities in their facility - both for a high degree of reuse and for easier adaptability.

In software development, object-oriented methods are used to improve the productivity, maintainability and software quality. An important aspect of object-orientation is: the objects used are primarily intended to depict the real world.

Workload

regular attendance: 21 hours self-study: 69 hours

Learning type Lectures

Election notes

For self assignment of taken interdisciplinary qualifications of HoC, ZAK or SPZ the courses ('Teilleistungen') with the title 'Self Assignment-HOC-SPZ-ZAK ...' have to be selected according to the grading scale, graded or ungraded. Title and credits of the achievement are adopted.

Students can access the module via the menu item "Exam Registration and Unregistration" at the Study Portal.

T-MACH-105341 Lab Computer-Aided Methods for Measurement and Control	4 CR	Klemp, Stiller
--	------	----------------

Competence Certificate

Successful passed Colloquia

Prerequisites

none

Competence Goal

Powerful and cheap computation resources have led to major changes in the domain of measurement

and control. Engineers in various fields are nowadays confronted with the application of computer-aided methods. This lab tries to give an insight into the modern domain of measurement and control by means of practically oriented and flexible experiments. Based on experiments

on measurement instrumentation and digital signal processing, elementary knowledge in the domain of visual inspection and image processing will be taught. Thereby, commonly used software like MATLAB/Simulink will be used in both simulation and realization of control loops. The lab closes with selected applications, like control of a robot or supersonic computer

tomography.

Content

- 1. Digital technology
 - 2. Digital storage oscilloscope and digital spectrum analyzer
 - 3. Supersonic computer tomography
 - 4. Lighting and image acquisition
 - 5. Digital image processing
 - 6. Image interpretation
 - 7. Control synthesis and simulation
 - 8. Robot: Sensors
 - 9 Robot: Actuating elements and path planning
 - The lab comprises 9 experiments.

Workload

120 hours

Recommendation

Basic studies and preliminary examination; basic lectures in automatic control

Learning type

Tutorial

Literature

Instructions to the experiments are available on the institute's website

T-ETIT-100	728	La	b Course Electrical P	Power Engineering			6 CR	Badent, Dop	

Prerequisites

none

Competence Certificate

The control of success takes place in form of the evaluation of a written report (approx. 10-20 pages) which introduces the topic, discusses the execution of the lab course and the scientific results puts the results into the overall context.

Prerequisites

none

Competence Goal

After successful completion of the module, students will be familiar with elementary processes of microsystems and thinfilm technology and will be able to optimize the fabrication of thin-film structures independently and without external guidance. In addition, they will be able analyze and critically evaluate their results using adequate measuring tools. By working on the practical course in small groups, students also acquire or improve their teamwork skills.

Content

The students learn the basic procedures and processes for the fabrication of integrated circuits as they are also used in industry. After an introduction, they work on specified tasks in the clean room and technology laboratory of the Institute for Micro- and Nanoelectronic Systems and work independently on a set of tasks agreed upon in advance with the supervisor. In detail, the students learn the following methods or processes:

- Fabrication of thin films and multilayer systems by sputtering and thermal vapor deposition.
- Fotolithography
- Characterization of the manufactured devices at room temperature and low temperatures.
- Independent analyses, measurements and evaluations of characteristic quantities of the fabricated structures such as critical temperature, residual resistance ratio, current-voltage characteristics, etc.

The results are subsequently summarized by the students in a final report, put into context and critically discussed.

Module grade calculation

The module grade is the grade of the written report.

Annotation

Two weeks block course in lecture-free time

Workload

A workload of approx. 180h is required for the successful completion of the module. This is composed as follows:

- Preparation of the lab course: 20h
- Discussion and lab course planning with supervisor: 10h
- Attendance time in the lab course: 70h
- Preparation of the written report: 80h

Recommendation

Successful completion of the module M-ETIT-103451 - Thin Films: technology, physics and application I or M-ETIT-105608 - Physics, Technology and Applications of Thin Films is recommended.

Laboratory Mechatronic Measurement Systems	6 CR	Heizmann
	Laboratory Mechatronic Measurement Systems	Laboratory Mechatronic Measurement Systems 6 CR

Competence Certificate

The success control is carried out in the form of a written test of 120 minutes. If there are fewer than 20 candidates, an oral exam of around 20 minutes can alternatively take place. The module grade is the grade of the written or oral exam.

Prerequisites none

none

Competence Goal

- Students have in-depth knowledge of different methods for measuring objects, especially surfaces.
- Students master different procedures for the metrological recording of objects and know the relevant requirements, procedures and results.
- Students are able to implement procedures for evaluating sensor data from (surface) measuring devices and to evaluate the quality of the measurement result.

Content

A large number of different measuring methods and systems can be used for the quality inspection of technically manufactured objects and their surfaces. Examples are white light interferometry, confocal microscopy and systems based on focus variation. The measurement methods and systems naturally differ in terms of the physical measurement principle used, but also in terms of the evaluation of the raw sensor data recorded.

In this internship, different systems for the metrological recording of (technical) surfaces are presented and their properties are characterized. In the test dates, the students themselves create procedures and algorithms for processing the sensor data in order to obtain information about the desired geometric and / or optical properties of the examined surface. The algorithms obtained are evaluated on the basis of sensor data from exemplary objects and characterized in terms of the quality of the measurement statements achieved.

Module grade calculation

The module grade is the grade of the written or oral exam.

Annotation

The submission of the protocols of all experiments is required for admission to the examination. The quality of the protocols is assessed; for the admission to the exam, the quality must be acceptable. Attendance of all laboratory dates including the introductory event is required. Already in the event of a single unexcused absence, admission to the examination will not be granted.

Workload

Total: approx. 160 hours, of which

- 1. Attendance time in introductory session: 1.5 hours
- 2. Preparation of the test dates: 32 h
- 3. Attendance time in test appointments (8 appointments of 4 hours each): 32 hours
- 4. Follow-up of the test dates, Creation of the minutes: 32 h
- 5. Exam preparation and attendance in the same: 60 h

Recommendation

Knowledge from the lectures "Metrology" or "Metrology in Mechatronics" and "Manufacturing Metrology" as well as basic knowledge of programming (e.g. in Matlab, C / C ++) are helpful.

M 7.100 Module: Laboratory Mechatronics [M-MACH-102699] Responsible: Prof. Dr. Veit Hagenmeyer Prof. Dr.-Ing. Wolfgang Seemann Prof. Dr.-Ing. Christoph Stiller Organisation: KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Industrial Automation (Internships) Field of Specialization / Field of Specialization: Design of Mechatronic Systems (Internships) Interdisciplinary Subject

4	pass/fail	Each winter term	1 term	German	4	2

Mandatory			
T-MACH-105370	Laboratory Mechatronics	4 CR	Hagenmeyer, Stiller

Competence Certificate

The laboratory course is offered exclusively as ungraded course work. The assessment consists of a group colloquium at the beginning of the individual specialization phases (Part 1). In addition, a robot control system for a pick-and-place task must be successfully implemented in the group phase (Part 2).

Prerequisites

None

Competence Goal

The students are able to put the knowledge from the specialization in mechatronics and microsystems technology into practice on an exemplary mechatronic system, a handling system. The students can create an automated object recognition, calculate kinematic systems and realize a communication between different systems (PC, CAN, USB).

Furthermore, the students can integrate the individual parts of a manipulator in teamwork to a functioning overall system.

Content

Part I

Control, programming and simulation of robots CAN-Bus communication Image processing / machine vision Dynamic simulation of robots in ADAMS

Part II

In a group work, a kinematic system has to be programmed so that it is able to recognize and grip objects fully automatically.

Module grade calculation

The module is not graded. Passing the module is 100% tied to the performance assessment of the partial performance.

Workload

- 1. Attendance time Lecture: 15 * 2 h = 30h
- 2. self-study: 15 * 6 h = 90h

	Credits	Grading scale	Recurrence	Duration	Language	Level	Version
					German/English		

Mandatory			
T-ETIT-100765	Laboratory Nanotechnology	6 CR	Lemmer

Competence Certificate

Success control takes place in the form of a total of four tests. The overall impression is rated.

Prerequisites

none

Competence Goal

The students have practical experience in the use of measuring devices and manufacturing processes in nanotechnology and the methods for determining the physical and optical properties of optoelectronic components with functional nanotechnology components.

They can evaluate measurement results with regard to their plausibility and assess the influence of the measurement method on the uncertainty of the result.

You will also be able to reproduce the results in written form and interpret the knowledge gained from the measurements scientifically and explain the physical properties and the influence of the nanotechnology components.

Content

This module is designed to teach students the theoretical and practical aspects of laboratory work in the field of nanotechnology by means of independently conducted practical experiments. In the four experiments, students practise working with real measurement technology using the scientific equipment of the institute. The module also teaches students how to write a scientific report and the rules for the meaningful visualization of data sets.

The working titles of the experiments are

- 1. Production and characterization of an OLED
- 2. Optical mask lithography
- 3. Fabrication and characterization of an electrochromic device
- 4. Nanoimprint lithography and scanning electron microscopy

Module grade calculation

Oral examinations and the assessment of written assignments are included in the module grade. Further details will be provided at the beginning of the course.

Workload

Due to the self-administration of the small groups:

1 x 5 h are required for organizational tasks. This includes attending the information event, attending 2 safety briefings (laser and clean room) and making individual appointments between the experiment supervisor and the small group.

The workload for the 4 experiments in the module is calculated as follows:

4 x 5 h familiarization with the topic and literature study on the basics including preparation for the admission test.

4 x 8 h attendance at the institute

- 4 x 10 h data preparation and visualization
- 4 x 16 h Writing an individual report on the basis of the measurement data and the research question for the experiment.
- 4 x 1 h final discussion on the experiment with feedback on the report

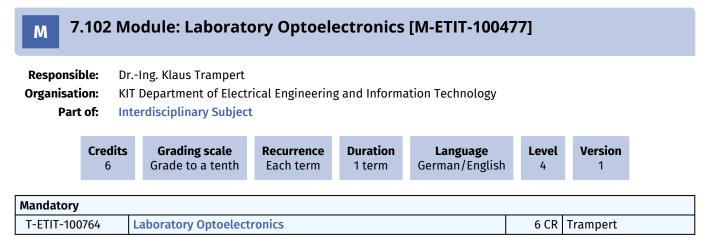

4 x 4 h Improvement of the report based on the feedback on the report

Total hours required = 181 h = 6 CR

Recommendation

Knowledge of the theoretical principles of the individual experiments is helpful. It is advisable to attend the module after attending the subject-relevant courses, as knowledge of the theoretical basics is helpful but not mandatory. If the basics from the corresponding modules are not available, this means a longer preparation time for the respective experiment.

Helpful modules: Solid state electronics

Competence Certificate

Success control takes place in the form of a total of four tests. The overall impression is rated.

Prerequisites

none

Competence Goal

Students have practical experience in using optoelectronic measuring devices and methods for determining the photometric and electrical properties of light sources and their operating devices.

They will be able to assess the plausibility of measurement results and estimate the influence of the measurement method on the uncertainty of the results.

You will also be able to reproduce the results in written form and interpret the knowledge gained from the measurements scientifically and use this to explain the physical properties of the light sources or the control gear.

Content

This module is designed to teach students the theoretical and practical aspects of laboratory work in the field of optoelectronics by means of independently conducted practical experiments. In the four experiments, students practise using real measurement technology on the scientific equipment of the institute. The module also teaches students how to write a scientific report and the rules for the meaningful visualization of data sets.

The working titles of the experiments are

- 1. Operating behavior of fluorescent lamps
- 2. Spectrophotometer | spectral transmission and reflection
- 3. Characterization of organic lasers
- 4. Spectroscopy & photosensor technology.

Module grade calculation

Oral examinations and the assessment of written assignments are included in the module grade. Further details will be provided at the beginning of the course.

Workload

Due to the self-administration of the small groups:

1 x 5 h are required for organizational tasks. This includes attending the information event, attending 2 safety briefings (laser and clean room) and making individual appointments between the experiment supervisor and the small group.

The workload for the 4 experiments in the module is calculated as follows:

4 x 5 h familiarization with the topic and literature study on the basics including preparation for the admission test.

4 x 8 h attendance at the institute

4 x 10 h data preparation and visualization

4 x 16 h Writing an individual report on the basis of the measurement data and the research question for the experiment.

- $4\,x\,1\,h$ final discussion on the experiment with feedback on the report
- 4 x 4 h Improvement of the report based on the feedback on the report

Total hours required = 181 h = 6 CR

Recommendation

Knowledge of the theoretical principles of the individual experiments is helpful. It is advisable to attend the module after attending the subject-relevant courses, as knowledge of the theoretical basics is helpful but not mandatory. If the basics from the corresponding modules are not available, this means a longer preparation time for the respective experiment.

Competence Certificate

Success is assessed on the basis of a total of four experiments. The overall impression is graded.

Prerequisites

none

Competence Goal

Students have practical experience in using photometric measurement equipment and methods for determining the photometric and electrical properties of lamps and luminaires. They also have basic experience in the simulation of luminaires with CAE tools.

They will be able to assess the plausibility of measurement results and estimate the influence of the measurement method on the uncertainty of the result.

They also have the competence to summarise the results in written form and to interpret the knowledge gained from the measurements scientifically and to explain the physical and photometric properties of lamps and luminaires.

Content

This module is designed to teach students the theoretical and practical aspects of laboratory work in the field of solar technology, particularly in the field of photovoltaics, by means of independently conducted practical experiments. In the four experiments, the handling of real measurement technology is trained on the institute's scientific equipment. The module also teaches the skills required to write a scientific report and the rules for the appropriate visualisation of data sets.

The working titles of the experiments are:

- 1. Light Beam Induced Current (LBIC) measurement in solar cells
- 2. Optical and electrical modelling of thin-film solar cells
- 3. Quantum efficiency measurements on solar cells
- 4. Outdoor measurements of PV modules

Module grade calculation

Oral examinations and the assessment of written reports are included in the module grade. Further details will be provided at the beginning of the course.

Workload

Due to the self-administration of the small groups:

1 x 5 h are required for organizational tasks. This includes attending the information event, attending 2 safety briefings (laser and clean room) and making individual appointments between the experiment supervisor and the small group.

The workload for the 4 experiments in the module is calculated as follows:

4 x 5 h familiarization with the topic and literature study on the basics including preparation for the admission test.

4 x 8 h attendance at the institute

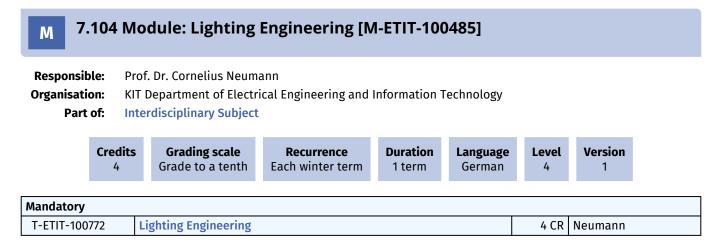

- 4 x 10 h data preparation and visualization
- 4 x 16 h Writing an individual report on the basis of the measurement data and the research question for the experiment.
- 4 x 1 h final discussion on the experiment with feedback on the report

4 x 4 h Improvement of the report based on the feedback on the report

Total hours required = 181 h = 6 CR

Recommendation

Knowledge of the theoretical background of each experiment is recommended. It is strongly recommended that you attend this module after attending the relevant lectures, as knowledge of the theoretical background is important but not strictly necessary.

Competence Certificate

Written examination (90 min)

Prerequisites

none

Competence Goal

The students are able to ...

- evaluate the potential of central lightweight strategies and their application in design processes.
- apply different stiffing methods qualitatively and to evaluate their effectiveness.
- evaluate the potential of computer-aided engineering as well as the related limits and influences on manufacturing.
- reflect the basics of lightweight construction from a system view in the context of the product engineering process.

Content

General aspects of leightweight design, lightweight strategies, construction methods, design principles, lightweight construction, stiffening techniques, lightweight materials, virtual product engineering, bionics, joining techniques, validation, recycling

Additionally, guest speakers from industry will present lightweight design from an practical point of view.

Workload

1. Time of presence lecture: 15 * 2 h = 30 h

Competence Certificate

The assessment consists of a 120 minutes written examination (according to §4(2), 1 of the examination regulation).

Prerequisites None

Competence Goal

The student

- has comprehensive and well-founded knowledge of the central challenges in logistics and supply chain management, an overview of various practical issues and the decision-making requirements and models in supply chains,
- can model supply chains and logistics systems using simple models with sufficient accuracy,
- · identifies cause-effect relationships in supply chains,
- is able to evaluate supply chains and logistics systems based on the methods they have mastered.

Content

Logistics and Supply Chain Management provides comprehensive and well-founded fundamentals for the crucial issues in logistics and supply chain management. Within the scope of the lectures, the interaction of different design elements of supply chains is emphasized. For this purpose, qualitative and quantitative description models are used. Methods for mapping and evaluating logistics systems and supply chains are also covered. The lecture contents are enriched by exercises and case studies and partially the comprehension of the contents is provided by case studies. The interacting of the elements will be shown, among other things, in the supply chain of the automotive industry.

Competence Goal

Students are able to apply engineering-oriented calculation methods in order to model and to understand dynamic effects in rotating machinery. This includes the investigation of runup, stationary operation of rigid rotors including balancing, transient and stationary behavior of flexible rotors, critical speeds, dynamics of slider-crank mechanisms, torsional oscillations.

Content

1. Introduction

2. Machine as mechatronic system

3. Rigid rotors: equations of motion, transient and stationary motion, balancing

Grade to a tenth

4. Flexible rotors: Laval rotor (equations of motion, transient and stationary behavior, critical speed, secondary effects), refined models)

5. Slider-crank mechanisms: kinematics, equations of motion, mass and power balancing

Prerequisites

See partial achivements (Teilleistung)

Competence Goal

- Students acquire knowledge of the basic methods of Machine Learning
- Students acquire the mathematical knowledge to understand the theoretical foundations of Machine Learning
- Students can categorize, formally describe and evaluate methods of Machine Learning

• Students can apply their knowledge to select appropriate models and methods for selected problems in the field of Machine Learning.

Content

The field of Machine Learning has made enormous progress in recent years and good knowledge of Machine Learning is becoming increasingly in demand on the job market. Machine Learning describes the acquisition of knowledge by an artificial system based on experience or data. Rules or certain calculations no longer have to be manually coded but can be extracted from data by intelligent systems.

This lecture provides an overview of essential and current methods of Machine Learning. After reviewing the necessary mathematical background, the lecture primarily deals with algorithms for classification, regression, and density estimation, with a focus on the mathematical understanding of probabilistic methods and neural networks.

Examples of topics include:

- Basics in Linear Algebra, Probability Theory, Optimization and Constraint Optimization
- Linear Regression
- Linear Classification
- Model Selection, Overfitting, and Regularization
- Support Vector Machines
- Kernel Methods
- Bayesian Learning and Gaussian Processes
- Neural Networks
- Dimensionality Reduction
- Density estimation
- Clustering
- Expectation Maximization
- Graphical Models

Workload

The assessment of this course is a written examination (60 min) according to §4(2), 1 of the examination regulation or an oral exam (20 min) following §4, Abs. 2, 2 of the examination regulation.

The exam takes place every semester and can be repeated at every regular examination date.

Prerequisites

None

Competence Goal

- · Students gain knowledge of the basic methods in the field of machine learning.
- Students understand advanced concepts of machine learning and their application.
- Students can classify, formally describe and evaluate methods of machine learning.
- Students can use their knowledge to select suitable models and methods for selected problems in the field of machine learning.

Content

The course prepares students for the rapidly evolving field of machine learning by providing a solid foundation, covering core concepts and techniques to get started in the field. Students delve into different methods in supervised, unsupervised, and reinforcement learning, as well as various model types, ranging from basic linear classifiers to more complex methods, such as deep neural networks. Topics include general learning theory, support vector machines, decision trees, neural network fundamentals, convolutional neural networks, recurrent neural networks, unsupervised learning, reinforcement learning, and Bayesian learning.

The course is accompanied by a corresponding exercise, where students gain hands-on experience by implementing and experimenting with different machine learning algorithms, helping them to apply machine learning algorithms on real world problems.

By the end of the course, students will have acquired a solid foundation in machine learning, enabling them to apply stateof-the-art algorithms to solve complex problems, contribute to research efforts, and explore advanced topics in the field.

Workload

The total workload for this module is approximately 150 hours.

Competence Goal

- · Students gain knowledge of the basic methods in the field of machine learning.
- Students understand advanced concepts of machine learning and their application.
- Students can classify, formally describe and evaluate methods of machine learning.
- Students can use their knowledge to select suitable models and methods for selected problems in the field of machine learning.

Content

The subject area of machine intelligence and, in particular, machine learning, taking into account real challenges of complex application domains, is a rapidly expanding field of knowledge and the subject of numerous research and development projects.

The lecture "Machine Learning 2" deals with modern advanced methods of machine learning such as semi-supervised and active learning, deep neural networks (deep learning, CNNs, GANs, diffusion models, transformer, adversarial attacks) and hierarchical approaches, e.g. reinforcement learning. Another focus is the embedding and application of machine learning methods in real systems.

The lecture introduces the latest basic principles as well as extended basic structures and elucidates previously developed algorithms. The structure and the mode of operation of the methods and methods are presented and explained by means of some application scenarios, especially in the field of technical (sub) autonomous systems (vehicles, robotics, neurorobotics, image processing, etc.).

T-WIWI-113073	Machine Learning and	Optimization in Ener	gy Systems		4 CR	Fichtner

Competence Certificate

The assessment of this module is a written examination (60 min) or an oral exam (30 min) depending on the number of participants.

Prerequisites

None.

Competence Goal

Participants know about the most common optimization and machine learning approaches for the application in energy systems. They understand the basic principles of the methods and are able to apply them for solving important problems of future energy systems with high shares of renewable energy sources.

Content

In the beginning, the essential transition of the energy system into a smart grid and the need for methods from the field of optimization and machine learning are explained. The course can be subdivided into an optimization part and a larger machine learning part. In the optimization part, the basics of optimization approaches that are used in energy systems are shown. Further, heuristic methods and approaches from the field of multiobjective optimization are introduced. In the machine learning part, the most important methods from the field of unsupervised learning, supervised learning and reinforcement learning are introduced and their application in future energy systems are investigated.

Amongst the considered applications are power plant dispatch, intelligent heating with heat pumps, charging strategies for electric vehicles, clustering of energy data for energy system models and electricity demand and renewable generation forecasting.

We also offer a voluntary computer exercise that deepens the understanding of the methods and applications covered in the lecture. The students will have the opportunity to solve problems from the energy domain by using optimization and machine learning approaches implemented in the programming language Python.

The course's general focus is on the application of the methods in the energy field and not on the mathematical details of the different approaches.

Module grade calculation

The module grade is the grade of the written or oral exam.

Workload

The total workload for this module is approximately 120 hours:

7.115 Module: Machine Tools and Industrial Handling [M-MACH-105107]

Responsible :	Prof. DrIng. Jürgen Fleischer
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Industrial Automation (Complementary Modules) Field of Specialization / Field of Specialization: Design of Mechatronic Systems (mandatory) Interdisciplinary Subject

Competence Certificate

Oral exam (40 minutes)

Competence Goal

The students

- are able to assess the use and application of machine tools and high-precision manufacturing systems and to differentiate between them in terms of their characteristics and design.
- can describe and discuss the essential elements of machine tools and high-precision manufacturing systems (frame, main spindle, feed axes, peripheral equipment, control unit).
- are able to select and dimension the essential components of machine tools and high-precision manufacturing systems.
- are capable of selecting and evaluating machine tools and high-precision manufacturing systems according to technical and economic criteria.

Content

The module gives an overview of the construction, use and application of machine tools and high-precision manufacturing systems. In the course of the module a well-founded and practice-oriented knowledge for the selection, design and evaluation of machine tools and high-precision manufacturing systems is conveyed. First, the main components of the systems are systematically explained and their design principles as well as the integral system design are discussed. Subsequently, the use and application of machine tools and high-precision manufacturing systems will be demonstrated using typical machine examples. Based on examples from current research and industrial applications, the latest developments are discussed, especially concerning the implementation of Industry 4.0 and artificial intelligence. Guest lectures from industry round off the module with insights into practice.

The individual topics are:

- Structural components of dynamic manufacturing Systems
- Feed axes: High-precision positioning
- Spindles of cutting machine Tools
- Peripheral Equipment
- Machine control unit
- Metrological Evaluation
- Maintenance strategies and condition Monitoring
- Process Monitoring
- Development process for machine tools and high-precision manufacturing Systems
- Machine examples

Competence Certificate

Type of Examination: written exam Duration of Examination: 60 minutes

Prerequisites

None

Competence Goal

After having participated in th lecture the participants have gained knowledge on modern techniques of machine vision and pattern recognition which can be used to evaluatecamera images. This especially includes techniques in the areas of gray level image analysis, analysis of color images, segementation of images, describing the geometrical relationship between the image and the 3-dimensional world, and pattern recognition with various classification techniques. The participants have learned to analyze the algorithms mathematically, to implement them in software, and to apply them to tasks in video analysis. The participants are able to analyze real-world problems and to develop appropriate solutions.

Content

The lecture on machine vision covers basic techniques of machine vision. It focuses on the following topics:

image preprocessing

edge and corner detection

curve and parameter fitting

color processing

image segmentation

camera optics

pattern recognition

deep learning

Image preprocessing:

The chapter on image processing discusses techniques and algorithms to filter and enhance the image quality. Starting from an analysis of the typical phenomena of digital camera based image capturing the lecture introduces the Fourier transform and the Shannon-Nyquist sampling theorem. Furthermore, it introduces gray level histogram based techniques including high dynamic range imaging. The disussion of image convolution and typical filters for image enhancement concludes the chapter.

Edge and corner detection:

Gray level edges and gray level corners play an important role in machine vision since gray level edges often reveal valueable information about the boundaries and shape of objects. Gray level corners can be used as feature points since they can be identified easily in other images. This chapter introduces filters and algorithms to reveal gray level edges and gray level corners like the Canny edge detector and the Harris corner detector.

Curve and parameter fitting:

In order to describe an image by means of geometric primitives (e.g. lines, circles, ellipses) instead of just pixels robust curve and parameter fitting algorithms are necessary. The lecture introduces and discusses the Hough transform, total least sum of squares parameter fitting as well as robust alternatives (M-estimators, least trimmed sum of squares, RANSAC)

Color processing:

The short chapter on color processing discusses the role of color information in machine vision and introduces various models for color understanding and color representation. It concludes with the topic of color consistency.

Image Segmentation:

Image segmentation belongs to the core techniques of machine vision. The goal of image segmentation is to subdivide the image into several areas. Each area shares common properties, i.e. similar color, similar hatching, or similar semantic interpretation. Various ideas for image segmentation exist which can be used to create more or less complex algorithms. The lecture introduces the most important approaches ranging from the simpler algorithms like region growing, connected components labeling, and morphological operations up to highly flexible and powerful methods like level set approaches and random fields.

<u>Camera optics</u>:

The content of an image is related by the optics of the camera to the 3-dimensional world. In this chapter the lecture introduces optical models that describe the relationship between the world and the image including the pinhole camera model, the thin lens model, telecentric cameras, and catadioptric sensors. Furthermore, the lecture introduces camera calibration methods that can be used to determine the optical mapping of a real camera.

Pattern recognition:

Pattern recognition aims at recognizing semantic information in an image, i.e. not just analyzing gray values or colors of pixels but revealing which kind of object is shown by the pixels. This task goes beyond classical measurement theory and enters the large field of artificial intelligence. Rather than just being developped and optimized by a programmer, the algorithms are adapting themselves to their specific task using training algorithms that are based on large collections of sample images.

The chapter of pattern recognition introduces standard techniques of pattern recognition in the context of image understanding like the support vector machine (SVM), decision trees, ensemble and boosting techniques. It combines those classifiers with powerful feature representation techniques like the histogram of oriented gradients (HOG) features, locally binary patterns (LBP), and Haar features.

Deep learning:

Throughout recent years standard pattern recognition technqiues have more and more been outperformed by deep learning techniques. Deep learning is based on artificial neural networks, a very generic and powerful form of a classifier. The lecture introduces multi layer perceptrons as the most relevant form of artificial neural networks, discusses training algorithms and strategies to achieve powerful classifiers based on deep learning including deep auto encoders, convolutional networks, and multi task learning, among others.

Workload

Part of: Interdisciplinary Subject

Mandatory

· ·····,			
T-MACH-105401	Integrated Product Development	18 CR	Albers

Competence Certificate

oral examination (60 minutes)

Prerequisites

None

Competence Goal

By working practically in experience-based learning arrangements with industrial development tasks, graduates are able to succeed in new and unknown situations when developing innovative products by using methodological and systematic approaches. They can apply and adapt strategies of development and innovation management, technical system analysis and team leadership to the situation. As a result, they are able to foster the development of innovative products in industrial development teams in prominent positions, taking into account social, economic and ethical aspects.

Content

Organizational integration: integrated product development model, core team management and simultaneous engineering, informational integration: innovation management, cost management, quality management and knowledge management

Personal integration: team development and leadership

Guest lectures from the industry

Annotation

The participation in the course "Integrated Product Development" requires the simultaneous participation in the lecture(2145156), the workshop (2145157) and the product development project (2145300).

For organizational reasons, the number of participants for the product development project is limited. Therefore, a selection process will take place. Registration for the selection process is made by means of a registration form, which is available annually from April to July on the homepage of the IPEK. Afterwards the selection itself will be discussed in personal interviews with Professor Albers.

The rule here is:

- Students within the course of studies will be decided on the basis of their progress (not only with semesters), which
 will be determined in a personal interview. The personal selection interviews take place in addition, in order to make
 the students aware of the special project-oriented format and the time required in correlation with the ECTS points
 of the course before the final registration for the course.
- With the same study progress after waiting period
- With same waiting time by lot.
- The same procedure is used for students from other courses.

Workload

The work load is about 480 hours, corresponding to 16 credit points.

Learning type

lecture tutorial product development project

7.118 Module: Manufacturing Measurement Technology [M-ETIT-103043]

Competence Certificate

Success control takes place in the form of a written examination lasting 90 minutes. If there are fewer than 20 candidates, an oral examination lasting approx. 20 minutes may be held as an alternative.

Prerequisites

none

Competence Goal

- Students have a sound knowledge of the fundamentals, methods and procedures for measuring and testing in industrial production.
- Students can assess different measuring principles, methods and devices with regard to their requirements, properties, areas of application and results.
- Students are able to analyze production measurement tasks, derive the resulting requirements for a suitable
 metrological implementation, find suitable metrological implementations and demonstrate the resulting properties
 of the measurement result.

Content

Production Measurement Technology plays a key role in ensuring efficient industrial production. To a certain extent, it represents the sensory organs for quality assurance and automation technology and encompasses all activities associated with measuring and testing.

The lecture teaches procedures and implementations for measuring and testing in industrial practice. The focus is on geometric properties; most of the concepts presented can also be transferred to other properties. Sensor systems for measuring geometric properties are presented and their characteristic properties are discussed.

The contents include in detail

- Fundamentals of Production Measurement Technology
 - Basic terms, definitions
 - Measuring standards
 - Measurement uncertainties
- · Measurement technology in the workshop and in the measuring room
 - Coordinate metrology
 - Form and position measurement technology
 - Surface and contour metrology
 - Comparators
 - Micro and nano metrology
 - Measuring rooms
- Production-oriented metrology
 - Measuring equipment and gauges
 - Measuring devices
 - Measuring in the machine
 - Visual inspection
 - Statistical process control (SPC)
- Optical/non-contact measuring methods
 - Integrable optical sensors
 - Stand-alone optical measuring systems
 - Optical 2.5D coordinate measuring technology
 - Optical 3D coordinate measuring technology
 - Computer tomography
- Test equipment management
 - Controlled test processes
 - Test planning

Module grade calculation

The module grade is the grade of the written or oral examination

Workload

- Total: approx. 90h, of which
- 1. attendance time in lectures: 23h
- 2. preparation and follow-up of lectures: 23h
- 3. exam preparation and attendance: 44h

Recommendation

Knowledge of stochastics and the basics of measurement technology is helpful.

M 7.11	9 M	odu	le: Master's T	hesis [M-ET	TT-10325	3]

Modeled Conditions

The following conditions have to be fulfilled:

- 1. You need to have earned at least 75 credits in the following fields:
 - General Mechatronics
 - Interdisciplinary Subject
 - Interdisciplinary Qualifications
 - Field of Specialization
 - Field of Specialization

Competence Goal

After successful completion of the module, students are able to work independently on a challenging task in the field of mechatronics or information technology within a given period of time using scientific methods and in compliance with the rules of good scientific practice under guidance and by applying the theoretical and methodological knowledge acquired in the Master's program. Students are able to do research, analyze and abstract the information and to compile and recognize basic principles and laws from less structured information. Students are able to get an overview of a problem, select complex scientific methods and procedures and use them to find solutions or show further potentials. In principle, this also takes into account social and/or ethical aspects.

The students are able to interpret and evaluate their results. They are also able to document their results in a clearly structured, written elaboration using the appropriate technical terminology. Furthermore, students are able to present and defend their results in front of a scientific audience. They have also deepened their problem-solving skills and their competence in transferring the theoretical and methodological knowledge of mechatronics and information technology into concrete applications.

In addition to the subject-related qualification goals, the students also gain knowledge and experience in the areas of project management as well as self and time management. This also includes knowledge and methods of various presentation techniques.

Content

The students work independently and with scientific methods on a research topic agreed with the subject examiner, which deals with a problem from the area of the Master's program in Mechatronics and Information Technology.

Module grade calculation

The Master's Thesis is written by at least one university lecturer or one senior scientist according to § 14 para. 3 no. 1 KITG and another examiner. As a rule, one of the examiners is Person who has awarded the work in accordance with paragraph 2. If the assessment of these two people does not match, the examination board determines the grade of the Master's Thesis in the context of the assessment of these two persons; he can too order another appraiser. The assessment must be completed within eight weeks of the submission of the Master's Thesis respectively. Section 14 of the study and examination regulations (SPO) regulates further details.

The module grade consists of the Master's Thesis and a presentation (SPO §14, 1b).

7.120 Module: Material Flow in Logistic Systems [M-MACH-104984] Μ **Responsible:** Prof. Dr.-Ing. Kai Furmans **Organisation:** KIT Department of Mechanical Engineering Part of: Field of Specialization / Field of Specialization: Industrial Automation (mandatory) Interdisciplinary Subject **Additional Examinations** Credits **Grading scale** Version Recurrence Duration Level Language Grade to a tenth Each winter term 9 German 1 term 4 1 Mandatory T-MACH-102151 **Material Flow in Logistic Systems** 9 CR Furmans

Competence Certificate

The assessment (Prüfungsleistung anderer Art) consists of the following assignments:

- 40% assessment of the final case study as individual performance,
- 60% semester evaluation which includes working on 5 case studies and defending those (For both assessment types, the best 4 of 5 tries count for the final grade.):
 - 40% assessment of the result of the case studies as group work,
 - 20% assessment of the oral examination during the case study colloquiums as individual performance.

A detailed description of the learning control can be found under Annotations.

Prerequisites

none

Competence Goal

The student

- acquires comprehensive and well-founded knowledge on the main topics of logistics, an overview of different logistic questions in practice and knows the functionality of material handling systems,
- is able to illustrate logistic systems with adequate accuracy by using simple models,
- is able to realize coherences within logistic systems,
- is able to evaluate logistic systems by using the learnt methods.

Content

The module *Material Flow in Logistic Systems* provides comprehensive and well-founded basics for the main topics of logistics. Within the lectures, the interaction between several components of logistic systems will be shown. The module focuses on technical characteristics of material handling systems as well as on methods for illustrating and evaluating logistics systems. To gain a deeper understanding, the course is accompanied by exercises and case studies.

Annotation

Students are divided into groups for this course. Five case studies are carried out in these groups. The results of the group work during the lecture period are presented and evaluated in writing. In the oral examination during the case study colloquiums, the understanding of the result of the group work and the models dealt with in the course is tested. The participation in the oral defenses is compulsory and will be controlled. For the written submission the group receives a common grade, in the oral defense each group member is evaluated individually.

After the lecture period, there is the final case study. This case study contains the curriculum of the whole semester. The students work individually on this case study which takes place at a predefined place and time (duration: 4h).

Recommendation

Recommended elective subject: Probability Theory and Statistics

Learning type Lecture, tutorial

M 7.121 Module: Materials [M-ETIT-102734]

Responsible:	Prof. Dr. Martin Doppelbauer
Organisation:	KIT Department of Electrical Engineering and Information Technology
Part of:	General Mechatronics

Materials (Election:	Materials (Election: 1 item)							
T-MACH-100531	Systematic Materials Selection	5 CR	Dietrich, Schulze					
T-MACH-105535	Composite Manufacturing - Polymers, Fibers, Semi-Finished Products, Manufacturing Technologies	5 CR	Henning					
T-ETIT-109292	Electrical Engineering Components	6 CR	Kempf					

Prerequisites

Application and exam is allowed only in one lecture of this modul (M-ETIT-102734 - Werkstoffe): "T-ETIT-109292 -Bauelemente der Elektrotechnik" or "T-MACH-100531 - Systematische Werkstoffauswahl" or "T-MACH-105535 -Faserverstärkte Kunststoffe ..."

Annotation

The three parts of the module "M-ETIT-102734 - Materials" are mutually exclusive

Course "Passive Bauelemente" will be taught in Wintersemester 2020/21 for the last time.Replacement will be "Bauelemente der Elektrotechnik".

M 7.122 Module: Materials for Lightweight Construction [M-MACH-102727]

Responsible:Dr.-Ing. Wilfried LiebigOrganisation:KIT Department of Mechanical Engineering

Part of: Interdisciplinary Subject

		Credits 4	Grading scale Grade to a tenth	Recurrence Each summer term	Duration 1 term	Language German	Level 4	Version 1
--	--	---------------------	--	---------------------------------------	---------------------------	---------------------------	------------	--------------

Mandatory			
T-MACH-105211	Materials of Lightweight Construction	4 CR	Liebig

Competence Certificate

Oral exam, about 25 minutes

Prerequisites

none

Competence Goal

The students are capable to name different lightweight materials and can describe their composition, properties and fields of application. They can describe the hardening mechanisms of lightweight materials and can transfer this knowledge to applied problems.

The students can apply basic mechanical models of composites and can depict differences in the mechanical properties depending on composition and structure. The students can describe the basic principle of hybrid material concepts and can judge their advantages in comparison to bulk materials. The students can name special materials for lightweight design and depict differences to conventional materials. The students have the ability to present applications for different lightweight materials and can balance reasons for their use.

Content

Introduction

Constructive, production-orientied and material aspects of lightweight construction

Aluminium-based alloys Aluminium wrought alloys Aluminium cast alloys

Magnesium-based alloys Magnesium wrought alloys Magnesium cast alloys

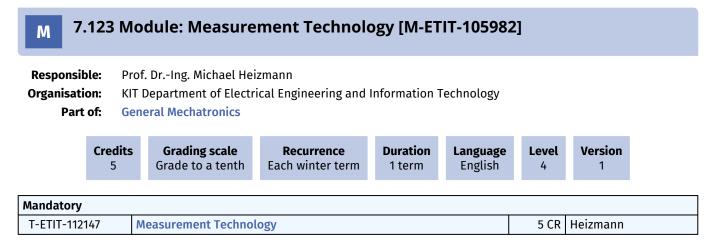

Titanium-based alloys Titanium wrought alloys Titanium cast alloys

High-strength steels High-strength structural steels Heat-treatable and hardenable steels

Composites - mainly PMC Matrices Reinforcements

Workload

The workload for the lecture "Design with Plastics" is 120 h per semester and consists of the presence during the lectures (21 h), preparation and rework time at home (50 h) and preparation time for the oral exam (49 h).

The examination takes place in form of a written examination lasting 120 minutes.

Prerequisites

M-ETIT-102652 - Messtechnik (German version) must not have started.

Competence Goal

- Students have a sound knowledge of the theoretical foundations of measurement technology, including modeling of measurement systems, consideration of nonlinearities, stochastic deviations and stochastic signals, acquisition of analog signals, and frequency and rotational speed measurement.
- Students are proficient in the approaches to measurement system design in terms of model assumptions, methods, and achievable results.
- Students are able to analyze and formally describe measurement technology tasks, synthesize possible solutions for measurement systems and assess the properties of the solution obtained.

Content

The module deals with the formal, methodical and mathematical fundamentals for the analysis and design of measurement systems. Focal points of the course are

- Measurement systems and deviations (including scales, the SI systems, modeling of measurement systems)
- Curve fitting (approximation, interpolation)
- Stationary behavior of measurement systems (characteristic curve, errors of the characteristic curve, nonlinearities, adjustment)
- Stochastic measurement errors (probabilistic analysis, samples, statistical test methods, statistic process control, error propagation)
- Stochastic processes (correlational measurements, spectral description of stochastic signals, system identification, matched filter, Wiener filter)
- Digitization of analog signals (sampling, quantization, analog-digital converters, digital-analog converters)
- Frequency and rotational speed measurement (generalized frequency concept, digital speed measurement, detection of direction)

Module grade calculation

The module grade is the grade of the written examination.

Annotation

In the module a lecture, an exercise and an examination are offered.

Workload

The workload includes:

- 1. attendance in lectures and exercises: 34 h
- 2. preparation / follow-up of lectures and exercises: 51 h
- 3. preparation of and attendance in examination: 65 h

total: 150 h = 5 CR

Recommendation

Basic knowledge in the fields of "Probability Theory" as well as "Signals and Systems" is helpful.

M.Sc. Mechatronics and Information Technology 2015 (Master of Science) Module Handbook as of 05/09/2024

7.124 Module: Mechanics in Microtechnology [M-MACH-102713]

Responsible:	Prof. Dr. Christian Greiner Dr. Patric Gruber
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Microsystems Technology (Complementary Modules) Interdisciplinary Subject

Credits 4	Grading scale Grade to a tenth	Recurrence Each winter term	Duration 1 term	Language German	Level 4	Version 1
Mandatory						
T-MACH-105334	Mechanics in Microted	chnology			4 CR	Greiner, Gruber

Competence Certificate

oral exam ca. 30 minutes

Prerequisites

none

Competence Goal

The students know and understand size and scaling effects in micro- and nanosystems. They understand the impact of mechanical phenomena in small dimensions. Based on this they can judge how they determine material processing as well as working principles and design of microsensors and microactuators.

Content

1. Introduction: Application and Processing of Microsystems

- 2. Scaling Effects
- 3. Fundamentals: Stress and Strain, (anisotropic) Hooke's Law
- 4. Fundamentals: Mechanics of Beams and Membranes
- 5. Thin Film Mechanics: Origin and Role of Mechanical Stresses
- 6. Characterization of Mechanical Properties of Thin Films and Small Structures: Measurement of Stresses and Mechnical Parameters such as Young's Modulus and YieldDtrength; Thin Film Adhesion and Stiction
- 7. Transduction: Piezo-resistivity, Piezo-electric Effect, Elektrostatics,...
- 8. Aktuation: Inverse Piezo-electric Effect, Shape Memory, Elektromagnetic Actuation,...

Workload

regular attendance: 22,5 hours self-study: 97,5 hours

Learning type

lecture

M 7.125 Module: Medical Image Processing for Guidance and Navigation [M-ETIT-106672]

Responsible:	Prof. DrIng. Maria Francesca Spadea
Organisation:	KIT Department of Electrical Engineering and Information Technology
Part of:	Interdisciplinary Subject

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
9	Grade to a tenth	Each winter term	1 term	English	4	2
Mandatory T-ETIT-113425	Medical Image Proces				0.00	Spadea

Competence Certificate

The examination takes place within the framework of an oral overall examination of approx. 30 minutes about the lecture including a presentation and discussion of the project developed during the course. The overall impression is rated.

Prerequisites

none

Competence Goal

- The students will be able to analyze, structure and formally describe problems in the field of image guided surgery and therapy.
- The students can apply the methods form medical image processing, surgical navigation, augmented reality for surgery and therapy, medical data science.
- The student will be able to communicate in English technical language.
- The students are able to perform calculations and use the necessary tools for this in a methodologically appropriate way.
- The students are able to critically evaluate them

Content

- This module is designed to provide students with the theoretical and practical aspects of image guidance for minimally invasive surgery and therapy
- This module gives an overview about current status of technology in operation rooms (OR) and advanced radiotherapy bunkers
- · Furthermore, this module gives knowledge about image process for quantitative information extraction
- Table of contents
 - Introduction to the course: minimally invasive surgery and medical data science
 - Git introduction
 - Image characteristics
 - Basic point, histogram and masked based operations
 - Similarity metrics, projections
 - Planning imaging, Dicom format, pre processing pipeline
 - Case study: planning in radiotherapy
 - Path planning
 - · Pixel based image segmentation: manual segmentation, threshold, region growing
 - Convolution based segmentation: edge detection, morphological filters
 - Case study: neurosurgery and tractography
 - Image registration
 - Atlas based segmentation: SABS, MABS, atlas selection
 - Rendering and computer graphics
 - In room imaging technology
 - Reference system, notation and transformation
 - Localizing systems, tracking and calibration
 - · Case study: patient monitoring in radiotherapy, adaptive treatments
 - Lab demonstration
 - Point based registration
 - Surface registration
 - Image features and descriptors (example with SIFT SURF)
 - Radiomics Features
 - Deep Learning in image processing
 - The role of deep learning in radiotherapy
 - Augmentet reality

Module grade calculation

The module grade is the grade of the oral exam.

A bonus can be earned for submitting homework that will be provided during the lecture time.

The exact criteria for awarding a bonus will be announced at the beginning of the lecture period. If the grade in the oral exam is between 4.0 and 1.3, the bonus improves the grade by 0.3 or 0.4.

Bonus points do not expire and are retained for any examinations taken at a later date.

Annotation

The course is limited to a number of 30 participants due to capacity reasons. If necessary, a selection procedure will be carried out. Places will be allocated taking into account the students' study program (students of "Biomedical Engineering" specialization will be preferred, students from Computer Science Program and interest in medical applications will be preferred) and academic progress. Details will be announced on the lecture website.

Workload

The workload includes:

- 1. attendance in lectures and exercises: 15*6 h = 90 h
- 2. preparation / follow-up: 15*8 h = 120 h
- 3. preparation of and attendance in examination: 60 h

A total of 270 h = 9 CR

Recommendation

- · Basic knowledge in the field of medical imaging;
- Knowledge of basic programming concept;
- Familiarity with Linux environment;
- Basic knowledge of linear algebra (transformations);
- Attitude towards teamwork and code management in Git;
- It is recommended to have access to a personal computer or desktop

Learning type

Lectures in "Medical Image Processing" (3 SWS), Seminars in "In room imaging modalities" (1 SWS), Tutorials/ Demostrations in Medical image processing and navigation (2 SWS)

M 7	.126	Мо	dule: Medical	Imaging Techno	ology [M-I	ETIT-10677	78]

Mandatory			
T-ETIT-113625	Medical Imaging Technology	6 CR	Spadea

The examination takes place in form of a written examination lasting 120 minutes.

Prerequisites

none

Competence Goal

For each imaging modality students will be able to:

- identify required energy source;
- analyze the interactions between the form of energy and biological tissue distinguishing desired signal from noise contribution;
- critically interpret the image content to derive knowledge
- evaluate image quality and implementing strategies to improve it.

Moreover, the students will be able to communicate in technical and clinical English languange.

Content

- Basic knowledge of mathematical and physical principles of medical imaging formation, including X-ray based modalities, nuclear medicine imaging, magnetic resonance imaging and ultrasound
- Components of medical imaging devices.
- Assessment of image quality in terms of signal-to-noise-ratio, presence of artifact, spatial, Spectral and temporal resolution
- · Safety and protection for patients and workers.

Module grade calculation

The module grade is the grade of the written exam.

A bonus can be earned for voluntary tasks such as:

- · presentation and discussion of a specific topic,
- participation to writing the lecture minutes
- implementation of educational tools

The exact criteria for awarding a bonus will be announced at the beginning of the lecture period. If the grade in the oral exam is between 4.0 and 1.3, the bonus improves the grade by 0.3 or 0.4.

Bonus points do not expire and are retained for any examinations taken at a later date.

Workload

- 1. attendance in lectures an exercises: 15*4 h = 60 h
- 2. preparation / follow-up: 15*6 h = 90 h
- 3. preparation of and attendance in examination: 30 h

A total of 180 h = 6 CR

Recommendation

Basic knowledge in the field of physics and signal processing is helpful.

M.Sc. Mechatronics and Information Technology 2015 (Master of Science) Module Handbook as of 05/09/2024

Manuatory			
T-ETIT-113421	Medical Imaging Technology II	3 CR	Spadea

The examination takes place in form of a written examination lasting 90 minutes.

Prerequisites

none

Competence Goal

For each imaging modality students will be able to:

- · identify required energy source;
- analyze the interactions between the form of energy and biological tissue
- distinguishing desired signal from noise contribution;
- critically interpret the image content to derive knowledge
- evaluate image quality and implementing strategies to improve it.

Moreover, the student will be able to communicate in technical and clinical English language.

Content

- the basic knowledge of mathematical and physical principles of medical imaging formation, including nuclear medicine imaging and magnetic resonance imaging.
- the component of medical imaging devices.
- assessment of image quality in terms of signal-to-noise-ratio, presence of artifact, spatial, spectral and temporal resolution
- · safety and protection for patients and workers.

Module grade calculation

The module grade is the grade of the written exam.

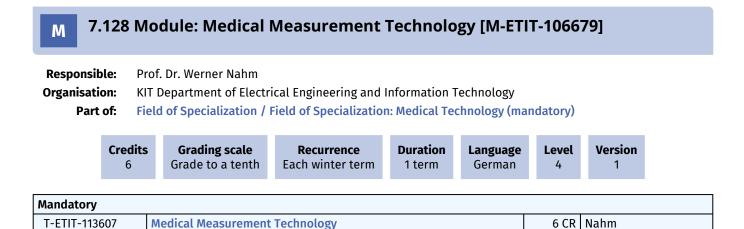

Workload

- attendance in class: 15*2h = 30h
- preparation / follow-up: 15*2h = 30h
- exam preparation / attendance: 30h = 90h

A total of 90h = 3 CR

Recommendation

- Basic knowledge in the field of physics and signal processing is helpful.
- The contents of the module "Medical Imaging Technology I" are recommended.

The assessment takes place in the form of a written examination lasting 120 min and 120 points.

Prerequisites

none

Competence Goal

The students have analyzed medical issues and identified metrological tasks.

They have proposed a suitable combination of analog circuit technology and digital signal processing and applied it to solve the measurement task.

They have identified the sources of biosignals and explained the underlying physiological mechanisms. They have analyzed the signal properties and derived the resulting requirements for the measurement system.

The students have broken down the measurement chain from the acquisition of the physical measured variable to the presentation of medically relevant information and compared alternative concepts.

Sustainability competence objective: Students have actively shaped their learning process.

Content

Using selected examples, the lecture spans the arc from the medical requirements to the metrological task and the technical realization back to the application. The technical solutions are considered at the levels of measuring principle, measuring method, measuring procedure and measuring system.

The following measuring methods / measuring systems are covered:

- Thermometry
- Blood pressure measurement (invasive, non-invasive, continuous, discontinuous)
- Pulse oximetry
- ECG
- Tonometry
- · Audiological measurement procedures (audiometry, tympanometry, otoacoustic emissions)
- EMG
- EEG (spontaneous, evoked)
- CTG
- Bioimpedance analysis
- HZV measurement (Fick's principle, indicator method, US method)
- Spiroergometry

The specialist focus is on

- Sources of biosignals
- sensor technology
- Physical measurement technology
- · Analog signal conversion, amplification and filtering
- Influence of disturbance variables, estimation of measurement errors
- Analog-digital conversion, digital signal processing, user interface
- Patient safety / electrical safety
- Standards and norms

Module grade calculation

The module grade is the grade of the written exam.

Bonus points can be awarded for a student contribution to the lecture.

- The student contribution consists of the formulation of learning objectives and questions to check the learning objectives for the lecture units. The corresponding lecture units are made available for selection in ILIAS.
- The students create the student contributions in small groups. They submit their contribution in the form of a PowerPoint presentation in ILIAS by the specified deadline.
- The presentation will be corrected and approved by the lecturer or course tutor if necessary.
- The contribution will be presented by the group in the following lecture unit within the specified period and discussed with the plenum. If necessary, the presenting group takes on board the feedback and creates a revised vision. The final version of the contribution is made available to all lecture participants in ILIAS for exam preparation.
- Bonus points are awarded by the lecturer on the basis of the written paper and the presentation in the plenary session.
- Each participant can earn a maximum of 6 bonus points. Bonus points can only be earned once.
- Participation in the student contributions is voluntary.

The bonus points are credited as follows:

- A maximum of 6 points can be credited to the exam result for the bonus task passed.
- The grade can thus be improved by a maximum of one grade step.
- The total number of points remains limited to 120 points. The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for any examinations taken at a later date.

Workload

- Attendance in the lecture: 2*15*2h = 60h
- Preparation / follow-up: 2*15*2h = 60h
- Preparation and participation in the exam: 2*30h = 60h

total 180h = 6 CR

Recommendation

Required are:

- Basics in physiology and anatomy (e.g. contents of the module "Physiologie und Anatomie für die Medizintechnik")
- Previous knowledge of analog circuit technology (e.g. content of the module "Lineare elektrische Netze") and digital signal processing

7.129 Module: Micro System Simulation [M-MACH-105486] Μ **Responsible:** Prof. Dr. Jan Gerrit Korvink **Organisation:** KIT Department of Mechanical Engineering Part of: Field of Specialization / Field of Specialization: Microsystems Technology (Complementary Modules) **Interdisciplinary Subject** Credits **Grading scale** Duration Language Version Recurrence Level Grade to a tenth Each summer term English 4 1 term 4 1 Mandatory T-MACH-108383 **Microsystem Simulation** 4 CR Korvink

Competence Certificate

Oral exam (20 min)

Competence Goal

Students are able to formulate the finite element method such as needed for mechanics, heat transfer, or transport processes. They are familiar with approximation using functions, and the relation between a finite element CAD model, and the underlying mechanism to solve the equations, an essential basis for modern engineering design.

Content

Microsystems are multiphysical devices. For example, in order to measure infrared radiation, a microsystem might use the Seebeck (thermoelectric) effect, which couples heat to electrical currents – thus radiation, heat flow, and charge transport are coupled in a multiphysical manner.

Because microsystemcomponents are very small (in the micrometre range), often the operational modalities will be described better by statistical mechanics or evenquantum mechanics, so that we have to take caution to use the right models.

In many cases, commercial tools are unavailable, so that engineers are forcedbuild their own simulation programs to be able to make intelligent designs.

In this lecture you will learn the fundamentals needed to build such a computer program. Because we want to be very efficient in learning, and not re-invent all the wheels or confront computer science issues such as compilation and libraries, you will learn to build your program in the higher level programming environment Mathematica ®.

Annotation

The lecture is aimed at students who wish to learn the basis of numerical modelling and simulation programs, so as to understand the functioning of these most important engineering design tools. Practical examples are taken from microsystems engineering to illustrate the concepts.

Workload

Literature: 20 h Lessions: 21 h

Preparation and Review: 50 h

Exam preparation: 30 h

Recommendation

There are no requirements for background, however, I recommend that you have at least the following: Basic knowledge in engineering, physics, and mathematics.

Regular attendance is definitely recommended, as well as doing all the exercises.

Literature

The following references are usedby the lecturers to prepare the lecture. Students are not required to access most of these, but of course it does not hurt! Hints for efficient further reading, depending on interest, will be provided during the lecture.

7.130 Module: Microactuators [M-MACH-100487] Μ **Responsible:** Prof. Dr. Manfred Kohl **Organisation:** KIT Department of Mechanical Engineering Part of: Field of Specialization / Field of Specialization: Microsystems Technology (mandatory) Field of Specialization / Field of Specialization: Robotics (Complementary Modules) **Interdisciplinary Subject Additional Examinations** Credits **Grading scale** Duration Version Recurrence Language Level Grade to a tenth Each summer term 1 term German 4 4 1 Mandatory T-MACH-101910 **Microactuators** 4 CR Kohl

Competence Certificate

Written exam: 60 min

Prerequisites

none

Competence Goal

- Knowledge of the actuation principles including pros and cons
- Knowledge of important fabrication technologies
- Explanation of layout and function of the microactuators
- Calculation of important properties (time constants, forces, displacements,

etc.)

- Development of a layout based on specifications

Content

- Basic knowledge in the material science of the actuation principles
- Layout and design optimization
- Fabrication technologies
- Selected developments
- Applications

The lecture includes amongst others the following topics:

- Microelectromechnical systems: linear actuators, microrelais, micromotors
- · Medical technology and life sciences: Microvalves, micropumps, microfluidic systems
- Microrobotics: Microgrippers, polymer actuators (smart muscle)
- Information technology: Optical switches, mirror systems, read/write heads

Workload

lTime of attendance:	15 * 1,5 h = 22,5 h

Achievement will be examined in an oral examination (approx. 20 minutes).

Prerequisites

none

Success control is carried out as part of a written overall examination (120 minutes) of the selected courses, which in total meet the minimum requirement for LP.

Prerequisites

none

Competence Goal

The students have a deep understanding of microwave technology with a focus on passive components of microwave circuit technology. This includes the functioning of the most important microwave components such as waveguides, filters, resonators, couplers, power dividers up to directional lines and circulators. Students are able to understand and describe how these components work. You can transfer this knowledge to other areas of high-frequency technology and use it to analyze and solve high-frequency problems. You are able to apply what you have learned in a practical way.

Content

In-depth lecture on high-frequency technology: The focus of the lecture is the teaching of the functioning of the most important passive microwave components, starting with waveguides, through filters, resonators, power dividers and couplers to directional lines and circulators.

Accompanying the lecture, exercises are given on the lecture material. These are discussed in a large hall exercise and the associated solutions are presented in detail.

Module grade calculation

The module grade is the grade of the written exam.

Annotation

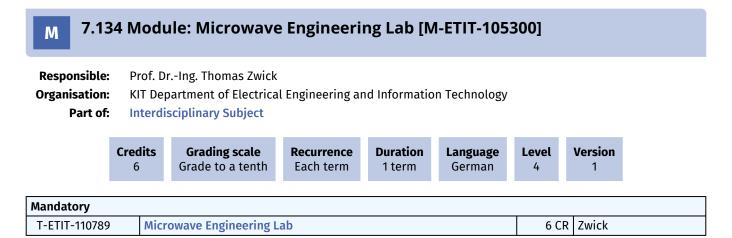

WS: German SS: English The exam is in each semester and for every student bilingual.

Workload

The workload includes: Attendance study time lecture / exercise: 45 h Self-study time including exam preparation: 105 h A total of 150 h = 5 LP

Recommendation

Knowledge of the basics of high frequency technology is helpful.

To prepare the laboratory tests, each laboratory group has to do some homework together before the experiment and hand in a simple copy to the supervisor immediately before the start of the experiment. The tasks for the experiment as such are processed and logged during the implementation. The protocol should be handed over to the supervisor immediately after the experiment has been carried out. Before each experiment, there is a written exam or oral (approx. 20 min., No aids) the content of the experiment.

Prerequisites

none

Competence Goal

The students have in-depth knowledge of high-frequency components and systems as well as how the most important high-frequency measuring devices work (network analyzer, spectrum analyzer, noise measurement, power measurement, oscilloscope, antenna measurement). They are also familiar with handling high-frequency measuring devices and components. They are able to independently select and operate measuring devices based on the specific applications and to interpret the measurement results. In addition, they are able to work together in a team in a self-organized manner.

Content

Under the motto: "Practical relevance through state-of-the-art equipment and current problems", the students are offered a modern and technically sophisticated high-frequency laboratory at master's level. The aim of the experiments is to deepen the theory imparted in the lectures in practice and to train the use of high-frequency measuring devices and RF components. In groups of 2-4 students, various experiments are carried out and recorded on 8 afternoons. The order and topics of the experiments can vary.

Module grade calculation

The grade for the test execution consists of the preparation, the protocol and the written or oral learning objective control for the respective test. The final grade for the entire laboratory results from the overall impression of the performance. Students who appear unprepared for the respective experiment are not allowed to take part in the experiment. The attempt must be repeated at another time.

Workload

The workload includes:

Attendance study time laboratory: 45 h Test preparation, protocols, test preparation: 135 h A total of 180 h = 6 LP

Recommendation

Knowledge of microwave measurement technology and RF components and systems is helpful.

7.135 Module: Microwaves Measurement Techniques [M-ETIT-100424] Μ **Responsible:** Prof. Dr.-Ing. Mandatory			
T-ETIT-100733	Microwaves Measurement Techniques	4 CR	Zwick

Competence Certificate

The success control is carried out as part of an oral overall examination (approx. 20 minutes) of the selected courses, which in total meet the minimum requirement for LP.

Prerequisites

none

Competence Goal

The students have an in-depth knowledge of the structure and functioning of microwave measuring devices (signal generator, power measurement, frequency measurement, spectral analyzer, network analyzer). They understand the special features of measuring powers, frequencies and scattering parameters in the microwave range. You can apply the knowledge you have learned in practice and interpret the measurement results. You can analyze and assess possible sources of error in the measurement. You are able to design measurement setups with given measurement values ??and to carry out the measurements correctly.

Content

This lecture contains all basic areas of today's high-frequency measurement techniques, such as power measurement, frequency measurement, spectral analysis and network analysis. Particular attention is paid to the description of those measurement systems and methods that are used in modern applications.

Module grade calculation

The module grade is the grade of the oral exam.

Workload The workload includes: Attendance study time lecture / exercise: 45 h Self-study time including exam preparation: 75 h A total of 120 h = 4 LP

Recommendation

Knowledge of the basics of high frequency technology is helpful.

T-MACH-105539	Modern Control Concepts I	4 CR	Groell, Matthes

Competence Certificate

A performance assessment is held in form of a written examination of 60 minutes.

Prerequisites

None

Competence Goal

After attending the lecture, the students are able to

- Analyze linear systems with respect to various properties,
- Identify linear dynamic models,
- · Design linear controllers with feedforward control in the time domain and incooperate actuator limits,
- Use Matlab for the realization of the considered concepts and
- Implement controllers in software.

Content

- 1. Introduction (system classes, nomenclature)
- 2. Equilibria
- 3. Linearization (software based, Hartman-Grobman-Theorem)
- 4. Parameter identification of linear dynamic models (SISO+MIMO)
- 5. PID-controller (realization, design-hints, Anti-Windup-mechanisms)
- 6. Conzept of 2DOF-Controllers (structure, reference signal design)
- 7. State space (geometric view)
- 8. Controller with state feedback and integrator expansion (LQ-design, Eigenvalue placement, decoupling design)
- 9. Observer (LQG-design, disturbance observer, reduced observer)

Workload

- 1. Attendance time Lecture: 15 * 1.5h = 22.5h
- 2. Pre- and postprocessing time Lecture: 15 * 3.5h = 52.5h
- 3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Recommendation

The attendance of the following lecture is recommended:

Competence Certificate

A performance assessment is held in form of an oral examination of 30 minutes.

Prerequisites

None

Competence Goal

After attending the lectures, the students are able to

- · analyze and control multivariable systems,
- analyze and control DAE systems,
- analyze and control time delay systems,
- use Matlab for simulation, analysis and synthesis of the discussed concepts,
- solve linear control problems with more routine.

Content

- 1. Discrete time systems
- 2. The role of zeros (different kinds of zeros, zero dynamics, internal model principle, repetitive control, 2Dof structures, controller design via Diophantine equations)
- 3. Limitations of control systems (existency question, limitations w.r.t. time and frequency domain)
- 4. Linear multivariable systems (state space with structural invariants, canonical forms in frequency domain, polynomial matrices, matrix fractions)
- 5. Multivariable control for LTI systems (coprime factorization, relative gain array analysis, decentral and cooperative controls, decoupling controls, tracking controls)
- 6. Internal model control (internal stability, Youla parametrization, predictive structures, different 2DoF structures)
- 7. Advanced control loop structures (serial and parallel cascades, multiple controller structures, inferential control,
- split range control, extremal controls)
- 8. Differential-algebraic systems of equations
- 9. Time delay systems
- 10. Open topic (based on learning progress and interests, the aforementioned topics are deepened or other topics, such as time-varying systems, model order reduction, alternative stability concepts, etc. are discussed.)

Workload

- 1. Attendance time Lecture: 15 * 1.5h = 22.5h
- 2. Pre- and postprocessing time Lecture: 15 * 3.5h = 52.5h
- 3. Exam preparation and attendance exam: 45h

Modern Control Concepts III

Prerequisites

None

Competence Goal

After attending the lectures, the students are able to

- analyze nonlinear systems and their solutions w.r.t. stability,
- · design nonlinear controls with feedforward using different methods.

Content

- 1. Qualitative theory of ODEs (advanced solution term in ODEs, bifurcation, Poincaré index, equilibria in infinity)
- 2. Lyapunov stability (definitions, theorems, topological properties of domains of attraction, Barbashin-Krasovskii-LaSalle's theorem, Barbalat's lemma)
- 3. Feedback linearization
- 4. Modifications of feedback linearization (zero dynamics, advanced linearization)
- 5. Flatness-based controller design
- 6. Lyapunov-based controller design (backstepping desing, nonlinear damping, tracking control)
- 7. Passivity-based controller design
- 8. Sliding mode control
- 9. Alternative linearization concepts
- 10. Open topic (based on learning progress and interests, the aforementioned topics are deepened or other topics, such as alternative stability concepts, observer design for nonlinear systems, basics in differential geometry, analysis and synthesis of underactuated systems, hybrid systems, Luré-type control or adaptive control.)

7.139 Module: Modern Radio Systems Engineering [M-ETIT-100427] Μ **Responsible:** Prof. Dr.-Ing. Thomas Zwick **Organisation:** KIT Department of Electrical Engineering and Information Technology Part of: Interdisciplinary Subject Credits **Grading scale** Duration Language Level Version Recurrence Grade to a tenth English 4 Each summer term 1 term 4 1

Mandatory			
T-ETIT-100735	Modern Radio Systems Engineering	4 CR	Zwick

Competence Certificate

The success control is carried out as part of an oral overall examination (approx. 20 minutes) of the selected courses, which in total meet the minimum requirement for LP.

Prerequisites

none

Competence Goal

After attending this course, students will be able to design an analog front end for a radio transmission system at the block diagram level. In particular, the non-idealities of typical components of high-frequency technology and their effects on the overall system performance are part of the knowledge imparted. The students also have an in-depth understanding of various radar modulation methods and the relationships to approval conditions and performance.

Content

The course gives a general overview of radio transmission systems and their components. The focus is on the system components realized in analog technology and their non-idealities. Based on the physical functioning of the various system components, parameters are derived that allow an examination of their influence on the overall system performance.

The exercise is closely linked to the lecture and mainly consists of computer-based exercises that allow a visualization of the influences of various non-idealities on the overall system performance and demonstrate the practical system design of modern radio transmission systems.

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes: Attendance study time lecture: 30 h Attendance study time computer exercise SystemVue ESL Design Software / MATLAB: 15 h Self-study time including exam preparation: 75 h A total of 120 h = 4 LP

Recommendation

Knowledge of the basics of radio frequency technology and communications technology is helpful.

M 7.140 Module: Motion in Human and Machine - Seminar [M-INFO-102555] Responsible: Prof. Dr.-Ing. Tamim Asfour Organisation: KIT Department of Informatics Part of: Field of Specialization / Field of Specialization: Robotics (Complementary Modules) Interdisciplinary Subject

	Credits 3	Grading scale Grade to a tenth	Recurrence Each summer term	Duration 1 term	Language English	Level 4	Version 3
0							

Mandatory			
T-INFO-105140	Motion in Human and Machine - Seminar	3 CR	Asfour

Competence Goal

The student knows procedures for modelling human motion, as well as possibilities for its processing and analysis. He/she knows methods for learning motion primitives and mapping human motion to robots that have different kinematics and dynamics and can apply them in new contexts.

Students are familiar with the DFG Code of Conduct "Guidelines for Safeguarding Good Scientific Practice" and successfully apply these guidelines in the preparation of their scientific work.

Content

This interdisciplinary block seminar deals with methods of modelling, generating and controlling movements in humans and robot systems. Students get an insight into this interdisciplinary field and learn the basics of biological motion, biomechanical simulation, robotics, and machine learning. In the introduction, motion generation as effect of muscle contraction is discussed. It will be shown how movement patterns can be identified and categorized based on the observation of human movements and how these patterns can be reproduced on a humanoid robot. Finally, methods for the learning of movement primitives from human demonstration will be presented and their application for the generation of motion for humanoid robots will be explained.

Annotation

The block internship is an interdisciplinary event in co-operation with the University of Stuttgart and the University of Heidelberg.

Workload

Seminar with 3 SWS, 3 LP 3 LP corresponds to 90 hours, including 30 hours attendance time 15 hours group work 20 hours literature research 20 hours manuscript preparation 5 hours video creation

Recommendation

Programming experience in C++, Python or Matlab is recommended. Attending the lectures Robotics I – Introduction to Robotics, Robotics II: Humanoid Robotics, Robotics III - Sensors and

Perception in Robotics, Mechano-Informatics and Robotics and Wearable Robotic Technologies is recommended.

7.141 Module: Motor Vehicle Laboratory [M-MACH-102695] Μ

T-MACH-10522	22	Moto	or Vehicle Labor				4 CR	Frey

Competence Certificate

After completion of the experiments: written examination

Duration: 90 minutes

Auxiliary means: none

Prerequisites

None

Competence Goal

The students have deepened their knowledge on motor vehicles acquired in lectures and can apply it practically. They have an overview of the applied measuring technique and can execute and analyse measurements for the handling of given problem definitions. They are ready to analyze and to judge measurement results.

Content

1. Determination of the driving resistances of a passenger vehicle on a roller dynamometer; measurement of the engine performance of the test vehicle

- 2. Investigation of a twin-tube and a single-tube shock absorber
- 3. Behavior of car tyres under longitudinal forces and lateral forces
- 4. Behavior of car tires on wet road surface
- 5. Rolling resistance, energy dissipation and high-speed strength of car tires
- 6. Investigation of the moment transient characteristic of a Visco clutch

Annotation

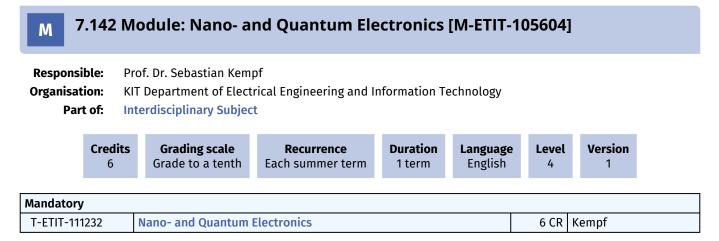

The admission is limited to 12 persons per group.

Workload

regular attendance: 31,5 hours self-study: 103,5 hours

Literature

- 1. Matschinsky, W: Radführungen der Straßenfahrzeuge, Verlag TÜV Rheinland, 1998
- 2. Reimpell, J.: Fahrwerktechnik: Fahrzeugmechanik, Vogel Verlag, 1992
- 3. Gnadler, R.: Documents to the Motor Vehicle Laboratory

The assessment of success takes place in the form of a written examination lasting 120min. The grade corresponds to the result of the written examination.

Prerequisites

none

Competence Goal

Students will understand the physical limits of CMOS scaling and will be able to analyze the function of conventional nanoelectronic devices. Students will also understand the operation of novel nanoelectronic and quantum electronic devices and will be able to design this kind of devices that are based on quantum mechanical effects. They develop the ability to design nanoelectronic sensors and devices and can understand and analyze the fabrication methods for nanoand quantum electronic devices.

Content

Nanoelectronics deals with integrated circuits whose typical length scale is well below 100nm. In this regime, physical effects, in particular of quantum mechanical origin, occur and strongly influence the scaling of classical microelectronic devices. This ultimately leads to a new form of electronic components as well as novel operation principles. A special form of nanoelectronics is quantum electronics in which quantum mechanical effects are exploited on purpose to build an entirely new class of devices whose performance reaches far beyond any other microelectronics devices. Well-known examples are superconducting digital electronics which enables to build, for example, microprocessors with clock rates exceeding several 100GHz, or the quantum computer, which will lead to a change of paradigms in the field of information processing.

Within this context, the module "Nano- and quantum electronics" intends to give students an overview of the theoretical and practical aspects of nano- and quantum electronics. In particular, it discusses the following topics:

- Limitations of conventional CMOS technology
- Quantum mechanical effects in the field of nano- and quantum electronics (quantized conductance, Coulomb blockade, tunnel effect, etc.)
- Hot-electron effect
- · Nano- and quantum-technological manufacturing and analysis methods
- Nanostructure field-effect transistors
- Quantum dots
- Carbon nanotube field-effect transistor
- Resonant tunnel diodes
- Unipolar resonant tunnel transistor
- Single Electron Transistor (SET)
- Josephson junction based analog and digital electronics
- · Quantum bits, quantum computers and quantum computing

The tutorial is closely linked to the lecture and deals with special aspects concerning the development of nano- and quantum electronics. In particular, the development and system integration of such devices for various applications is discussed by means of exercises.

Module grade calculation

The module grade is the grade of the written examination.

Workload

A workload of approx. 175h is required for the successful completion of the module. This is composed as follows:

- Attendance time in lectures and exercises: 18*1.5h + 6*1.5h = 36h
- Preparation and follow-up of lectures: 21*3h= 54h
- Preparation and follow-up of tutorials: 7*5h= 35h
- Preparation for the exam: 50h

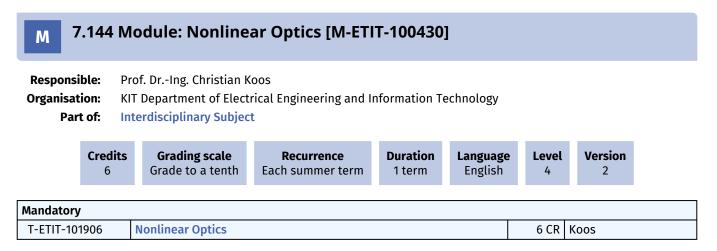

Recommendation

Successful completion of the modules "Superconductivity for Engineers" and "Einführung in die Quantentheorie für Elektrotechniker" is recommended.

	Credit 3	ts	Grading scale Grade to a tenth						
Mandatory									
T-ETIT-100980 Nonlinear Control Systems 3 CR Kluwe									

Prerequisites

none

Competence Certificate

The oral exam is offered continuously upon individual appointment.

Prerequisites

none

Competence Goal

The students

- understand and can mathematically describe the effect of basic nonlinear-optical phenomena using optical susceptibility tensors,
- understand and can mathematically describe wave propagation in nonlinear anisotropic materials,
- have an overview and can quantitatively describe common second-order nonlinear effects comprising the electrooptic effect, second-harmonic generation, sum- and difference frequency generation, parametric amplification and optical rectification,
- have an overview and can quantitatively describe the Kerr effect and other common third-order nonlinear effects, comprising self- and cross-phase modulation, four-wave mixing, self-focussing, and third-harmonic generation,
- have an overview and can describe nonlinear-optical interaction in active devices such as semiconductor optical amplifiers
- conceive the basic principles of various phase-matching techniques and can apply them to practical design problems,
- conceive the basic principles electro-optic modulators, can apply them to practical design problems, and have an overview on state-of-the art devices,
- conceive the basic principles third-order nonlinear signal processing and can apply them to practical design problems.

Content

- 1. The nonlinear optical susceptibility: Maxwell's equations and constitutive relations, relation between electric field and polarization, formal definition and properties of the nonlinear optical susceptibility tensor,
- 2. Wave propagation in nonlinear anisotropic materials
- 3. Second-order nonlinear effects and devices: Linear electro-optic effect / Pockels effect, second-harmonic generation, sum- and difference-frequency generation, phase matching, parametric amplification, optical rectification
- 4. Third-order nonlinear effects and devices: Nonlinear refractive index and Kerr effect, self- and cross-phase modulation, four-wave mixing, self-focussing, third-harmonic generation
- 5. Nonlinear effects in active optical devices

Module grade calculation

The module grade is the grade of the oral exam.

There is a bonus system based on the problem sets that are solved during the tutorials: During the term, 3 problem sets will be collected in the tutorial and graded without prior announcement. If for each of these sets more than 70% of the problems have been solved correctly, a bonus of 0.3 grades will be granted on the final mark of the oral exam.

Workload

Approx. 180 h - 30 h lectures, 30 h exercises, 120 h homework and self-studies

Competence Certificate

Written exam, 60 min

Prerequisites

None

Competence Goal

- Knowledge of the actuation and sensing principles including pros and cons
- Knowledge of important fabrication technologies
- Explanation of layout and function of the actuators and sensors
- Calculation of important properties (time constants, forces, displacements, sensitivity etc.)
- Development of a layout based on specifications

Content

The content of the lecture is among others:

- Piezo actuators
- Magnetostriktive actuators
- Shape memory actuators
- Electro-/Magnetorheologicical actuators
- Sensors: Concepts, materials, fabrication
- Micromechanical sensors: Pressure, force, inertial sensors
- Temperature sensors
- · Sensors for bioanalytics
- Mechano-magnetic sensors

```
Responsible:Prof. Dr. Wolfgang ReichelOrganisation:KIT Department of MathematicsPart of:General Mechatronics
```

Mandatory			
T-MATH-111700	Numerical Methods - Exam	5 CR	Kunstmann, Plum, Reichel

Competence Certificate

Success control takes the form of a written examination (120 minutes).

Prerequisites

none

Competence Goal

Students who pass the module are familiar with basic concepts and ways of thinking on the topic of numerical mathematics. They know different procedures for solving linear and nonlinear problems in numerical mathematics. They are furthermore able to use numerical methods for solving problems from applications in an independent, critical, and needs-based way.

Content

In the lecture basic ideas and numerical methods for the following topics will be presented:

- systems of linear equations, Gauss-algorithm, LR-decomposition, Cholesky decomposition
- eigenvalue problems, von-Mises iteration
- linear optimization (also called linear programming)
- error analysis
- · Newton's method
- quadrature, Newton-Cotes formulas
- numerical solution of initial value problems, Runge-Kutta methods
- finite difference method for solving boundary value problems
- finite elements

Module grade calculation

The module grade is the grade of the written exam.

Workload

Approximately 150h workload. The workload includes:

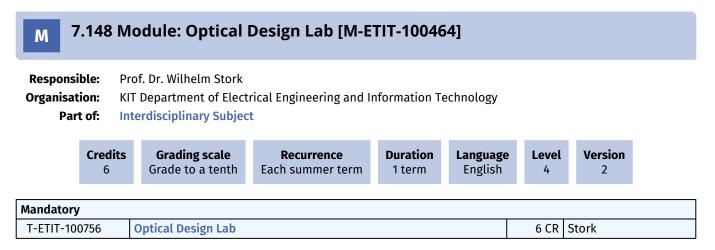

45h - attendance in lectures, exercises and examination

105h – self studies:

- follow-up and deepening of the course content
- solving problem sheets
- · literature study and internet research on the course content
- · preparation for the module examination

7.147 Module: Optical Communicatons Laboratory [M-ETIT-100437] Μ **Responsible:** Prof. Dr.-Ing. Christian Koos **Organisation:** KIT Department of Electrical Engineering and Information Technology Part of: **Interdisciplinary Subject** Credits **Grading scale** Duration Language Version Recurrence Level Grade to a tenth 6 Each summer term 1 term German 4 1 Mandatory T-ETIT-100742 **Optical Communications Laboratory** 6 CR Koos

Prerequisites

Competence Certificate

The examination consists of an oral exam (20 min).

Prerequisites

none

Competence Goal

The students can apply previous theoretical knowledge in optics to design optical systems based on ray tracing, using a typical optics design software.

The students can apply typical analysis methods to evaluate the imaging performance of optical systems.

The students can recognize aberrations in optical systems and apply methods to compensate them.

Content

The students participating in this lab are given the opportunity to gain practical experience in the use of software tools commonly used in industry for the design of optical elements and systems. Thus improving their knowledge in optical engineering.

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Approximately 162 h workload of the student.

The workload includes:

- 1. attendance in lectures an exercises: 36 h - 9 excercises of 4 h
- 2. preparation / follow-up: 51 h
 - preparation 9x3 h
 - writing lab reports: 8x3 h
- 3. preparation of and attendance in examination: 75h

Recommendation

Basic knowledge in optics. The participation in the course Optical Engineering is strongly adviced.

7.149 Module: Optical Transmitters and Receivers [M-ETIT-100436] Μ

Responsible:	Prof. Dr. Wolfgang Freude
Organisation:	KIT Department of Electrical Engineering and Information Technology

Mandatory							
T-ETIT-100639 Optical Transmitters and Receivers					6 CR	Freude	

Competence Certificate

Oral examination (approx. 20 minutes). The individual dates for the oral examination are offered regularly.

Prerequisites

none

Competence Goal

The students

- understand the peculiarities of optical communications, and how optical signals are generated, transmitted and received.
- know about sampling, quantization and coding,
- · learn the basics about noise on reception,
- understand the properties of a linear and a nonlinear optical fibre channel, grasp the idea of channel capacity and spectral efficiency,
- know about various forms of modulation,
- acquire knowledge of optical transmitter elements,
- understand the function of optical amplifiers.
- have a basic understanding of optical receivers.
- know the sensitivity limits of optical systems, and •
- understand how these limits are measured.

Content

The course concentrates on basic optical communication concepts and connects them with the properties of physical components. The following topics are discussed:

- Advantages and limitations of optical communication systems
- · Optical transmitters comprising lasers and modulators
- · Optical receivers comprising direct and heterodyne reception
- Characterization of signal quality

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Approx. 120 hours workload for the student. The amount of work is included:

30 h - Attendance times in lectures

15 h - Exercises

75 h - Preparation / revision phase

Recommendation

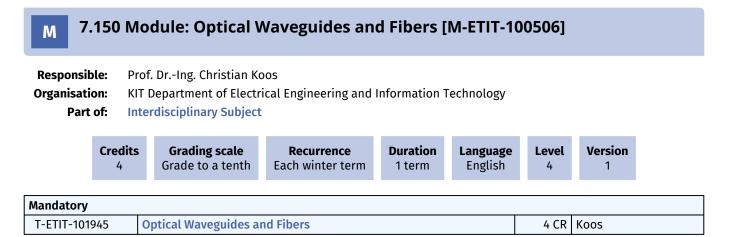

Knowledge of the physics of the pn-junction

Literature

Detailed textbook-style lecture notes can be downloaded from the IPO lecture pages.

Competence Certificate

Type of Examination: Oral exam

Duration of Examination: approx. 20 minutes

Modality of Exam: The written exam is offered continuously upon individual appointment.

Prerequisites None

Competence Goal

The students

- conceive the basic principles of light-matter-interaction and wave propagation in dielectric media and can explain the origin and the implications of the Lorentz model and of Kramers-Kronig relation,
- are able to quantitatively analyze the dispersive properties of optical media using Sellmeier relations and scientific databases,
- can explain and mathematically describe the working principle of an optical slab waveguide and the formation of guided modes,
- are able to program a mode solver for a slab waveguide in Matlab,
- are familiar with the basic principle of surface plasmon polariton propagation,
- know basic structures of planar integrated waveguides and are able to model special cases with semi-analytical approximations such as the Marcatili method or the effective-index method,
- are familiar with the basic concepts of numerical mode solvers and the associated limitations.
- are familiar with state-of-the-art waveguide technologies in integrated optics and the associated fabrication methods,
- know basic concepts of of step-index fibers, graded-index fibers and microstructured fibers,
- are able to derive and solve basic relations for step-index fibers from Maxwell's equations,
- are familiar with the concept of hybrid and linearly polarized fiber modes,
- can mathematically describe signal propagation in single-mode fibers design dispersion-compensated transmission links,
- · conceive the physical origin of fiber attenuation effects,
- are familiar with state-of-the-art fiber technologies and the associated fabrication methods,
- · can derive models for dielectric waveguide structures using the mode expansion method,
- · conceive the principles of directional couplers, multi-mode interference couplers, and waveguide gratings,
- can mathematically describe active waveguides and waveguide bends.

Content

- 1. Introduction: Optical communications
- 2. Fundamentals of wave propagation in optics: Maxwell's equations in optical media, wave equation and plane waves, material dispersion, Kramers-Kroig relation and Sellmeier equations, Lorentz and Drude model of refractive index, signal propagation in dispersive media.
- 3. Slab waveguides: Reflection from a plane dielectric boundary, slab waveguide eigenmodes, radiation modes, interand intramodal dispersion, metal-dielectric structures and surface plasmon polariton propagation.
- 4. Planar integrated waveguides: Basic structures of integrated optical waveguides, guided modes of rectangular waveguides (Marcatili method and effective-index method), basics of numerical methods for mode calculations (finite difference- and finite-element methods), waveguide technologies in integrated optics and associated fabrication methods
- 5. Optical fibers: Optical fiber basics, step-index fibers (hybrid modes and LP-modes), graded-index fibers (infinitely extended parabolic profile), microstructured fibers and photonic-crystal fibers, fiber technologies and fabrication methods, signal propagation in single-mode fibers, fiber attenuation, dispersion and dispersion compensation
- 6. Waveguide-based devices: Modeling of dielectric waveguide structures using mode expansion and orthogonality relatons, multimode interference couplers and directional couplers, waveguide gratings, material gain and absorption in optical waveguides, bent waveguides

Module grade calculation

The module grade is the grade of the oral exam.

There is, however, a bonus system based on the problem sets that are solved during the tutorials: During the term, 3 problem sets will be collected in the tutorial and graded without prior announcement. If for each of these sets more than 70% of the problems have been solved correctly, a bonus of 0.3 grades will be granted on the final mark of the oral exam.

Workload

Total 120 h, hereof 45 h contact hours (30 h lecture, 15 h tutorial) and 75 h homework and self-studies.

Recommendation

Solid mathematical and physical background, basic knowledge of electrodynamics

5 CR Hohmann

7.152 Module: Optimization of Dynamic Systems [M-ETIT-100531]

Responsib Organisatio		Prof. DrIng. Sören Hohmann KIT Department of Electrical Engineering and Information Technology								
Part	Fiel Fiel	Field of Specialization / Field of Specialization: Industrial Automation (mandatory) Field of Specialization / Field of Specialization: Control Engineering in Mechatronics (mandatory) Field of Specialization / Field of Specialization: Robotics (mandatory) Interdisciplinary Subject								
	Credits 5	Grading scale Grade to a tenth	Recurrence Each winter term	Duration 1 term	Language English	Level 4	Version 1			

Competence Certificate

The assessment consists of a written exam (120 min) taking place in the recess period.

Optimization of Dynamic Systems

Prerequisites

T-ETIT-100685

none

Competence Goal

- The students know as well the mathematical basics as the fundamental methods and algorithms to solve constraint and unconstraint nonlinear static optimization problems.

- They can solve constraint and unconstraint dynamic optimization by using the calculus of variations approach and the Dynamic Programming method.

- Also they are able to transfer dynamic optimization problem to static problems.

- The students know the mathematic relations, the pros and cons and the limits of the particular optimization methods.

- They can transfer problems from other fields of their studies in a convenient optimization problem formulation and they are able to select and implement suitable optimization algorithms for them by using common software tools.

Content

The module teaches the mathematical basics that are required to solve optimization problems. The first part of the lecture treats methods for solving static optimization problems. The second part of the lecture focuses on solving dynamic optimization problems by using the method of Euler-Lagrange and the Hamilton method as well as the dynamic programming approach.

Module grade calculation

The module grade is the grade of the written exam.

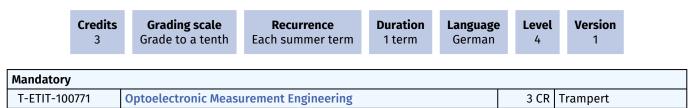

Workload

Each credit point stands for an amount of work of 30h of the student. The amount of work includes

- 1. presence in lecture/exercises/tutorial(optional) (2+1 SWS: 45h1.5 LP)
- 2. preparation/postprocessing of lecture/exercises (90h3 LP)
- 3. preparation/presence in the written exam (15h0.5 LP)

M 7.153 Module: Optoelectronic Measurement Engineering [M-ETIT-100484]

Responsible:	DrIng. Klaus Trampert
Organisation:	KIT Department of Electrical Engineering and Information Technology
Part of:	Interdisciplinary Subject

Prerequisites

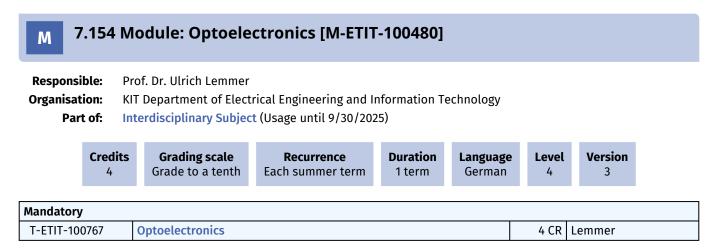

none

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Based on 15 courses per semester, each with 1.5 h presence in the lecture, 2.5 h each Before and after, as well as approx. 2 hours of literature reading and self-exercises, the total workload is 90 hours

Competence Certificate

The success check is carried out in the context of a written exam (90 minutes).

Prerequisites

none

Module grade calculation

The module grade is the grade of the written exam.

Workload

- 1. Presence time in lectures, exercises: 32 h
- 2. Preparation / Post-processing of the same: 48 h
- 3. Exam preparation and presence in same: 40 h

7.155 Module: Organ Support Systems [M-MACH-102702]								
Responsi Organisat		•	pl. Prof. Dr. Christian Pylatiuk IT Department of Mechanical Engineering					
Part of: Credi 4		Inte	d of Specialization / erdisciplinary Subject litional Examinations		: Medical Tec	hnology (ma	ndatory)	
		its	Grading scale Grade to a tenth	Recurrence Each summer term	Duration 1 term	Language German	Level 4	Version 1
Mandatory	,							
T-MACH-105228 Organ Support Systems 4 CR Pylatiuk								

Competence Certificate

A performance assessment is held in form of a written examination of 45 minutes.

Prerequisites

none

Competence Goal

Students have comprehensive knowledge of the functioning of support systems and their components (e.g. sensors, actuators) for different human organs (e.g. heart, kidney, liver, eye, ear, locomotor system). They know the physical basics, the technical solutions and the essential aspects of these medical technology systems and their current limitations. Furthermore, they know bioreactors and other methods of using the body's own cells to support organs (tissue engineering). Furthermore, they have comprehensive knowledge of organ transplantation and its limitations.

Content

Hemodialysis, liver dialysis, heart-lung machine, artificial hearts, biomaterials, definition and classification of organ support and organ replacement, hearing prostheses, visual prostheses, exoskeletons, neuroprostheses, endoprostheses, tissue engineering.

Module grade calculation

The module grade is the grade of the written exam.

Workload

- 1. Attendance time Lecture: 15 * 2h = 30h
- 2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
- 3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Recommendation

The content of module MMACH-105235 complements this lecture.

T-ETIT-111013	Physical and Data-Based Modelling	6 CR	Hohmann	
				_

Competence Certificate

Oral examination of approximately 20 minutes.

Prerequisites none

Competence Goal

- The students understand the general model concept as well as the characteristics of physical and data-based modeling and can describe their differences.
- They are able to structure complex systems and systematically analyze dependencies of subsystems.
- They are able to explain the general procedure of physical and data-based modeling, apply it to technical systems, and analyze the results.
- They are able to apply causal and non-causal modeling approaches and distinguish between them.
- Students have gained an understanding of generalized, cross-domain, physical relationships and can develop models for electrical, mechanical, pneumatic and hydraulic systems. They can identify states and constraints.
- They can describe the relationship between generalized, cross-domain, physical models and basic procedures of
 physical-based control and explain their advantages / limitations based on basic knowledge of control engineering.
- They are able to explain different identification procedures for parametric models of static and dynamic systems, select, and apply appropriate procedures for given technical problems.
- Students know basic procedures of learning-based identification and can describe their limitations.
- The students can estimate and judge the effects of disturbances and real conditions on the identification results.

Content

In contrast to the former "Modellbildung und Identifikation", this course requires a profound knowledge in multivariable systems and optimization. Thus, attendance of the lecture Optimization of Dynamic Systems (ODS) is an absolute precondition to appropriately follow the course! Prior knowledge about (linear) state space representations and realizations, the concept of "zeros" in the state space, and observability is highly recommended!

This course aims at engineering students that focus on a systemic and control engineering curriculum. It encompasses fundamental topics along the complete process of modeling technical systems. Particularly, two major areas will be covered:

On the one hand, physical-based modeling techniques which derive formal model equations based on analyzing the physical first-principles of technical systems. This includes, inter alia, generalized equivalent circuits, bond graphs, port-Hamiltonian systems, variational analysis (Euler-Lagrange of the first kind). Selected topics of physical-based control methods will also be briefly introduced to integrate the complete physical control design in the wider control context and highlight its possible benefits.

On the other hand, data-based identification techniques will be covered which are used to identify concrete model parameters for a given technical system from experimental data sets. When combining the identification with an initial, non-physical, structural set up of model equations, the complete process is often referred to as data-based modeling or black-box modeling.

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Each credit point corresponds to 30 hours of workload (of the student). The workload includes:

- 1. attendance time in lecture/exercise (3+1 SWS: 60h 2 LP)
- 2. pre-/postprocessing of the lecture (90h 3 LP)
- 3. preparation/attendance oral exam (30h 1 LP)

Recommendation

In contrast to the former "Modellbildung und Identifikation", this course requires a profound knowledge in multivariable systems and optimization. Thus, attendance of the lecture Optimization of Dynamic Systems (ODS) is an absolute precondition to appropriately follow the course! Prior knowledge about (linear) state space representations and realizations, the concept of "zeros" in the state space, and observability is highly recommended (see e.g. Regelung linearer Mehrgrößensysteme (RLM))!

Furthermore, sound understanding of Higher Mathematics I-III, linear electrical network theory and engineering mechanics / physics is required to successfully attend the lecture, exercise tasks / case studies, and exam.

7.159 Module: Physiology and Anatomy for Biomedical Engineering [M-ETIT-105874]

Responsil Organisati Part	ion: : of:	KIT Department of Electrical Engineering and Information Technology								
	Credit 6	ts	Grading scale Grade to a tenth	Recurrence Each winter term	Duration 2 terms	Language German	Level 4	Version 2		
Mandatory										

T-ETIT-111815 Physiology and Anatomy for Biomedical Engineering	6 CR	Nahm

Competence Certificate

The exmaniation is carried out in the form of a written test of 120 minutes.

The examination includes the contents of Physiologie und Anatomie I (offered every winter term) and Physiologie und Anatomie II (offered every summer term).

Prerequisites

The modules "M-ETIT-100390 - Physiologie und Anatomie I" and "M-ETIT-100391 - Physiologie und Anatomie II" must not been started.

Competence Goal

After studying this module

- students will be able to describe and explain the basic structural and functional principles of the organism at various levels of organization (molecular and cellular to organ and organ system level) in order to classify the organism in its environment,
- have the ability to apply this knowledge to explain higher-level organ and organ system functions,
- know advanced mathematical, scientific and engineering methods for describing physiological processes and are able to apply them,
- be able to describe the functional relationships at the organ and organ system level from a diagnostic and
- therapeutic perspective and derive the requirements for medical technology systems from this
 and can identify the sources of biosignals and derive connections between physiological parameters and physical measured variables.

Sustainability competence objective: The students have actively shaped their learning process.

Content

Physiologie und Anatomie I (winter semester)

This course provides basic knowledge of the major human organ systems and medical terminology. It is intended for students of technical courses who are interested in physiological issues.

Topic blocks:

- Organizational levels of the organism
- Building blocks of life
 - Proteins
 - Lipids
 - Carbohydrates
 - Lipids
 - Nuleic acids
- Cells
 - Structure
 - Membrane transport processes
 - Protein biosynthesis
 - Cell respiration
 - Nerve cells
 - Muscle cells
- Tissue
 - Tissue types
 - Cell connections
- Sensory organs
 - ∘ Eye
 - Hearing

Physiologie und Anatomie II (summer term)

This course expands on the knowledge taught in the first part of the course and introduces additional human organ systems.

Topic blocks:

- The nervous system
 - Anatomy and functional structure
- The cardiovascular system
 - Anatomy and function of the heart
 - Vascular system and blood pressure
- The respiratory system
 - Anatomy and ventilation
 - Gas transport
- The digestive system
 - ∘ Anatomy
 - Physiology of digestion
- The endocrine system
 - Endocrine organs
 - Hormonal signal transduction
- Acid-base balance
- Water-electrolyte balance
- Thermoregulation

Module grade calculation

The module grade is the grade of the written exam.

Bonus points can be awarded for a student contribution to the lecture.

- The student contribution consists of the formulation of learning objectives and questions to check the learning objectives for the lecture units. The corresponding lecture units are made available for selection in ILIAS.
- The students create the student contributions in small groups. They submit their contribution in the form of a PowerPoint presentation in ILIAS by the specified deadline.
- The presentation will be corrected and approved by the lecturer or course tutor if necessary.
- The contribution will be presented by the group in the following lecture unit within the specified period and discussed with the plenum. If necessary, the presenting group takes on board the feedback and creates a revised vision. The final version of the contribution is made available to all lecture participants in ILIAS for exam preparation.
- Bonus points are awarded by the lecturer on the basis of the written paper and the presentation in the plenary session.
- Each participant can earn a maximum of 6 bonus points. Bonus points can only be earned once.
- Participation in the student contributions is voluntary.

The bonus points are credited as follows:

- A maximum of 6 points can be credited to the exam result for the bonus task passed.
- The grade can thus be improved by a maximum of one grade step.
- The total number of points remains limited to 120 points. The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for any examinations taken at a later date.

Annotation

This module is part of the Orientation Exam of SPO BSc Medizintechnik § 8. The examination must be taken by the end of the 2nd semester. A repeat examination must be taken by the end of the 3rd semester.

Workload

The workload includes:

- Attendance time in lectures (2 h, 30 appointments each) = 60 h
- Self-study (3 h, 30 appointments each) = 90 h
- Preparation / post-processing = 30 h

Total effort approx. 180 hours = 6 LP

Learning type Winter/summer term:

- WT: Physiologie und Anatomie I
- ST: Physiologie und Anatomie II

Competence Certificate

Type of Examination: oral exam (approx. 20 minutes)

Prerequisites

none

Competence Goal

The students

- · understand the electronic and optical characteristics of organic semiconductors
- know the fundamental differences between organic and conventional inorganic semiconductors.
- · have basic knowledge of manufacturing and processing technologies,
- have knowledge of organic light-emitting diodes, organic solar cells and photodiodes, organic field-effect transistors and organic lasers.
- have an overview of the possible applications, markets and development lines for these components.
- are able to work in multidisciplinary teams with engineers, chemists and physicists

Content

- 1. Introduction
- 2. Optoelectronic properties of organic semiconductors
- 3. Organic light emitting diodes (OLEDs
- 4. Applications in Lighting and Displays
- 5. Organic FETs
- 6. Organic photodetectors and solar cells
- 7. Lasers and integrated optics

Module grade calculation

The module grade is the grade of the oral exam.

Annotation

Lecture and excersises are held as required in German or English.

Workload

- 1. lecture: 21 h
- 2. recapitulation and self-studie: 42 h
- 3. preparation of examniation: 27 h

Recommendation

Knowledge of semiconductor components

Power Electronics

Prerequisites

T-ETIT-109360

None

Competence Goal

Students will be familiar with state-of-the-art power semiconductors including their application related features. Furthermore students will be familiar with the circuit topologies for DC/DC and DC/AC power conversion. They know the associated modulation and control methods and characteristics. They are able to analyze the circuit topologies with regard to harmonics and power losses. This also includes the thermal design of power electronic circuits. In addition, they are able to select and combine suitable circuits for given electrical energy conversion requirements.

Content

In the lecture, power electronic circuits for DC/DC and DC/AC power conversion using IGBTs and MOSFETs are presented and analyzed. First, the basic properties of self-commutated circuits under idealized

conditions are elaborated using the DC/DC converter as an example. Then, self-commutated power converters for threephase applications are presented and analyzed with respect to modulation and their AC

and DC terminal behavior. Based on the real power semiconductor behavior in on- and off-state the device losses are calculated. Furthermore the thermal design of power converters is explained using thermal equivalent circuits of power devices and cooling equipment. The voltage and current stress on the power

semiconductors in switching operation is explained as well as protective snubber circuits allowing a reliable operation within the safe operating area of the devices.

In detail, the following topics are treated:

- Power Semiconductors
- Commutation principles
- DC/DC converters
- Self-commutated 1ph and 3ph DC/AC inverters
- Modulation methods (Fundamental frequency modulation, Pulse width modulation with 3rd harmonic injection, Space vector modulation)
- Multilevel inverters
- Switching behavior in hard and soft switching applications
- Loss calculation
- Thermal equivalent circuits, thermal design
- Snubber circuits.

The lecturer reserves the right to adapt the contents of the lecture to current needs without prior notice.

Module grade calculation

The module grade is the grade of the written exam.

Practical Aspects of Electrical Drives

Prerequisites

T-ETIT-100711

none

Competence Goal

Students understand the function of all components of modern electrical drive systems. They have detailed knowledge of the basic electrical machine types and know the function and physical behavior of loads and other drive components. Students will be able to design electrical drive systems for an application-specific use, taking into account all boundary conditions, and calculate their mechanical and electrical behavior.

Content

The lecture is divided into the following areas

- Drive systems
- electric motors
- Transmission elements
- Drive and load
- Starting, braking, positioning
- Thermal and protection
- Variable speed drives
- Electromagnetic compatibility
- Small drives
- Noise
- Drives with limited movement

Module grade calculation

The module grade is the grade of the written examination.

Annotation Shift from SoSe to WiSe, does not take place in WiSe24/25 and SoSe25.

Workload

14x lecture + 7x exercises of 1.5 h each = 31.5 h 14x post-processing of lectures à 1 h = 14 h 6x preparation of exercises à 2 h = 12 h Preparation for the exam = 50 h Total = 107.5 h (corresponds to 4 CP)

Recommendation

To understand the module, basic knowledge in the field of electrical machines is recommended (acquired, for example, by attending the modules "Electrical Machines and Power Electronics"

T-INFO-113393	Practical Course: Human-Centred Robotics	6 CR	Mombaur

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

Students learn to understand and scrutinize complex scientific topics and to reproduce and verify published results. They gain in-depth knowledge and practical experience in the field of motion generation and control of human-centered robots while working on a specific project task. They also learn how to plan, work together and communicate in a team. Students will be able to present their project results in a scientific presentation, demonstrate the practical results and answer detailed questions. They can also summarize their project results in writing using Latex in the style of a scientific paper and place them in a scientific context.

Content

Human-centered robots are robots that directly interact with humans or support humans in their motions. This includes humanoid robots, but also wearable robots (exoskeletons and prostheses) or external physical assistive devices. In this practical course, students learn how to implement theoretical knowledge about human-centered robots and use it to solve a given task based on a special project with robot hardware. Projects can either focus on code development for a given hardware or on the development or modification of robot hardware along with the basic code. Students learn about the challenges of working with real robot hardware vs model computations, and about working principles and practical implementation of sensors and actuators.

Annotation

Limited number of projects and participants. Specific project topics will be different each term and will be announced in a presentation during the first semester week.

Workload

Estimated effort for this module is 180 hours: 20h – In person events (kickoff meeting, individual meetings with supervisor, presentations) 130h – Individual project work 30h - Writing report and preparing presentation

Recommendation

Knowledge in Robotics (e.g. from the class Robotics 1 and follow-ups) are very helpful.

Competence Goal

Students learn to analyze and understand complex scientific topics in the area of human motion capture and motion analysis. They gain in-depth knowledge and practical experience with motion capture technology, experiment planning, and analysis. They also learn how to plan, work together and communicate in an interdisciplinary team. Students will be able to present their project results in a scientific presentation, demonstrate the practical results and answer detailed questions. They can also summarize their project results in writing using Latex and place them in a scientific context.

Content

In this joint course between Informatics and Sports Science, and in the sense of research-oriented teaching, students learn about current research projects of the BioRobotics Lab (Informatics) and the BioMotion Center (Sports Science) at the interface of interface of motor control and biomechanics of human movement. This research involves the use of latest motion capture technology, advanced analysis tools, and partly also assistive robotics technology. Students work in in teams (interdisplinary teams between students from different study programs are highly encouraged) to carry out motion capture experiments, analyze the results and present them in written and oral form. Depending on the specific project, these motion capture studies are either stand-alone studies just for this course or part of a larger research project at one of the organizing research groups.

Annotation

Limited number of projects and participants. Specific project topics will be different each term and will be announced in a presentation during the first semester week.

Competence Goal

- · After completing the module, students have in-depth knowledge in the field of machine learning.
- They have in-depth knowledge and an overview of various algorithms and methods in the field of machine learning.
 Students are able to describe different concepts and methods of machine learning and recognize connections
- between different algorithms.
 They are able to communicate with specialists in related disciplines in the field of machine learning and artificial intelligence and to formulate and evaluate solution approaches for tasks in this area.
- Students will gain practical experience in the field of machine learning through the semester-long team project. In particular, students will benefit from mutual feedback on their theoretical work at the end of the semester.

Content

Remarkable progress has been made in the field of artificial intelligence (AI) in recent years. Machine learning (ML) is a subdiscipline of AI that attempts to develop techniques that enable computers to learn from data. The goal of ML methods is to reliably abstract the underlying model for specific tasks.

This lecture covers the theoretical foundations as well as the basic concepts and techniques of machine learning, with a focus on problem solving and practical application. The course offers the opportunity to explore various ML algorithms and their applications in different areas, including computer vision, natural language processing and data mining.

During the course, you will have the opportunity to work on various application tasks and a group project in which you will apply the concepts you have learned to real-world data sets. You will learn how to use common libraries and tools for ML such as Scikit-Learn, TensorFlow and Keras and apply them to real-world datasets. You will also learn how to evaluate the performance of your models and interpret their results.

The lecture style will be a mix of theory and practical applications, with an emphasis on problem solving and hands-on experimentation. The theoretical part of the lecture will be offered as a block course at the beginning of the semester (early/mid April). Students then have the opportunity to work on a problem from the field of

ML alone or in small groups during the semester and present their results in the form of a scientific essay.

The quality assurance of the essay is carried out through a mutual peer review process in which students benefit from mutual feedback both from a technical point of view and with regard to the presentation of content.

The module covers the fundamentals and concepts of machine learning. Topics covered include the following:

- Introduction to machine learning and its applications.
- Data pre-processing and feature engineering techniques.
- Supervised and unsupervised learning algorithms.
- Deep learning techniques such as Convolutional Neural Networks and Recurrent Neural Networks.
- Transfer learning and Tiny ML.
- Evaluation metrics for ML models.
- Hyperparameter tuning and model selection techniques.
- Interpreting the results of ML models.
- ... other interesting topics.

Module grade calculation

The module grade results from the team project accompanying the semester and the presentation of the team project. The overall impression is assessed. Further details will be provided at the beginning of the course.

Workload

- Attendance of the lectures: approx. 21 hours
- Preparation and follow-up of the lecture: approx. 30 hours
- Team project during the semester: approx. 45 hours
- Peer review of the scientific essays and presentation of the team project: approx. 45 hours

Total: approx. 141 hours (5 CP)

Recommendation

Basic knowledge of mathematics and linear algebra (matrices, vectors, etc.) as well as basic knowledge of Python.

Learning type

Block lecture (2 SWS) and practical part (by arrangement within the framework of 1 SWS)

Competence Certificate

The examination takes place in form of other types of examination. It consists of an oral overall examination in the amount of 25 minutes and a homework programming task. The examination includes questions from the lecture slides and the presentation of the homework assignment. The homework must be submitted two weeks before of the oral exam. The overall impression is evaluated.

Prerequisites

T-ETIT-113628

none

Competence Goal

1. The students will be able to analyze, structure and formally describe problems in the field of practical control engineering.

- 2. The students are able to use the necessary tools for software projects with control engineering focus.
- 3. The students can apply the methods
- Modular software development for control engineering problems
- Model Predictive Controller for practical engineering problems
- Inevitable software engineering tools to able to develop control system

Practical Tools for Control Engineers

Content

- Practical examples from the control engineering problems and modelling tool
 - Robotics examples
 - Human-machine interaction
 - Automotive
- Control solution concepts for these practical problems
- Software development tool

Module grade calculation

The module grade results of the assessment of the oral exam and of the homework programming task. Details will be given during the lecture.

Workload

The workload includes 2 SWS:

- 1. attendance in lectures and exercises: 15*2 h = 30 h
- 2. preparation / follow-up: 15*2,5 h = 37,5 h
- 3. preparation of the homework assignment: 22,5 h
- 4. preparation of and attendance in examination: 30 h

<u>Sum: 120 h = 4 CR</u>

Recommendation

The contents of the modules "Optimization of Dynamic Systems (ODS)" and "Regelung linearer Mehrgrößensysteme (RLM)" are helpful for the lecture.

7.177 Module: Practical Training in Basics of Microsystem Technology [M-Μ MACH-1054791

c	Credits 4	Grading scale Grade to a tenth	Recurrence Each term	Duration 1 term	Language German	Level 4	Version 1	
Mandatory								
T-MACH-102164	Pra	actical Training in Basi	ics of Microsyst	em Technolog	şy	4 CR	Last	

Competence Certificate

Written exam, 60 min.

Prerequisites

None

Competence Goal

Insight into the real, practical work at the Institute of Microstructure Technology.

Content

- In the practical training includes nine experiments:
- 1. Hot embossing of plastics micro structures
- 2. Micro electroforming
- 3. X-ray optics
- 4. UV-lithography
- 5. Fluidic polymer components by example of a microfluidic mixer
- 6. Additive prototyping of microstructures
- 7. Introduction to SAW biosensors
- 8. Light diffraction at photomasks
- 9. Atomic force microscopy
- 10. Centrifugal microfluidics

Each student takes part in only five experiments. The experiments are carried out at real workstations at the IMT and coached by IMT-staff.

Annotation

The internship takes place in the laboratories of the IMT at the CN. Meeting place: Building 307, room 322.

Participation requests to Mrs. Novotny, marie.nowotny@kit.edu

Workload

regular attendance: 20 hours self-study: 100 hours, Preparation of the five experiments

Recommendation

Attend at least one of the lectures Micro System Technology I or II. Read the practical course documents provided as pdf-file!

Learning type

Lab, Self-study of the internship documents and guided experiments during the course.

Literature

Madou, M. (2003). Fundamentals of Microfabrication. CRC. ISBN 978-0849308260. Practical course documents provided as pdf-file.

M 7.178 Module: Principles of Medicine for Engineers [M-MACH-102720]

Responsible:	apl. Prof. Dr. Christian Pylatiuk
Organisation:	KIT Department of Mechanical Engineering

Part of: Field of Specialization / Field of Specialization: Medical Technology (mandatory) Interdisciplinary Subject Additional Examinations

	edits 4	Grading scale Grade to a tenth	Recurrence Each winter term	Duration 1 term	Language German	Level 4	Version 1	
Mandatory								
T-MACH-105235 Principles of Medicine for Engineers						4 CR	Pylatiuk	

Competence Certificate

A performance assessment is held in form of a written examination of 45 minutes.

Prerequisites

none

Competence Goal

Students have a comprehensive understanding of the functioning and anatomical construction of organs, which are assigned to different medical disciplines. Furthermore, they know the physical basics, the technical solutions and the essential aspects of the application of medical technology procedures in diagnostics and therapy. They are familiar with common clinical pictures in the different medical disciplines and their relevance in health care. Through their acquired knowledge, students can communicate with physicians about medical-technical procedures and assess mutual expectations more realistically.

Content

Definition of disease and health and history of medicine, evidence-based medicine" and personalized medicine, nervous system, conduction, musculoskeletal system, cardiovascular system, anesthesia, respiratory system, sensory organs, gynecology, digestive organs, surgery, nephrology, orthopedics, immune system, genetics.

Module grade calculation

The module grade is the grade of the written exam.

Workload

- 1. Attendance time Lecture: 15 * 2h = 30h
- 2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
- 3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Recommendation

The content of module MMACH-105228 complements this lecture.

Competence Certificate

Written exam, duration approximately 90 minutes.

Auxiliary means: none

Competence Goal

The students have an overview of the entire development process of a passenger car. In addition to the chronological sequence of passenger car development, they also know the national and international legal requirements. They have knowledge of the conflict of objectives between aerodynamics, thermal management and design. They will be able to assess conflicting goals in the area of passenger car development and work out possible solutions.

Content

- 1. Process of automobile development
 - 2. Conceptual dimensioning and design of an automobile
 - 3. Laws and regulations National and international boundary conditions
 - 4. Aero dynamical dimensioning and design of an automobile I
 - 5. Aero dynamical dimensioning and design of an automobile II
 - 6. Thermo-management in the conflict of objectives between styling, aerodynamic and packaging guidelines I
 - 7. Thermo-management in the conflict of objectives between styling, aerodynamic and packaging guidelines

Workload

The total work load for this module is about 60 Hours (2 Credits). The partition of the work load is carried out according to the credit points of the courses of the module. The work load for courses with 2 credit points is about 60 hours.

Competence Certificate

Written exam, duration: approximately 90 minutes.

Auxiliary means: none

Competence Goal

Students are familiar with the selection of suitable materials and with various manufacturing techniques. They have an overview of the acoustics of the vehicle. They are familiar with both the aspects of acoustics in the interior of the vehicle and the aspects of exterior noise. They are familiar with testing the vehicle and assessing the overall vehicle characteristics. They are able to participate competently in the development process of the entire vehicle.

Content

- 1. Application-oriented material and production technology I
- 2. Application-oriented material and production technology II
- 3. Overall vehicle acoustics in the automobile development
- 4. Drive train acoustics in the automobile development
- 5. Testing of the complete vehicle
- 6. Properties of the complete automobile

Workload

The total work load for this module is about 60 Hours (2 Credits). The partition of the work load is carried out according to the credit points of the courses of the module. The work load for courses with 2 credit points is about 60 hours.

Competence Certificate

Written examination (processing time: 120 min + 10 min reading time)

Prerequisites

None

Competence Goal

The students are able to ...

- classify product development in companies and differentiate between different types of product development.
- name the relevant influencing factors of a market for product development.
- name, compare and use the central methods and process models of product development within moderate complex technical systems.
- explain problem solving techniques and associated development methods.
- explain product profiles and to differentiate and choose suitable creative techniques of solution/idea generation finding on this basis.
- use design guidelines to create simple technical systems and to explain these guidelines.
- name and compare quality assurance methods; to choose and use suitable methods for particular applications.
- explain the differents methods of design of experiment.
- explain the costs in development process.

Content

Basics of Product Development: Basic Terms, Classification of the Product

Development into the industrial environment, generation of costs / responsibility for costs

Concept Development: List of demands / Abstraction of the Problem Definition / Creativity Techniques / Evaluation and selection of solutions

Drafting : Prevailing basic rules of Design / Design Principles as a

Competence Certificate

A performance assessment (non-graded) is obligatory and can be oral, a written exam, or of another kind.

Prerequisites

None

Competence Goal

The students acquire in the lab profound knowledge about the scientific theories, principles and methods of Production Engineering. Afterwards they are able to evaluate and design complex production systems according to problems of manufacturing and process technologies, materials handling, handling techniques, information engineering as well as production organisation and management.

After completion this lab, the students are able

- to analyse and solve planning and layout problems of the discussed fields,
- to evaluate and configure the quality and efficiency of production, processes and products,
- to plan, control and evaluate the production of a production enterprise,
- to configure and evaluate the IT architecture of a production enterprise,
- to design and evaluate appropriate techniques for conveying, handling and picking within a production system,
- to design and evaluate the part production and the assembly by considering the work processes and the work places.

Content

The production technique laboratory (PTL) is a collaboration of the institutes wbk, IFL, IMI and ifab.

- 1. Computer Aided Product Development (IMI)
- 2. Computer communication in factory (IMI)
- 3. Production of parts with CNC turning machines (wbk)
- 4. Controlling of production systems using PLCs (wbk)
- 5. Automated assembly systems (wbk)
- 6. Optical identification in production and logistics (IFL)
- 7. RFID identification systems (IFL)
- 8. Storage and order-picking systems (IFL)
- 9. Design of workstations (ifab)
- 10. Time study (ifab)
- 11. Accomplishment of workplace design (ifab)

Competence Certificate

Coursework: Final report

Prerequisites

none

Competence Goal

The student

- can model problems of product development including their partial aspects (market, technology, product).
- can systematically design and conduct experiments for the validation of product models and interpret the results in a targeted manner.
- can select development methods specific to the situation and adapt them to realistic tasks.

Content

The course ProVIL is carried out as an innovation project with 4 phases and a realistic task definition. Students develop their own product concepts in a team using the latest hardware and software and execute the following activities:

- · Analysis of the existing market and the environment of a product area
- Implementation and application of creativity methods and problem solving techniques
- Modelling of customer and user benefits as product profiles
- Validation of product profiles for target customer markets
- · Generation of solution ideas for the technical implementation of the product profiles
- Visualization of user stories based on product videos
- · Implementation of the selected ideas in functional prototypes and mock-ups
- · Evaluation of the functional prototypes by planning, execution, evaluation and interpretation of suitable tests
- · Presentation of the prototypes in a final event

Competence Certificate

Written Exam (60 min)

Prerequisites

None

Competence Goal

The students ...

- · are capable to comment on the content covered by the module.
- are capable of substantially quality philosophies.
- are able to apply the QM tools and methods they have learned about in the module to new problems from the context of the module.
- are able to analyze and evaluate the suitability of the methods, procedures and techniques they have learned about in the module for a specific problem.

Content

Based on the quality philosophies Total Quality Management (TQM) and Six-Sigma, the module will specifically address the needs of a modern quality management. The process orientation in a modern company and the process-specific fields of quality assurance are presented in detail. Preventive as well as non-preventive quality management methods, which are state of the art in operational practice today, are content of the module. The use of suitable measurement techniques in production engineering (production measurement technology) as well as their potential levels of integration in the production system are discussed. The use of suitable statistical methods for data analysis and their modern extension by methods of artificial intelligence are be discussed. The contents are complemented by legal aspects in the field of quality management.

Main topics of the module:

- The term "Quality"
- Total Quality Management (TQM)
- Six-Sigma and universal methods and tools within the DMAIC cycle
- QM in early product stages Determination and realization of customer requirements
- QM in product development
- Production measurement Technology
- QM in production statistical Methods
- Artificial intelligence and machine learning in quality Management
- Operating behaviour and reliability
- Legal aspects in QM

Competence Certificate

written examination in German language Duration: 60 minutes No tools or reference materials may be used during the exam except calculator and dictionary

Prerequisites

none

Competence Goal

- The students understand relations and interdependencies between rail vehicles, infrastructure and operation in a rail system.
- Based on operating requirements and legal framework they derive the requirements concerning a capable infrastructure and suitable concepts of rail vehicles.
- They recognize the impact of alignment, understand the important function of the wheel-rail-contact and estimate the impact of driving dynamics on the operating program.
- They evaluate the impact of operating concepts on safety and capacity of a rail system.
- They know the infrastructure to provide power supply to rail vehicles with different drive systems.

Content

- 1. Railway System: railway as system, subsystems and interdependencies, definitions, laws, rules, railway and environment, economic impact
- 2. Operation: Transportation, public transport, regional transport, long-distance transport, freight service, scheduling
- 3. Infrastructure: rail facilities, track alignment, railway stations, clearance diagram
- 4. Wheel-rail-contact: carrying of vehicle mass, adhesion, wheel guidance, current return
- 5. Vehicle dynamics: tractive and brake effort, driving resistance, inertial force, load cycles
- 6. Signaling and Control: operating procedure, succession of trains, European Train Control System, blocking period, automatic train control
- 7. Traction power supply: power supply of rail vehicles, comparison electric traction and diesel traction, dc and ac networks, system pantograph and contact wire, filling stations

written examination in German language Duration: 60 minutes No tools or reference materials may be used during the exam except calculator and dictionary

Prerequisites

none

Competence Goal

- The students learn the role of rail vehicles and understand their classification. They understand the basic structure und know the functions of the main systems. They understand the overall tasks of vehicle system technology.
- They learn functions and requirements of car bodies and jugde advantages and disadvantages of design principles. They know the functions of the car body's interfaces.
- They know about the basics of running dynamics and bogies.
- The students learn about advantages and disadvantages of different types of traction drives and judge, which one fits best for each application.
- They understand brakes from a vehicular and an operational point of view. They assess the fitness of different brake systems.
- They know the basic setup of train control management system and understand the most important functions.
- They specify and define suitable vehicle concepts based on requirements for modern rail vehicles.

Content

- 1. Vehicle system technology: structure and main systems of rail vehicles
- 2. Car body: functions, requirements, design principles, crash elements, coupling, doors and windows
- Bogies: forces, running gears, bogies, Jakobs-bogies, active components, connection to car body, wheel arrangement
 Drives: priciples, electric drives (main components, asynchronous traction motor, inverter, with DC supply, with AC
- supply, without line supply, multisystem vehicles, dual mode vehicles, hybrid vehicles), non-electric drives
- 5. Brakes: basics, principles (wheel brakes, rail brakes, blending), brake control (requirements and operation modes, pneumatic brake, electropneumatic brake, emergency brake, parking brake)
- 6. Train control management system: definition of TCMS, bus systems, components, network architectures, examples, future trends
- 7. Vehicle concepts: trams, metros, regional trains, intercity trains, high speed trains, double deck vehicles, locomotives, freight wagons

Competence Certificate

Examination performance oral Duration approx. 20 minutes Auxiliary means: none

Prerequisites

none

Competence Goal

The students have a basic understanding of train control and its technical implementation in Germany, the functioning of the European Train Control System (ETCS) and its planning, Automated Train Operation. They are able to explain the knowledge they have acquired (terms, interrelationships) in context and apply it to issues in practice. Furthermore, the students can classify the operational and technical advantages and disadvantages in the context of the digitalization of the rail network in Germany and take future challenges into account.

The students can discuss the technical aspects and areas of application of ETCS in the different levels and reproduce the main features of balise planning for ETCS Level 2. Digital planning approaches such as PlanPro as well as measurement and test runs are known and can be classified.

Content

1. introduction and motivation: organizational aspects; current developments in Germany, Europe

2. Basics of the railroad system: terminology; interaction of rolling stock, infrastructure and operations

3. Securing train movements: overview of possibilities and areas of application; operational and technical aspects with a focus on Germany

4. Basics of interlockings, control and safety elements: Train protection in Germany with PZB, LZB

5. Safety and security: EN5012x, CENELEC, RAMS

6. European Train Control System (ETCS): specification; system components, braking curves; ETCS level and modes, train integrity; interface between vehicle and infrastructure, data exchange; infrastructure-side ETCS balise planning using the example of ETCS level 2; track surveying, commissioning; digitization of the planning process using the example of PlanPro 7. Automatic Train Operation (ATO), Communication-Based Train Control (CBTC): system architecture, Grade of Automation (GoA); advantages and challenges ATO; differences CTBC to ETCS

8. Future Developments: Future Railway Mobile Communication System (FRMCS) as successor to GSM-R.

Competence Certificate

see partial performance

Prerequisites

None

Competence Goal

- · Acquiring skills in innovative business model development: Students acquire the ability to integrate their knowledge of product development into the development of innovative business models.
- · Understanding the connection between business models and global challenges: Students learn to understand and describe the connections between business models and current global challenges such as competitive pressure, decarbonisation and data sovereignty.
- · Development of technical foundations for servitisation business models: Students develop the necessary technical requirements for the development and introduction of different servitisation business models.
- · Ability to build industrial ecosystems: Students will learn to develop and present the fundamentals for building industrial ecosystems within business models.

Content

- · Integration of product-service systems: Focus on shaping the change to user-centred product-service systems in the coming decades.
- · Case study of TRUMPF machine tools: Discussion and analysis of the first industrial pay-per-part business model.
- Teamwork and idea exploration: students work in teams to explore and develop further ideas.
- · Practice-orientated workshop: Conclusion of the lecture with a workshop on product launch in European markets, allowing practical application of what has been learnt.

Competence Goal

- Students are able to understand the RL problem and challenges.

Grading scale

Grade to a tenth

- Students can differentiate between different RL algorithm and understand their underlying theory
- Students will know the mathematical tools necessary to understand RL algorithms
- Students can implement RL algorithms for various tasks
- Students understand current research questions in RL

Content

Reinforcement Learning (RL) is a sub-field of machine learning in which an artificial agent has to interact with its environment and learn how to improve its behaviour by trial and error. For doing so, the agent is provided with an evaluative feedback signal, called reward, that he perceives for each action performed in its environment. RL is one of the hardest machine learning problems, as, in contrast to standard supervised learning, we do not know the targets (i.e. the optimal actions) for our inputs (i.e. the state of the environment) and we also need to consider the long-term effects of the agent's actions on the state of the environment. Due to recent successes, RL has gained a lot of popularity with applications in robotics, automation, health care, trading and finance, natural language processing, autonomous driving and computer games. This lecture will introduce the concepts and theory of RL and review current state of the art methods with a particular focus on RL applications in robotics. An exemplary list of topics is given below:

- Primer in Machine Learning and Deep Learning
- Supervised Learning of Behaviour
- Introduction in Reinforcement Learning
- Dynamic Programming
- Value Based Methods
- Policy Optimization and Trust Regions
- · Episodic Reinforcement Learning and Skill Learning
- Bayesian Optimization
- Variational Inference, Max-Entropy RL and Versatility
- Model-based Reinforcement Learning
- Offline Reinforcement Learning
- Inverse Reinforcement Learning
- Hierarchical Reinforcement Learning
- Exploration and Artificial Curiosity
- Meta Reinforcement Learning

Workload

Approximately 180 hours, divided into:

- 45 hours of lecture attendance
- 15 hours of exercise attendance
- 90 hours of post-processing and working on exercise sheets
- 30 hours of exam preparation.

Recommendation

- Students should be familiar with the content of the "Foundations of Artificial Intelligence" lecture.
- Good Python knowledge is required.
- Good mathematical background knowledge is required.

7.192 Module: Reliability and Test Engineering [M-MACH-106050] Μ

Responsible:	DrIng. Thomas Gwosch Prof. DrIng. Sven Matthiesen

Mandatory							
T-MACH-111840	R	eliability and Test En	gineering			5 CR	Gwosch

Competence Certificate

The grade is composed of the evaluation of a final report following the practical part. The assessment criteria are as follows:

Structure of the report

- Comprehensibility and comprehensibility
- Preparation of the tests
- Use of test and reliability methods
- Formulation and answering of test hypotheses
- Test evaluation, comprehensible results

Attendance and active participation in the lab is mandatory.

Prerequisites

keine

Competence Goal

The students:

- know the relevance of reliability and test engineering in engineering practice.
- know the methods of reliability and test engineering and the components and tools used. •
- are able to carry out test planning, test execution and test interpretation for a given problem on a test bench by themselves.

Content

The students learn the methods of reliability and test engineering and the components used. Furthermore, they are able to independently carry out test planning, test execution and test interpretation for a given problem on a test bench.

The following contents are taught in the lecture:

- Relevance of reliability and test engineering in the industry.
- Overview of test equipment
- Test strategies and statistical test planning
- Testing with hypotheses
- Reliability models

The implementation of test planning, test execution and test interpretation on a demonstrator test bench is part of the practical session subsequent to the lecture (See also Event 2145351: Workshop for Reliability and Test Engineering).

Module grade calculation

The module grade is the grade of the examination performance of another type.

Annotation

In case of questions pleas contact lrt@ipek.kit.edu

The number of participants is limited, an application is necessary. For details please check the lab's web page https:// www.ipek.kit.edu/2976.php

Competence Certificate

The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation.

Prerequisites

None

Competence Goal

The student:

- understands the motivation and the global context of renewable energy resources.
- gains detailed knowledge about the different renewable resources and technologies as well as their potentials.
- understands the systemic context and interactions resulting from the increased share of renewable power generation.
- understands the important economic aspects of renewable energies, including electricity generation costs, political promotion and marketing of renewable electricity.
- is able to characterize and where required calculate these technologies.

Content

1. General introduction: Motivation, Global situation

- 2. Basics of renewable energies: Energy balance of the earth, potential definition
- 3. Hydro
- 4. Wind
- 5. Solar
- 6. Biomass
- 7. Geothermal
- 8. Other renewable energies
- 9. Promotion of renewable energies
- 10. Interactions in systemic context
- 11. Excursion to the "Energieberg" in Mühlburg

Workload

The total workload for this course is approximately 105.0 hours. For further information see German version.

Modeled Conditions

You have to fulfill one of 2 conditions:

- 1. The module M-INFO-102224 Practical Project Robotics and Automation I (Software) must not have been started.
- 2. The module M-INFO-102230 Practical Project Robotics and Automation II (Hardware) must not have been started.

Competence Goal

The student knows concrete solutions for different problems in robotics. He/she uses methods of inverse kinematics, grasp and motion planning, and visual perception. The student can implement solutions in the programming languages C++ and Python with the help of suitable software frameworks.

Content

The practical course is offered as an accompanying course to the lectures Robotics I-III. Every week, a small team of students will work on solving a given robotics problem. The list of topics includes robot modeling and simulation, inverse kinematics, robot programming via state charts, collision-free motion planning, grasp planning, robot vision and robot learning.

Workload

Practical course with 4 SWS, 6 LP 6 LP corresponds to 180 hours, including 2 hours introductory event 18 hours initial familiarization with the software framework 120 hours group work 40 hours attendance time

Recommendation

Attending the lectures Robotics I – Introduction to Robotics, Robotics II: Humanoid Robotics, Robotics III - Sensors and Perception in Robotics and Mechano-Informatics and Robotics is recommended.

See partial achivements (Teilleistung)

Prerequisites

See partial achivements (Teilleistung)

Competence Goal

The students are able to apply the presented concepts to simple and realistic tasks from robotics. This includes mastering and deriving the mathematical concepts relevant for robot modeling. Furthermore, the students master the kinematic and dynamic modeling of robot systems, as well as the modeling and design of simple controllers. The students know the algorithmic basics of motion and grasp planning and can apply these algorithms to problems in robotics. They know algorithms from the field of image processing and are able to apply them to problems in robotics. They are able to model and solve tasks as a symbolic planning problem. The students have knowledge about intuitive programming procedures for robots and know procedures for programming and learning by demonstration.

Content

The lecture provides an overview of the fundamentals of robotics using the examples of industrial robots, service robots and autonomous humanoid robots. An insight into all relevant topics is given. This includes methods and algorithms for robot modeling, control and motion planning, image processing and robot programming. First, mathematical basics and methods for kinematic and dynamic robot modeling, trajectory planning and control as well as algorithms for collision-free motion planning and grasp planning are covered. Subsequently, basics of image processing, intuitive robot programming especially by human demonstration and symbolic planning are presented.

In the exercise, the theoretical contents of the lecture are further illustrated with examples. Students deepen their knowledge of the methods and algorithms by independently working on problems and discussing them in the exercise. In particular, students can gain practical programming experience with tools and software libraries commonly used in robotics.

Workload

Lecture with 3 SWS + 1 SWS Tutorial, 6 LP 6 LP corresponds to 180 hours, including 15 * 3 = 45 hours attendance time (lecture) 15 * 1 = 15 hours attendance time (tutorial) 15 * 6 = 90 hours self-study and exercise sheets 30 hours preparation for the exam

Competence Goal

The students have an overview of current research topics in autonomous learning robot systems using the example of humanoid robotics. They are able to classify and evaluate current developments in the field of cognitive humanoid robotics.

The students know the essential problems of humanoid robotics and are able to develop solutions on the basis of existing research.

Content

The lecture presents current work in the field of humanoid robotics that deals with the implementation of complex sensorimotor and cognitive abilities. In the individual topics different methods and algorithms, their advantages and disadvantages, as well as the current state of research are discussed.

The topics addressed are: Applications and real world examples of humanoid robots; biomechanical models of the human body, biologically inspired and data-driven methods of grasping, imitation learning and programming by demonstration; semantic representations of sensorimotor experience as well as cognitive software architectures of humanoid robots.

Workload

Lecture with 2 SWS, 3 CP. 3 LP corresponds to approx. 90 hours, thereof: approx. 15 * 2h = 30 Std. Attendance time approx. 15 * 2h = 30 Std. Self-study prior/after the lecture approx. 30 Std. Preparation for the exam and exam itself

Recommendation

Having visited the lectures on Robotics I - Introduction to Robotics and Mechano-Informatics and Robotics is recommended.

Prerequisites

See partial achivements (Teilleistung)

Competence Goal

Students can name the main sensor principles used in robotics.

Students can explain the data flow from physical measurement through digitization to the use of the recorded data for feature extraction, state estimation and semantic scene understanding.

Students are able to propose and justify suitable sensor concepts for common tasks in robotics.

Content

The lecture supplements the lecture Robotics I with a broad overview of sensors used in robotics. The lecture focuses on visual perception, object recognition, semantic scene interpretation, and (inter-)active perception. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A basic distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive).

The second part of the lecture concentrates on the use of exteroceptive sensors in robotics. The topics covered include tactile exploration and visual data processing, including advanced topics such as feature extraction, object localization, semantic scene interpretation, and (inter-)active perception.

Workload

Lecture with 2 SWS, 3 LP 3 LP corresponds to 90 hours, including 15 * 2 = 30 hours attendance time 15 * 2 = 30 hours self-study 30 hours preparation for the exam

Recommendation

Attending the lecture Robotics I – Introduction to Robotics is recommended.

Competence Certificate

Examination of another type. The module grade is the grade of the brick. The description of the form of examination can be found in the description of the partial performance.

Prerequisites

None

Competence Goal

After successful completion of the course, the students are able to model and parameterise the requirements and boundary conditions for typical mechatronic systems. In addition, students learn the ability to select the appropriate procedures, processes, methods and tools for the development of a mechatronic system.

Important core competences in the areas of communication, problem solving and self-organisation are further essential components of the workshop, which enable the students to do reflected work independently and in a team.

Content

This module is designed to teach students how to develop a heterogeneous integrated mechatronic system. In the lecture, students are introduced to a system-oriented, higher-level approach to the description, assessment and development of a mechatronic system.

Parallel to this, the contents taught are applied and deepened in the practical part on hardware that is close to industry. The students learn the systematic development in a simulative environment as well as the transition from simulation to real hardware.

To achieve this, important components of software development in the robotics environment are taught. This includes, among other things, the basics of programming (Python) as well as the handling of the framework "Robot Operating System (ROS)". In addition, students gain insights into the use of sensors and actuators, image processing, autonomous navigation of automated guided vehicles and robotic grasping.

Prerequisites

None

Competence Goal

The students ...

- can name, describe and distinguish between different methods, procedures and techniques of production data analysis.
- can perform basic data analyses with the data mining tool KNIME.
- can analyze and evaluate the results of data analyses in the production environment.
- are able to derive suitable recommendations for action.
- are able to explain and apply the CRISP-DM model.

Content

In the age of Industry 4.0, large amounts of production data are generated by the global production networks and value chains. Their analysis enables valuable conclusions about production and lead to an increasing process efficiency. The aim of the modul is to get to know production data analysis as an important component of future industrial projects. The students get to know the data mining tool KNIME and use it for analyses. A specific industrial use case with real production data enables practical work and offers direct references to industrial applications. The participants learn selected methods of data mining and apply them to the production data. The work within the seminar takes place in small groups on the computer. Subsequently, presentations on specific data mining methods have to be prepared.

Annotation

The number of students is limited to twelve. Dates and deadlines for the seminar will be announced at https://www.wbk.kit.edu/studium-und-lehre.php.

Competence Certificate

Success is assessed in the form of a written paper, reviews and a presentation. The overall impression is assessed.

Prerequisites

T-ETIT-100753

none

Competence Goal

Seminar participants can independently familiarize themselves with a given technical topic, identify all relevant aspects and summarize the results. In this context, students can identify relevant literature in terms of the research question, assess the strengths and weaknesses of existing approaches and methods, and formally evaluate other works according to specified criteria. They can also suggest new aspects in line with the research question. They can present the results of their work concisely in the form of a short text (approx. 6-page paper, usually written in English) and an approx. 15-minute presentation in words and pictures (slides).

Content

In the "Embedded Systems" seminar, students work on a given topic from the field of information processing through literature and internet research under the guidance of research assistants and then present it to the other seminar participants in a short text (approx. 6-page paper, usually written in English) and a 15-minute presentation in words and pictures (slides). The students give each other feedback as part of a peer review and thus experience a part of the scientific publication process.

Module grade calculation

The grading is based on the elaboration, the mutual review and the presentation.

Seminar Embedded Systems

Workload

The workload includes:

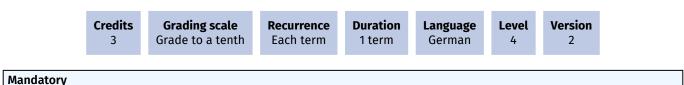

- 1. Independent familiarization with a topic: 50h
- 2. Writing a scientific article: 40h
- 3. Preparing a peer review: 10h
- 4. Preparing and giving a presentation: 20h

Total: 120h = 4 LP

7.202 Module: Seminar for Rail System Technology [M-MACH-104197]

Responsible:	Prof. DrIng. Martin Cichon
Organisation:	KIT Department of Mechanical Engineering

Part of: Interdisciplinary Subject

Manualory			
T-MACH-108692	Seminar for Rail System Technology	3 CR	Cichon

Competence Certificate

Examination: Writing an essay (Seminararbeit), final presentation

Prerequisites None

Competence Goal

- The students become aware of the fundamental relations and interdependencies between rail vehicles, infrastructure and operation in a rail system.
- They overview the technical components of a rail system, in particular rail vehicle technology.
- They are able to use the essential elements of scientific work and present their results in written form and verbal presentation.

Content

- 1. Railway System: railway as a system, subsystems and interdependencies, definitions, laws, rules, railway and environment, economic impact
- 2. Operation: Transportation, public transport, regional transport, long-distance transport, freight service, scheduling
- 3. System structure of railway vehicles: structure and major systems of rail vehicles
- 4. Scientific working: structuring and writing of scientific papers, literature research, scheduling (mile stones), selfmanagement, presentation skills, using the software Citavi for literature and knowledge management, working with templates in Word, giving and taking feedback
- 5. The learnt knowledge regarding scientific writing is used to elaborate a Seminararbeit. To this the students create a presentation, train and reflect it and finally present it to an auditorium.

Workload

Regular attendance: 21 hours Self-study (writing Seminararbeit): 65 hours Final presentation (including preparation): 4 hours total: 90 hours = 3 ECTS

Learning type Essay

Competence Certificate

The examination consists of a written journal article and an oral presentation of the student's work, both given in English. The overall impression is rated.

Prerequisites

none

Competence Goal

After completion of the seminar, students are able to independently familiarize themselves with a new research topic, recapitulate the corresponding literature and present the topic in the form of a review journal article as well as an oral overview presentation. Besides the exposure to new scientific research topics, the students will develope their know-how in scientific presentations and scientific writing in English which are key competences for their future (e.g. MSc thesis projects and research).

Content

We are offering an advanced seminar on "Novel Concepts for Solar Energy Harvesting" for students curious in latest research topics on devices, materials and physics of next generation solar energy harvesting. The students will get the opportunity to familiarize themselves with a state-of-the-art research topic of their choice under the guidance of a mentor and present the topic during the seminar. The students must attend the seminar regularly, present the research topic in a 30-min scientific talk and submit a short scientific paper (3-5 pages). The seminar addresses master students from electrical engineering, physics, mechanical engineering, material science, KSOP and related MSc programs.

Module grade calculation

The module grade results of the assessment of the written paper and the oral presentation. Details will be given during the lecture.

Workload

- 1. participation in the seminar lectures: 22,5 h
- 2. preparation of the seminar presentation: 50 h
- 3. preparation of the journal article: 47,5 h

Recommendation

Good knowledge of semiconductor components/optoelectronics is desirable.

The performance evaluation takes place by means of an overall examination according to § 4 Paragraph 2 No. 3 SPO-MA-2015, 2018 of the selected courses, the sum total of which fulfills the minimum requirement of course credits.

The examination takes place in the form of submission of a written report (paper) along with an oral presentation of the individual work.

Both are taken into account, while grading the examination performance. The overall impression will be evaluated.

Seminar Radar and Communication Systems

Prerequisites

none

Competence Goal

The students are provided with an overview of a broad range of topics in the field of radio frequency engineering. You are in a position to work independently in the following areas: carrying out literature research, the art of holding lectures and presentations and writing research papers. You can work in a self-organized manner and acquire communicative, organizational and initial-level didactic skills. You are given the opportunity to work independently on a radio frequency engineering topic, to analyze the topic and present it in front of an expert audience.

Content

The seminar in particular offers the opportunity to learn and sharpen the skills of holding lectures and oral presentations, conducting literature research and writing research papers. Although these skills constitute a decisive qualification in the professional life, they are seldom promoted in other courses. The seminar provides a remedial action in this regard: each participant works independently on a topic (predominantly in english language) and presents it in front of an expert audience. In the final discussion, besides technical aspects, presentation style and written report are also taken into consideration.

Apart from presenting the topic, the required written report in LaTeX provides an excellent preparation for fulfilling the requirements of scientific and technical thesis works.

Module grade calculation

The course grade is calculated on the basis of the presentation as well as the written report. Both are taken into account for the performance evaluation. An assessment will be made based on the overall impression.

Annotation

Not offered in WiSe 24/25

Workload

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

Literature research: 40 h

Writing of the paper: 40 h

Presentation including preparation: 40 h

A total of 120 h = 4 LP

Recommendation

Knowledge of fundamentals of radio frequency engineering are helpful.

M 7.206 Module: Seminar: Assistive robotics and exoskeletons in medical applications [M-INFO-106400]

Organisation: Part of:	KIT Department of Inf Field of Specialization		tion: Medical	Technology (Comple	ementary	Modules)
_	Field of Specialization	n / Field of Specializa	tion: Robotic	s (Complementary M	odules)

Mandatory			
T-INFO-112922	Seminar: Assistive robotics and exoskeletons in medical applications	3 CR	Mombaur

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

- The students know the state of the art of exoskeletons and assistive robots and current medical applications.
- Students are able to independently research, understand, critically evaluate and summarize scientific literature on a given topic (usually in English).
- Students will be able to prepare and deliver a scientific presentation, taking into account the level of knowledge of the other seminar participants, and to answer detailed questions on the topic
- Students will be able to ask questions about scientific presentations of other students and make active contributions to scientific discussions
- Students will be able to use Latex to create a scientific text (in English) incorporating the sources they have read.

Students are familiar with the DFG Code of Conduct "Guidelines for Safeguarding Good Scientific Practice" and successfully apply these guidelines in the preparation of their scientific work.

Content

This module provides an overview of the current state of the art and practical use of assitive robots and exoskeletons in medicine, as well as the potential of these technologies to improve patient care and the quality of life of people with and without physical impairments. Medical assistive robots are designed to perform a variety of healthcare tasks, such as assisting with surgeries or nursing care, reminding patients to take their medications, and monitoring patients' vital signs. Exoskeletons are designed to improve mobility and will be worn by people directly on their bodies to assist or completely replace their muscle strength. Some types of exoskeletons help people with mobility impairments to walk, stand and perform other physical activities to regain independence and participate in activities of daily living. Other types of exoskeletons are used by healthy people to prevent injuries in difficult working conditions. Mobility assistance robots for geriatric patients also exist in the form of robotic rollators designed to help their users to stand, walk, and navigate their surroundings in a safe and stable manner. Seminar topics cover the spectrum of different robot types and applications. Students can give their presentations in English or German as they prefer.

Competence Certificate

Success is assessed in the form of a written examination lasting 120 minutes.

Prerequisites

none

Competence Goal

After this module, students will have a sound basic knowledge of the main methods of signal processing as well as their areas of application, key parameters and the effects of parameter changes on the behavior of the methods. Students will be able to analyze given signal processing tasks in group work, develop solutions and document their results.

Content

The Digital Signal Processing practical course currently comprises eight experiments designed to familiarize students with the fundamentals of signal processing, in particular some selected measurement methods such as correlation measurement technology and modal analysis as well as Kalman filtering and the fundamentals of image processing. The focus of the experiments to be completed with various programs and devices is to teach students the practical aspects of modern signal processing.

Note: The lecturer reserves the right to include experiments other than those listed here in this practical course without prior notice.

Module grade calculation

The module grade is the grade of the written examination.

Annotation

A prerequisite for admission to the examination is the submission of protocols of all experiments. The quality of the protocols will be assessed; they must be acceptable for admission to the examination.

Attendance is compulsory during all practical sessions, including the introductory session. Admission to the examination will not be granted for even one unexcused absence.

Workload

The workload results from attending the introductory event (1.5 h), 8 experimental sessions of 4 h each. In addition, the preparation of the experiments is estimated at 8x4 h and the writing of the protocols as well as the follow-up work at 8x4 h. Preparing for the exam and attending it takes about 60 hours. This results in a total workload of approx. 160 hours.

Recommendation

Knowledge of the contents of the modules "Signals and Systems", "Measurement Technology" and "Methods of Signal Processing" is strongly recommended.

7.210 Module: Signal Processing Methods [M-ETIT-106899] Μ **Responsible:** Prof. Dr.-Ing. Sander Wahls **Organisation:** KIT Department of Electrical Engineering and Information Technology Part of: Interdisciplinary Subject Credits **Grading scale** Duration Language Level Version Recurrence Grade to a tenth Each winter term English 6 1 term 4 1 Mandatory T-ETIT-113837 Signal Processing Methods 6 CR Wahls

Competence Certificate

Written exam, approx. 120 minutes.

Prerequisites

none

Competence Goal

Students can

- · choose appropriate estimation methods based on theoretical properties and practical considerations
- determine estimators for specific problems
- can weight the pros and cons of data decomposition methods; apply them to given problems; interpret the results
- understand the advantages and limitations of the considered time-frequency analysis methods
- interpret time-frequency representations
- choose appropriate analysis and synthesis windows/wavelets
- determine time-frequency transforms of given signals

Content

This module introduces students to advanced signal processing methods that are widely employed in engineering. The three main topic areas are

- 1. Parameter estimation
- 2. Decomposition of data into components and modes
- 3. Time-frequency analysis

The following topics are treated:

- Best linear unbiased estimator
- · Maximum likelihood estimation
- · General Bayesian estimators
- · Linear Bayesian estimators
- · Principal component analysis
- · Independent component analysis
- Dynamic and empirical mode decomposition
- Hilbert spaces and frames
- · Short-time Fourier transform
- Wavelets
- · Analytic signals
- Wigner-Ville-Distribution
- Huang-Hilbert transform

Illustrating examples from diverse application areas are discussed.

Module grade calculation

The module grade is the grade of the written exam.

Workload

The workload includes:

- 1. attendance in lectures and tutorials: 15*4 h = 60 h
- 2. preparation / follow-up: 15*4 h = 60 h
- 3. preparation of and attendance in examination: 60 h

A total of 180 h = 6 CR

Recommendation

Familiarity with signals and systems (in particular, Fourier transforms) and probability theory at the Bachelor level is assumed.

M 7.211 Module: Signal Processing with Nonlinear Fourier Transforms and Koopman Operators [M-ETIT-106675]

Responsible:Prof. Dr.-Ing. Sander WahlsOrganisation:KIT Department of Electrical Engineering and Information TechnologyPart of:Interdisciplinary Subject

Cro	edits	Grading scale	Recurrence	Duration	Language	Level	Version
	6	Grade to a tenth	Each summer term	1 term	English	4	1
Mandatory							

Mandatory			
T-ETIT-113428	Signal Processing with Nonlinear Fourier Transforms and Koopman Operators	6 CR	Wahls

Competence Certificate

The examination in this module consists of programming assessments and a graded written examination of 120 minutes.

The programming assignments are either pass or fail. They must be passed during the lecture period for admission to the written examination.

Prerequisites

none

Competence Goal

Students

- understand the basic theory of linear operator on Hilbert spaces and can analyze simple operators analytically
- know the use cases for selected integrable partial differential equations (PDEs) and can apply them under non-ideal circumstances (small non-integrable terms)
- can determine the PDE corresponding to a given Lax-pair and check if the PDE is actually integrable (i.e. check if the Lax pair is "fake")
- understand the theory of nonlinear Fourier analysis for selected PDEs and can compute nonlinear (inverse) Fourier transforms numerically and, in simple cases, analytically
- know and implement practical engineering applications of nonlinear Fourier transforms
- · understand the theory of the Koopman operator including selected engineering applications
- compute Koopman spectra numerically using data-driven methods and use them in practical engineering applications

Content

This module introduces students to signal processing methods that rely on nonlinear Fourier transforms and Koopman operators. These methods allow us to transform large classes of nonlinear systems such that they essentially behave like linear systems. They can also be used to decompose signals driven by such systems into physically meaningful nonlinear wave components (for example, solitons).

While these methods originated in mathematical physics, there has been a growing interesting of exploiting their unique capabilities in engineering contexts. The goal of this module is to give engineering students a practical introduction to this area. It provides the necessary theoretical background, enables students to apply the methods in practice via computer assignments, and discusses recent research from the engineering literature.

The following topics will be discussed:

- · Introduction to linear operators on Hilbert spaces
- · Integrable model systems (Korteweg-de Vries equation, Nonlinear Schrödinger equation)
- · Lax-integrable systems (representations of Lax pairs, fake Lax pairs, conserved quantities)
- Solution of integrable model systems using nonlinear Fourier transforms (inverse scattering method) and the unified transform method
- · Physical interpretation of nonlinear Fourier spectra (in particular, solitons)
- · Practical applications of nonlinear Fourier transforms
- Theoretical properties of Koopman operators
- · Data-driven computation of Koopman operators (residual dynamic mode decomposition)
- · Practical applications of Koopman operators

Module grade calculation

The module grade is the grade of the written exam.

Annotation

Some tutorial sessions will be classically devoted to solving pen and paper problems, but in others students will be working on their practical computer assignments. For the latter, students have to bring their own laptops with Matlab installed. The solutions of the computer assignments must be submitted by the provided deadlines, which are typically one week after the corresponding tutorial has taken place.

Workload

The workload includes:

- 1. attendance in lectures and tutorials: 15*4 h = 60 h
- 2. preparation / follow-up: 30*3 h = 60 h
- 3. finishing programming assignments: 30 h
- 4. preparation of and attendance in examination: 30 h

A total of 180 h = 6 CR

Recommendation

Familiarity with signals and systems at the Bachelor level (Fourier and Laplace transforms, linear systems, etc.) is assumed.

M 7.212 Module: Simulation and Optimization in Robotics and Biomechanics [M-INFO-106504]

C	Credits 6	Grading scale Grade to a tenth	Recurrence Each winter term	Duration 1 term	Language English	Level	Version

T-INFO-113123	Simulation and Optimization in Robotics and Biomechanics	6 CR	Mombaur

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

The students

• can explain advanced principles of modeling, optimization and control of dynamic processes, in particular mechanical systems and can apply them

• can model, classify and analyze complex motions in robotics or biomechanics, and investigate specific properties such as stability.

• can apply nonlinear optimization and optimal control methods and can compare and evaluate different mathematical approaches.

• know how to use software tools based on C++ and Lua for modeling, simulation, optimization and visualization of humanoid and robotic systems

are capable of solving optimal control problems numerically and to evaluate the quality of the solution.

Content

The goal of this course is to give a practical introduction into simulation and optimization of motions in robotics and biomechanics. Simulation and optimization play an important role in generating and controlling motions in complex robotics systems and in predicting and analyzing motions of humans. Theory and methods will be covered, but the focus is on the use software tools for modeling, simulation, optimization and visualization of multibody systems. Topics covered include:

• Dynamic process modeling

- Transforming real world problems into mathematical models
- Modeling of complex robotics and biomechanics systems (e.g. humanoids), based on previous modeling knowledge
- · Common template models for bipedal walking and running in robotics and biomechanics
- Simulation of mechanical / robotics systems (Integrators and Initial value problems)
- Boundary value problems
- Nonlinear optimization problems
- Optimal control problems

• Direct and indirect methods for optimal control problems, focus on direct methods, especially direct multiple shooting

• Stability of dynamical systems, stability in biomechanics and robotics

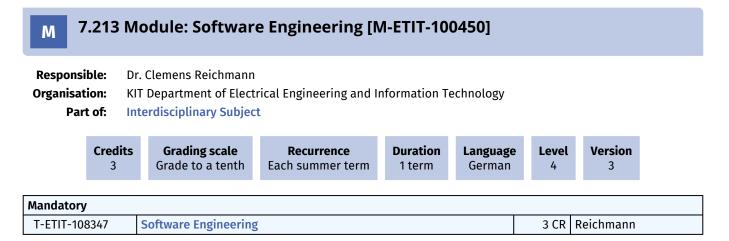

Annotation

M 7.215 Module: Solar Energy [M-ETIT-100524]								
Responsible: Organisation: Part of:		Prof. Dr. Bryce Sydney Richards KIT Department of Electrical Engineering and Information Technology Field of Specialization / Field of Specialization: Power Engineering (Complementary Modules) Interdisciplinary Subject						
	Cred 6	its	Grading scale Grade to a tenth	Recurrence Each winter term	Duration 1 term	Language English	Level 4	Version 1

Mandatory			
T-ETIT-100774	Solar Energy	6 CR	Richards

Competence Certificate

Type of Examination: written exam

Duration of Examination: 120 Minutes

Modality of Exam: One written exam at the end of each semester.

Prerequisites

Students not allowed to take either of the following modules in addition to this one: "Solarenergie" (M-ETIT-100476) and "Photovoltaik" (M-ETIT-100513).

Modeled Conditions

The following conditions have to be fulfilled:

1. The module M-ETIT-100513 - Photovoltaics must not have been started.

Competence Goal

The students:

• understand the basic working principle of pn-junction solar cells,

• learn about the different kinds of solar cells (crystalline and amorphous silicon, CIGS, Cadmium telluride, organic, dye-sensitized solar cells, etc.),

- get an overview over upcoming third-generation photovoltaic concepts,
- · receive information on photovoltaic modules and module fabrication,
- develop an understanding of solar cell integration and feeding the electrical power to the grid,
- get insight into solar concentration and tandem solar cells for highly efficient energy conversion,
- · compare photovoltaic energy harvesting with solar thermal technologies
- · understand the environmental impact of solar energy technologies.

Die Studentinnen und Studenten können in englischer Fachsprache sehr gut kommunizieren.

Content

I. Introduction: The Sun

II. Semiconductor fundamentals

III. Solar cell working principle

IV. First Generation solar cells: silicon wafer based

V. Second Generation solar cells: thin films of amorphous silicon, copper indium gallium diselenide, cadmium telluride, organic photovoltaics and dye sensitized solar cells

V. Third Generation Photovoltaics: high-efficiency device concepts incl. tandem solar cells

- VI. Modules and system integration
- VII. Cell and module characterization techniques
- VIII. Economics, energy pay-back time, environmental impact
- IX. Other solar energy harvesting processes, incl. thermal and solar fuels
- X. Excursion

Module grade calculation

The module grade is the grade of the written exam.

Workload

Total 180 h, thereof 60h contact hours (45h lecture, 15h problems class), and 120h homework and self-studies

Recommendation

Knowledge of optoelectronics is a prerequisite, e.g. M-ETIT-100480 – Optoelektronik.

Literature

M 7.216 Module: Spaceborne Radar Remote Sensing [M-ETIT-103042]

Responsible :	Prof. DrIng. Thomas Zwick
Organisation:	KIT Department of Electrical Engineering and Information Technology
Part of:	Interdisciplinary Subject

Credits	Grading scale Grade to a tenth	Recurrence Each summer term	Duration 1 term	Language English	Level	Version
0	Grade to a territri	Eddir Summer term	rterm	Eligiish	4	2

Mandatory			
T-ETIT-112857	Spaceborne Radar Remote Sensing - Exam	4 CR	Moreira, Prats
T-ETIT-112858	Spaceborne Radar Remote Sensing - Workshop	2 CR	Younis

Competence Certificate

The assessment takes place in the form of a written examination lasting 120 min. and in the form of reports (other types of examination). Those reports have to be submitted as part of the SAR computer workshop (approx. a total of five workshops). Details will be given during the lecture.

Prerequisites

"M-ETIT-100426 - Spaceborne SAR Remote Sensing" is not allowed to be started or to be completed.

Competence Goal

The students obtain a sound knowledge on the fundamentals, theory and applications of spaceborne radar systems. They understand the principle and function of synthetic aperture radars (SAR). They are able to explain the theory, techniques, algorithms for data processing and system concepts as well as to report on several application examples.

Content

The lecture is interdisciplinary and well suited for students interested in learning different aspects of the entire end-to-end system chain of spaceborne radar systems. Today, Synthetic Aperture Radar (SAR) systems are generating images of the Earth's surface with a resolution better than 1 meter. Due to their ability to produce high-resolution radar images independent of sunlight illumination and weather conditions, SAR systems have demonstrated their outstanding capabilities for numerous applications, ranging from environmental and climate monitoring, generation of three-dimensional maps, hazard and disaster monitoring as well as reconnaissance and security related applications. We have entered a new era of spaceborne and airborne SAR systems. New satellite systems like TerraSAR-X and TanDEM-X provide radar images with a resolution cell of more than a hundred times better than the one of conventional SAR systems. The lecture will cover all aspects of spaceborne radar systems including an overview of new technologies, applications and future developments.

Supporting the main lecture, exercise assignments are distributed to the students. The exercise solutions are presented and discussed in detail during lecture hall exercises. Further dedicated topics are explained to deepen the understanding of the main lecture contents.

The aim of the computer-workshop is to gain practical experience on radar systems using data and parameter simulations which are based on the evaluation of simplified models.

Module grade calculation

The module grade results of the assessment of the exam (4 LP) and the reports (2 LP).

Annotation

Further information can be found at the internet page of the IHE (https://s.kit.edu/ihe-srrs).

Workload

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. Workload (for a lecture)

Attendance time in lectures, exercises: 60 h

Present study time computer exercise: 40 h

Self-study time including exam preparation: 80 h

A total of 180 h = 6 LP

Recommendation

Signal processing and radar fundamentals.

Competence Certificate

This module consists of an approx. 60-minute written exam on the contents of the Entrepreneurship lectures, as well as 5 other types of exams on the contents of the seminar Entrepreneurship and Innovation Lab in the form of term papers and presentations. All exams results are graded.

In addition, smaller, ungraded term papers are due during the course to monitor progress.

Prerequisites

An application is required to participate in this module. Information about the application: www.kit-student-innovation-lab.de/index.php/for-students/

Competence Goal Personal competence

- Reflection faculty: The students are able to analyze, evaluate and develop an alternative for action for certain elements of action in social interaction
- Decision-making ability: The students are able to prepare a decision template in time and to provide the necessary arguments for alternative decisions and therefore are able to decide in time.
- Interdisciplinary teamwork
 Students are able to detect their limits of competence in one domain and to adjust to a the non-specialist domain.
 The students are able to detect a lack in competence and to compensate this lack via competences of other team
 members. The students are able to communicate their domain-specific knowledge and develop a basic
 understanding of other domains.
- Value-based action: The students are able to use selected psychological tools to determine their own values. They are able to match these values with team members and reflect if their offer fits these values.

Social competence

- Ability to cooperate: The students are able to analyze and judge their cooperative behavior in a group.
 Communication competence:
- The students are able to present their information in persuasive, focused and target group oriented way. • Ability to deal with conflicts:
- The students are able to detect conflicts in advance, analyze them and name solution concepts.

Innovation and entrepreneurship competence

- Agile product development:
 - The students are able to apply methods of agile product development e.g. Scrum.
- Methodical innovation retrieval:
- The students are able to conduct processes for user- and technology-centered innovation to develop sustainable value propositions for certain target groups (e.g. Design Thinking (DT), Technology Application Selection (TAS)-process).
- Orientation on management of new technology-based firms (NTBF): The students are able to name central concepts of intellectual property and legal structures. The students are able to name the most important tasks of entrepreneurial leadership. They are able to name the most common form of business modeling and to setup a business plan. The students know important approaches to establish an organization. The students are able to determine the ownership structure in an investment situation. The students are able to name marketing concepts and setup a business model.
- Generate investment readiness: The students are able to setup rudimentary revenue and cost plan. Furthermore, they are able to establish a project plan for a company in order to derive an investment plan. The students are able to present their business proposal to investors and develop empathy for the investors.
- Competence to develop a business model: The students are able to apply respective tools for business modeling e.g. Business Model Canvas. The students are able to develop and assess alternative business models.
- Risk handling:

The students are able to name basic risks w.r.t. requirements, technical limitations and profitability. The students are able to apply methods of customer interaction for evaluation of requirements and willingness to pay. The students are able to setup a rudimentary competitors analyze. The students are able to name and identify risks and present potential reactions.

Systemic technical competence

- Problem solution competence:
- The students are able to analyze, assess and structurally solve a technical problem.
- Agile methodology of system development:
- The students are able to name and apply different system development processes.
- Validation in volatile environment: The students are able to conduct technical and economical validation under volatile constraints. For this, they are able to name the constraints and interpret the results of the validation.
- Functional decomposition:
- The students are able to identify, interpret and derive functional requirements from complex customer needs. • Architecture development:
- The students are able to recognize coherences from the functional requirements and derive a suitable system architecture.

Content

This module strives to combine technical, social and personal competences from the technical and entrepreneurial domain. The objective is to prepare students as best as possible for entrepreneurial activity within or outside of an established organization. Our teaching methods are research-based with a practical orientation.

The lecture Entrepreneurship as the essential component offers the theoretical basis and provides insight in important theoretical concepts and empirical evidence. Currently released case studies and practical experiences of successful founders support the theoretical and empirical content. In order to run a company for the long term additional knowledge is important. That's why the lecture also teaches basic principles for opportunity recognition, business modeling, an introduction to entrepreneurial marketing and leadership. Customer-based design methods from the lean startup approach as well as methods of technology-centered innovation are presented. Future founders have to be able to develop and handle resources such as financial and human capital, infrastructure and intellectual property. Further aspects tackle the establishment of an organization and funding of the own project.

The knowledge taught in the lecture Entrepreneurship will be applied in an application-oriented seminar and the labs. Hence we use an action learning approach to extend the taught knowledge by practical skills and reflection capabilities. In an team of five, the students will experience their way from the ideation process to the final pitch in front of investors.

The students are able to choose between the following options concerning the labs:

- The Automation Innovation Lab offers drones as an innovation platform for cooperative swarm solutions.
- The Industry 4.0 Innovation Lab enables innovation in the context of the next industrial revolution via mobile robot platforms.
- In the Interconnected Intelligent Systems Lab innovations in the context of Assisted Living and Smart Housing are enabled by providing a rich assembly set of mobile robots, actuators and sensors.
- The Computer Vision for Health Lab offers a selection of state-of-the-art imaging devices and powerful computing hardware for innovative image-based applications for medicine and healthcare.

The module also presents methods of agile system development (Scrum) along with associated validation methods as well as methods for functional prototyping. Gate plans are used within the module to determine the progress of the project. Methods for single person work and teamwork are presented and applied. Additionally group-specific knowledge of the different roles of team members, solutions to conflict situations and interdisciplinary teams are presented.

Module grade calculation

The module grade consists of the written exam of the Lecture Entrepreneurship (40%), of the submissions and presentation of the Innovation Lab (40%) and of the submissions and presentation of the SIL Entrepreneurship Project (20%).

Annotation Related courses:

Lecture Entrepreneurship Seminar Entrepreneurship Project Innovation Labs Please note that the courses must be booked in parallel.

Related exams:

Written exams covering the content of lecture Entrepreneurship Presentation of the Value Profile (seminar Entrepreneurship) Submission of the Business Plan (seminar Entrepreneurship) Submission of a Technical Report with requirements list and system architecture (Innovation Lab) Submission of the reflection of the Gate Plans (Innovation Lab) Presentation of the High-fidelity (Innovation Lab)

Workload

Lecture Entrepreneurship: 32h attendance time, 48h preparation and follow-up time, 10h preparation time for assessment **Seminar Entrepreneurship:** 34h attendance time, 3h preparation and follow-up time, 53h preparation time for assessment. **Innovation Lab:** 8h attendance time, 213h preparation and follow-up time, 49h preparation time for assessment. This results in a total of 450 hours and a total of 15 LPs for both semesters (15*30/2 = 225).

Recommendation

It is recommended to attend the lecture Entrepreneurship at the same time as the seminar Entrepreneurship Project and the Innovation Lab in the winter semester.

7.219 Module: Superconducting Magnet Technology [M-ETIT-106684] Μ **Responsible:** Prof. Dr. Tabea Arndt **Organisation:** KIT Department of Electrical Engineering and Information Technology Part of: Interdisciplinary Subject Credits Grading scale Duration Language Level Version Recurrence Grade to a tenth English 4 Each summer term 1 term 4 1 Mandatory T-ETIT-113440 Superconducting Magnet Technology 4 CR Arndt

Competence Certificate

The examination takes place in form of an oral exam (abt. 30 minutes).

Two timeslots (weeks) for examination dates will be announced (usually near end of lecture period & end of semester)

Prerequisites none

Competence Goal

- The students have a solid knowledge of architecture and design aspects of applications in magnets, windings and coils in power engineering.
- For the most important magnet applications the students can apply the state of the art, choose between options and can reflect the main benefits.
- The students have a clear understanding of opportunities, benefits and limitations of superconducting windings and magnets.
- The students are able to perform the required design calculations and to solve fundamental design questions independently.

Content

As the materials become increasingly mature and powerful, using superconductivity in a variety of applications of electrical engineering is of rising interest and benefit, too. This module is focuses on Superconducting Magnet Technology:

Windings, coils and magnets may be used as a device by itself (providing high magnetic fields e.g. in MRI, NMR, accelerators, industry magnets, etc.) or as components for Power Systems.

This section will cover the following aspects:

- Unique selling points of superconducting windings.
- · Basic approaches and tools to design superconducting windings.
- Discussion of winding architectures
- Criteria to design the appropriate operating temperatures, materials, conductors, cooling technology for the electromagnetic purpose.
- · Limits and opportunities when preparing and operating superconducting windings.
- · Measures for safe operation of superconducting magnets.
- High-Field Magnets
- Magnets for Fusion Technology
- 3D topologies (e.g. in dipole magnets or motors/ generators)
- New options potentially offered by widespread use of hydrogen.
- New winding topologies

In the exercises, selected magnets will be designed and calculated analytically and with some computational tools (e.g. dipole magnets and compact, cryogen free HTS-magnets)

The lecturer may change the details of the content without further notice. Materials will be offered on ILIAS.

Module grade calculation

The module grade is the grade of the oral exam.

Workload

- 1. attendance in lectures and exercises: 15*3 h = 45 h
- 2. preparation / follow-up: 15*3 h = 45 h
- 3. preparation of and attendance in examination: 30 h

A total of 120 h = 4 CR

Recommendation

Having knowledge in "Superconducting Materials" is beneficial, but not mandatory.

7.220 Module: Superconducting Power Systems [M-ETIT-106683]

Responsible:	Prof. DrIng. Mathias Noe
Organisation:	KIT Department of Electrical Engineering and Information Technology
Part of:	Interdisciplinary Subject

	Credits	Grading scale	Recurrence	Duration	Language	Level	Version
	4	Grade to a tenth	Each winter term	1 term	English	4	1
Mandatory	/30	Superconducting Pow	er Systems			4 CR	Noe

Competence Certificate

The examination takes place in form of an oral exam (abt. 45 minutes).

Prerequisites

none

Competence Goal

- The students have a solid knowledge of architecture and design aspects of applications in windings and energy technology devices.
- For the most important power system applications the students can apply the state of the art and can reflect the main benefits.
- The students have a clear understanding of opportunities, benefits and limitations of superconducting components and devices.
- The students are able to perform the required design calculations and to solve fundamental design questions independently.

Content

As the materials become increasingly mature and powerful, using superconductivity in a variety of applications of electrical engineering is of rising interest and benefit, too. This module focuses on Superconducting Power Systems.

It will provide an overview of the state of the art, will give an insight into the basic setup, the design, the characteristic parameters and the specific operation behaviour of the following applications:

- Power Transmission Cables and Lines
- Motors and Generators
- · Transformers
- Fault Current Limiters
- Magnetic Energy Storage
- Basics of Cryo Technology

For each application a design example is shown and the focus is given on the conceptual design of each application.

The lecturers may change the details of the content without further announcement. Materials will be offered on ILIAS.

Module grade calculation

The module grade is the grade of the oral exam.

Workload

- 1. attendance in lectures and exercises: 15*3 h = 45 h
- 2. preparation / follow-up: 15*3 h = 45 h
- 3. preparation of and attendance in examination: 30 h

A total of 120 h = 4 CR

Recommendation

Having knowledge in "Superconducting Materials" is beneficial. Successful participation in "Superconductivity for Engineers"

M 7.221 Module: Supplementary Studies on Science, Technology and Society [M-FORUM-106753]

Responsible:		istine Mielke ne Myglas					
Organisation: Part of:		nal Examinations					
	Credits 16	Grading scale Grade to a tenth	Recurrence Each term	Duration 3 terms	Language German	Level 4	Version 1

Election notes

Students have to self-record the achievements obtained in the Supplementary Studies on Science, Technology and Society in their study plan. FORUM (formerly ZAK) records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at https://campus.studium.kit.edu/ and on the FORUM homepage at https://www.zak.kit.edu/english/16495.php. The title of the examination and the amount of credits override the modules placeholders.

If you want to use FORUM achievements for both your Interdisciplinary Qualifications and for the Supplementary Studies, please record them in the Interdisciplinary Qualifications first. You can then get in contact with the FORUM study services (stg@zak.kit.edu) to also record them in your Supplementary Studies.

In the Advanced Unit you can choose examinations from three subject areas: "About Knowledge and Science", "Science in Society" and "Science in Social Debates". It is advised to complete courses from each of the three subject areas in the Advanced Unit.

To self-record achievements in the Advanced Unit, you have to select a free placeholder partial examination first. The placeholders' title do *not* affect which achievements the placeholder can be used for!

Mandatory			
T-FORUM-113578	Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration	2 CR	Mielke, Myglas

Mandatory			
T-FORUM-113587	Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society	0 CR	Mielke, Myglas

Competence Certificate

The monitoring is explained in the respective partial achievement.

They are composed of:

- Protocols
- Reflection reports
- Presentations
- Preparation of a project work
- An individual term paper
- An oral examination
- A written exam

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by the FORUM.

Prerequisites

The course is offered during the course of study and does not have to be completed within a defined period. Enrollment is required for all assessments of the modules in the supplementary studies.

Participation in the supplementary studies is regulated by § 3 of the statutes. KIT students register for the supplementary studies by selecting this module in the student portal and booking a performance themselves. Registration for courses, assessments, and exams is regulated by § 8 of the statutes and is usually possible shortly before the start of the semester. The course catalog, module description (module manual), statutes (study regulations), and guidelines for creating the various written performance requirements can be downloaded from the FORUM homepage at https://www.zak.kit.edu/begleitstudium-wtg.

Competence Goal

Graduates of the Supplementary Studies on Science, Technology, and Society gain a solid foundation in understanding the interplay between science, the public, business, and politics. They develop practical skills essential for careers in media, political consulting, or research management. The program prepares them to foster innovation, influence social processes, and engage in dialogue with political and societal entities. Participants are introduced to interdisciplinary perspectives, encompassing social sciences and humanities, to enhance their understanding of science, technology, and society. The teaching objectives of this supplementary degree program include equipping participants with both subject-specific knowledge and insights from epistemological, economic, social, cultural, and psychological perspectives on scientific knowledge and its application in various sectors. Students are trained to critically assess and balance the implications of their actions at the intersection of science and society. This training prepares them for roles as students, researchers, future decision-makers, and active members of society.

Through the program, participants learn to contextualize in-depth content within broader frameworks, independently analyze and evaluate selected course materials, and communicate their findings effectively in both written and oral formats. Graduates are adept at analyzing social issues and problem areas, reflecting on them critically from a socially responsible and sustainable standpoint.

Content

The Supplementary Studies on Science, Technology and Society can be started in the 1st semester of the enrolled degree programme and is not limited in time. The wide range of courses offered by FORUM makes it possible to complete the program usually within three semesters. The supplementary studies comprises 16 or more credit points (LP). It consists of two modules: the Basic Module (4 LP) and the Advanced Module (12 LP).

The Advanced Module is divided into 3 thematic subject areas:

Subject area 1: About Knowledge and Science

This is about the internal perspective of science: students explore the creation of knowledge, distinguishing between scientific and non-scientific statements (e.g., beliefs, pseudo-scientific claims, ideological statements), and examining the prerequisites, goals, and methods of knowledge generation. They investigate how researchers address their own biases, analyze the structure of scientific explanatory and forecasting models in various disciplines, and learn about the mechanisms of scientific quality assurance.

After completing courses in the "Knowledge and Science" area, students can critically reflect on the ideals and realities of contemporary science. They will be able to address questions such as: How robust is scientific knowledge? What are the capabilities and limitations of predictive models? How effective is quality assurance in science, and how can it be improved? What types of questions can science answer, and what questions remain beyond its scope?

Subject area 2: Science in Society

This focuses on the interactions between science and different areas of society, such as how scientific knowledge influences social decision-making and how social demands impact scientific research. Students learn about the specific functional logics of various societal sectors and, based on this understanding, estimate where conflicts of goals and actions might arise in transfer processes—for example, between science and business, science and politics, or science and journalism. Typical questions in this subject area include: How and under what conditions does an innovation emerge from a scientific discovery? How does scientific policy advice work? How do business and politics influence science, and when is this problematic? According to which criteria do journalists incorporate scientific findings into media reporting? Where does hostility towards science originate, and how can social trust in science be strengthened?

After completing courses in the "Sciene in Society" area, students can understand and assess the goals and constraints of actors in different societal sectors. This equips them to adopt various perspectives of communication and action partners in transfer processes and to act competently at various social interfaces with research in their professional lives.

Subject area 3: Science in Public Debates

The courses in this subject area provide insights into current debates on major social issues such as sustainability, digitalization, artificial intelligence, gender equality, social justice, and educational opportunities. Public debates on complex challenges are often polarized, leading to oversimplifications, defamation, or ideological thinking. This can hinder effective social solution-finding processes and alienate people from the political process and from science. Debates about sustainable development are particularly affected, as they involve a wide range of scientific and technological knowledge in both problem diagnosis (e.g., loss of biodiversity, climate change, resource consumption) and solution development (e.g., nature conservation, CCS, circular economy).

By attending courses in "Science in Public Debates," students are trained in an application-oriented way to engage in factual debates—exchanging arguments, addressing their own prejudices, and handling contradictory information. They learn that factual debates can often be conducted more deeply and with more nuance than is often seen in public discourse. This training enables them to handle specific factual issues in their professional lives independently of their own biases and to be open to differentiated, fact-rich arguments.

Module grade calculation

The overall grade of the supplementary course is calculated as a credit-weighted average of the grades that were achieved in the advanced module.

Annotation

Climate change, biodiversity crisis, antibiotic resistance, artificial intelligence, carbon capture and storage, and gene editing are just a few areas where science and technology can diagnose and address numerous social and global challenges. The extent to which scientific findings are considered in politics and society depends on various factors, such as public understanding and trust, perceived opportunities and risks, and ethical, social, or legal considerations.

To enable students to use their expertise as future decision-makers in solving social and global challenges, we aim to equip them with the skills to navigate the interfaces between science, business, and politics competently and reflectively. In the Supplementary Studies, they acquire foundational knowledge about the interactions between science, technology, and society.

They learn:

- How reliable scientific knowledge is produced,
- how social expectations and demands influence scientific research, and
- how scientific knowledge is adopted, discussed, and utilized by society.

The program integrates essential insights from psychology, philosophy, economics, social sciences, and cultural studies into these topics. After completing the supplementary studies programme, students can place the content of their specialized studies within a broader social context. This prepares them, as future decision-makers, to navigate competently and reflectively at the intersections between science and various sectors of society, such as politics, business, or journalism, and to contribute effectively to innovation processes, public debates, or political decision-making.

Additional credit points (supplementary achievements), up to a maximum of 12, can be earned from interdisciplinary achievements and can be included in the supplementary course. Upon request, these supplementary achievements are listed in the certificate of the accompanying course, marked as such, and recorded with their grades as specified in paragraph 9. However, these supplementary achievements are **not** included in the calculation of the overall grade for the accompanying course.

The statutes for the accompanying study programme Science, Technology and Society apply.

Workload

The workload is made up of the number of hours of the individual modules:

- Basic Module approx. 120 hours
- Advanced Module approx. 390 hours
- > Total: approx. 510 hours

In the form of supplementary services, up to approximately 390 hours of work can be added.

Recommendation

It is recommended to complete the supplementary study program in three or more semesters, beginning with the lecture series on science, technology, and society in the summer semester. Alternatively, you can start with the basic seminar in the winter semester and then attend the lecture series in the summer semester.

Courses in the Advanced Module can be taken simultaneously. It is also advised to complete courses from each of the three subject areas in the advanced unit.

Competence Certificate

A performance assessment is obligatory and can be oral, a written exam, or of another kind.

Prerequisites

None

Competence Goal

The students acquire basic knowledge of challenges and system integration technologies from mechanical engineering, precision engineering and electronics

Content

- · Introduction to system integration (fundamentals)
- · Brief introduction to MEMS processes
- Flexures
- · Surfaces and plasma processes for surface treatment
- · Adhesive bonding in engineering
- Mounting techniques in electronics
- Molded Interconnect devices (MID)
- Functional Printing
- · Low temperature cofired ceramics in system integration
- 3D-Integration in semiconductor technology

Workload

The work load is about 120 hours, corresponding to 4 credit points.

Competence	Certificate

Other types of examinations

Prerequisites

T-ETIT-100798

none

Competence Goal

Students can reproduce basic knowledge of digital and analog circuit design and hardware-related software programming. In practice, students are able to apply these methods in the following areas using a current system-on-chip architecture:

- Design of a system architecture for mixed-signal systems
- Simulation of the designed digital and analog circuits
- Debugging the implementations at the simulation and implementation level
- · Verification of the overall system developed through test benches

System-on-Chip Laboratory

In addition, they can apply the hardware / software code design approach and can evaluate implementation targets based on the given requirements (FPGA and ASIC).

Content

In the System-on-Chip Laboratory, a fully-fledged mixed-signal hardware architecture for audio playback based on a system-on-chip (SoC) is developed.

The system design includes the creation of necessary sub-components, their integration into an overall system, and the simulation and verification of the individual components and the overall system. A prototype is implemented and tested on an FPGA basis. The integration is then prepared for a possible ASIC production. Analog circuits are also considered and designed to build an audio amplifier.

Module grade calculation

The grade formation results from the combination of the processing of the exercise sheets, the evaluations during the internship and a final presentation including discussion of the results developed in the project.

Workload

- 1. Presence time in laboratory appointments: 15 * 4 = 60 hours
- 2. Preparation / post-processing: 15 * 4 = 60 hours
- 3. Demonstration and integration tests: 3 * 3 = 9 hours
- 4. Preparation of the final presentation: 15 hours

Recommendation

- Knowledge of Verilog Hardware Description Language, e.g. from Digital Circuit Design
- Knowledge in the design of analog circuits (amplifier circuits, stability considerations), e.g. from the Analog Circuit Design
- Knowledge of VHDL design, e.g. from Hardware Modeling and Simulation
- Knowledge of simulation of digital circuits, e.g. from Hardware Modeling and Simulation
- Knowledge of hardware design processes and algorithms, e.g. from Hardware Synthesis and Optimisation

7.225 Module: Systems and Software Engineering [M-ETIT-100537]

Mandatory						
T-FTIT-100675 Systems and Software Engineering				5 CR	Sax	

Competence Certificate

Written exam, approx. 120 minutes.

Prerequisites

none

Competence Goal

• Students are able to analyse and explain the functional principles and applications of embedded systems.

• Students are able to evaluate and apply maturity models as well as Software Development Life Cycle models including the waterfall model, V-model, prototyping model, agile models, and DevOps.

• Students are able to apply various creativity techniques to develop innovative solutions to problems. They will be able to derive and analyse requirements.

• Students are familiar with diagram formats software modelling languages; they can evaluate and create these based on problem descriptions of an application area. They will be able to create and evaluate functional, data-oriented, algorithmic, state-oriented, and object-oriented views.

• Students are able to understand and apply various aspects of the realization of embedded systems. They will be able to consider implementation alternatives: hardware, co-design and scheduling aspects.

• Students are familiar with the various testing phases in a project and can explain them. They can assess the reliability of a system and understand the concept of functional safety.

Content

The focus of the course is on processes and methods for the design of systems composed of electrical, electronic and electronically programmable systems that contain software, hardware and mechanical components. The desired competencies of the course include the knowledge and goal-oriented use of modeling techniques, design processes, description and representation tools as well as specification languages that correspond to the current state of the art.

Module grade calculation

The module grade is the grade of the written exam.

Workload

Each credit point (LP, Credit Points) corresponds around 25-30h of work effort of the student. Hereby we assume an average student with average performance. The workload is covered by: 1. Participating in lectures, tutorials and practical labs. 2. Preparing and wrap up of the above named units

3. Exam preparation and presence.

Recommendation

Knowledge in Digital Technology and Information and Automation Technology (e.g. module M-ETIT-102102 and M-ETIT-106336)

Competence Certificate

A performance assessment is obligatory; oral exam about 30 minutes

Prerequisites

none

Competence Goal

Based on the elaboration of the basic physics knowledge of the solar irradiation, heat radiation, optics and thermalhydraulics, the student will be able to

- select solar thermal components such as mirrors, glasses, selective absorbers and insulation materials and their manufacturing processes and to calculate and assess their performance,
- identify different collector types and to indicate their potential field of application,
- characterize the entire solar thermal collector system with respect to its performance and derive from the collector characteristics its suitability for different types of use,
- embed collectors into a technical overall system for heat (household, process heat, heat storage networks) or electricity generation (power plant), to calculate the system efficiency and independently develop the basics of its optimization.
- identify adequate thermal storage types for the temporal separation of generation and consumption, to dimension them appropriately and to integrate them into a system concept,
- evaluate solar thermal systems in their entirety (capacity, estimation of system dynamics, response behavior, efficiency) and know options for integration into networks (heat, cold, electricity).

Content

Fundamentals of thermal solar energy from solar irradiation (influence of time and place, modifications in the atmosphere) and their implementation in a collector to integration into a technical overall system. In detail:

1. *introduction* to the energy demand and evaluation of the application potential of solar thermal energy.

2. primary energy source SUN: Sun, solar constant, solar radiation (scattering, absorption in the atmosphere, direct-diffuse radiation, angular influences, radiation balance).

3. solar collectors: basic design of a collector, basics of determining the efficiency, significance of concentration and its limitations, solar thermal collector types (designs, efficiency, system technology).

4. *passive mechanisms of solar thermal energy*: heat conduction in solids and gases, radiation heat transport in transparent and opaque bodies Design requirements and physical principles of solar thermal glasses, mirrors and selective absorbers. Goal oriented selection of materials and manufacturing processes.

5. momentum and heat transport: basic equations of single- and multi-phase transport, basic ideas of local and system engineering calculation methods, stability limits.

<u>Optional</u>

6. solar thermal low-temperature systems: collector variants, methods for system simulation, planning and dimensioning of systems, system-related system design and stagnation scenarios and their handling.

7. solar thermal high-temperature systems: solar thermal power plants (classification of system components, loss mechanisms, upwind power plants), coupling of collector with energy generation process.

At the end:

8. Thermal energy storage: Explanation of terms (energy contents, storage forms and materials, potentials ...), storage concepts (system structure, design ratio), system integration.

9. Solar air conditioning: Determination of cooling capacity, indoor climate, solar cooling methods and evaluation of air conditioning.

Workload

regular lecture attendance: 30 h self-study: 60 h (incl. supplementary searches) exam preparation 30 h

Competence Certificate

Written exam; Duration approx. 90 min

Prerequisites

none

Competence Goal

Students learn that lightweight design is a process of realizing a demanded function by using the smallest possible mass. They understand lightweight construction as a complex optimization problem with multiple boundary conditions, involving competences from methods, materials and production.

Students learn the established lightweight strategies and ways of construction. They know the metallic materials used in lightweight construction and understand the relation between material and vehicle body.

Content

Strategies in lightweight design Shape optimization, light weight materials, multi-materials and concepts for lightweight design

Construction methods Differential, integral, sandwich, modular, bionic

body construction Shell, space-frame, monocoque

metalic materials Steel, aluminium, magnesium, titan

Mandatory									
T-MACH-113069 Vehicle Systems for Urban Mobility						4 CR	Cichon		

Competence Certificate

Oral exam Duration approx. 20 minutes Auxiliary means: none

Prerequisites

none

Competence Goal

Students will gain a basic understanding of the essential traffic, transport policy and technological contexts of urban mobility. On the basis of this basic understanding, different vehicle concepts of public transport in urban and regional environments will be analyzed, compared

and the optimal range of applications will be discussed. In addition to the established public transport systems, special attention will be paid to innovative mobility solutions. In particular, an understanding of how sustainable, systemic mobility solutions should be designed depending on the individual use case is to be created

Content

- Definitions of urban mobility and public transport services
- Comparison and performance parameters of different vehicle concepts
- Rail-bound vehicle systems
- · Bus systems and alternative propulsion systems
- · Definition of an "innovative vehicle concept for public transport".
- · Historical innovative urban vehicle concepts and analysis of why they did not succeed
- · Future innovative urban vehicle concepts and discussion of their market opportunities
- Comparison of urban mobility solutions under the aspects of sustainability, resource conservation, resilience and economic efficiency
- Presentations by external experts

Annotation

A bibliography is available for students to download from the Ilias platform.

Competence Certificate

Writen exam, graded, 90 min.

Competence Goal

After successful attendance of the course, students can:

- conceptualize complex systems with the methods of virtual engineering and continue the product development in different domains
- model the digital product with regard to planning, design, manufacturing, assembly and maintenance.
- use validation systems to validate product and production in an exemplary manner.
- Describe AI methods along the product creation process.

Content

- · Conception of the product (system approaches, requirements, definitions, structure)
- · Generation of domain-specific product data (CAD, ECAD, software, ...) and AI methods
- Validation of product properties and production processes through simulation
- · Digital twin for optimization of products and processes using AI methods

T-MACH-106740	Virtual Engineering Lab	4 CR	Ovtcharova						

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None

Competence Goal

The students should:

- have basic knowledge about the industrial application of Information Technology in product development,
- have understanding about current and future application of information systems in product development processes in the context of Product Lifecycle Management and Virtual Engineering,
- be able to operate current CAx- and PLM-systems in the product development process
- understands demands and relevance of interconnected IT-systems and respective methods for product development

Content

The Module Virtual Engineering A gives an overview about product development processes, beginning with requirement engineering, verification of manufacturing feasibility and virtual operation in the scope of Digital Factory. The guest-lectures contained in this module complete the content of the lecture with introducing current product development processes focusing.

Workload

- regular attendance: 140 hours
- Preparation and reworking: 20 hours
- Exam and exam revision/preparation: 110 hours

Prerequisites

T-INFO-106557

See partial achievements (Teilleistung)

Competence Goal

The student has received fundamental knowledge about wearable robotic technologies and understands the requirements for the design, the interface to the human body and the control of wearable robots. He/she is able to describe methods for modelling the human neuromusculoskeletal system, the mechatronic design, fabrication and composition of interfaces to the human body. The student understands the symbiotic human-machine interaction as a core topic of Anthropomatics and has knowledge of state-of-the-art examples of exoskeletons, orthoses and prostheses.

Content

The lecture provides an overview of wearable robot technologies (exoskeletons, prostheses and ortheses) and their potentials. It starts with the basics of wearable robotics and introduces different approaches to the design of wearable robots and their related actuator and sensor technology. The lecture focuses on modeling the neuromusculoskeletal system of the human body, the interfaces of wearable robots to the human body and the physical and cognitive human-robot interaction for tightly-coupled hybrid human-robot systems. Examples of current research and various applications of lower, upper and full body exoskeletons as well as prostheses are presented.

Workload

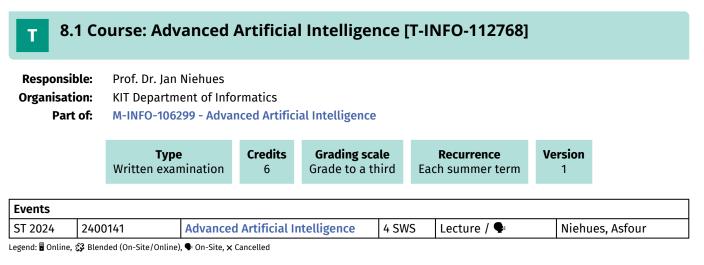

Lecture with 2 SWS, 4 LP 4 LP corresponds to 120 hours, including 15 * 2 = 30 hours attendance time 15 * 3 = 45 self-study 45 hours preparation for the exam

Recommendation

Attendance of the lecture Mechano-Informatics in Robotics is recommended.

Wearable Robotic Technologies

8 Courses

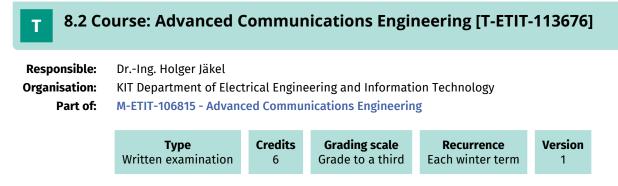

Competence Certificate

The assessment is carried out as a written examination (§ 4 Abs. 2 No. 1 SPO) lasting 60 minutes.

Prerequisites

None.

Competence Certificate

The assessment takes place in the form of a written examination lasting 120 min.

The module grade is the grade of the written exam.

Prerequisites

Competence Certificate

Approx. 30 min oral exam

The Appliance and Power Tool Design Project Work will be examined in conjunction with the concurrent lecture. To ensure that the impact on the overall grade is appropriate, the weighting of the exam is 8 credits.

Prerequisites

The participationin "Appliance and power tool design"" requires the concurrent project work.

Due to organizational reasons, the number of participants is limited. At the beginning of august, a registration form will be available at the IPEK website. In the case of too many applicants, a selection process will be taking place. An early application is advantageous.

Modeled Conditions

The following conditions have to be fulfilled:

1. The course T-MACH-110767 - Appliance and Power Tool Design Project Work must have been started.

Prerequisites

Competence Certificate

Study achievement in the form of a presentation or a term paper or project work in the selected course.

Prerequisites

None

Self service assignment of supplementary stdues

This course can be used for self service assignment of grade aquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendation

It is recommended that the basic seminar be completed during the same semester as the lecture series "Science in Society". If it is not possible to attend the lecture series and the basic seminar in the same semester, the basic seminar can also be attended in the semesters before the lecture series.

However, attending courses in the advanced unit before attending the basic seminar should be avoided.

Recommendation

For a deeper understanding, basic knowledge of system dynamics and control technology is absolutely necessary, as taught in the ETIT Bachelor module "System Dynamics and Control Technology" M-ETIT-102181.

Competence Certificate

The assessment consists of an oral exam (20 min) taking place in the recess period. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

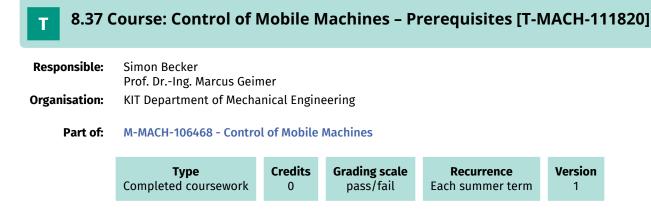

Prerequisites

A prerequisite for participation in the examination is the preparation of a semester report. The preexamination with the code T-MACH-111820 must be passed.

Modeled Conditions

The following conditions have to be fulfilled:

- 1. The course T-MACH-102150 BUS-Controls must not have been started.
- 2. The course T-MACH-111820 Control of Mobile Machines Prerequisites must have been passed.

Competence Certificate

Preparation of a report on the completion of the semester task

Modeled Conditions

The following conditions have to be fulfilled:

1. The module M-ETIT-102266 - Digital Hardware Design Laboratory must not have been started.

Competence Certificate

The examination takes place in form of other types of examination. It consists of a model library developed in the course of a semester-long project in the modeling language Modelica and a presentation of the library lasting 25 minutes. The quality of the model library is evaluated within the framework of the criteria: documentation, formal correctness, functionality, usability, HMI and modeling level of detail. The presentation is evaluated as an additional aspects. The overall impression is evaluated.

The assessment of the developed model library and the presentation of the library will be included in the module grade. More details will be given at the beginning of the course.

Competence Certificate

The final assessment will be an oral examination (20 min) taking place during the recess period. The examination will be offered in ervery semester and can be repeated at any regular examination date.

Prerequisites

none

Recommendation

- General principles of mechanicals engineering
- Basic knowledge of hydraulics
- Interest in mobile machinery

Annotation

At the end of the lecture, participants can explain the structure and function of all discussed drive trains of mobile machines. They can analyze complex gearbox schematics and synthesize simple transmission functions using rough calculations.

Content:

In this course the different drive trains of mobile machinery will be discussed. The focus of this course is:

- mechanical gears
- torque converter
- hydrostatic drives
- power split drives
- electrical drives
- hybrid drives
- axles
- terra mechanics

Media: projector presentation

Literature: Download of lecture slides from ILIAS. Further literature recommendations during lectures.

Competence Certificate

The assessment consists of a written exam (60 minutes) (following §4(2), 1 of the examination regulation).

Students are offered the opportunity to earn a grade bonus through separate assignments. If the grade of the written exam is between 4.0 and 1.3, the bonus improves the grade by a maximum of one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the lecture.

Competence Certificate

The grade is determined by an examination of another type. This consists of an individual knowledge check after the lecture part, the continuous assessment of teamwork during the implementation task and a final presentation. The overall impression is assessed; in addition to the implementation task, the knowledge test and the final presentation are also taken into account.

Prerequisites

none

Recommendation

Basic knowledge of artificial intelligence and machine learning, Programming experience, preferably in Python, English proficiency

Annotation

Limited number of participants.

Legend: 🖥 Online, 🕃 Blended (On-Site/Online), 🗣 On-Site, 🗙 Cancelled

Modeled Conditions

The following conditions have to be fulfilled:

1. The course T-INFO-105142 - Humanoid Robots - Practical Course must not have been started.

Recommendation

- Very good programming skills in at least one high-level programming language are strongly recommended.
- Attendance of the lectures Robotics 1, Robotics 2, Robotics 3, as well as the robotics practical course are recommended.
- Project-specific recommendations (knowledge of C++, Python, ...) will be announced in the individual project descriptions

Annotation

- Internship dates are always by arrangement with the supervising staff member.
- An extension work of the topic as a master thesis is possible in principle.
- The number of participants in this practical course is generally **limited** and varies with the number of available research projects at the institute.

8.92 Course: Humanoid Robots - Locomotion and Whole-Body Control [T-INFO-113395]

Responsible:	Prof. Dr. Katja Mombaur

Legend: 🖥 Online, 🞲 Blended (On-Site/Online), 🗣 On-Site, 🗙 Cancelled

Competence Certificate

The assessment is carried out as an examination of another type (§ 4 Abs. 2 No. 3 SPO).

It evaluates the performance in an individual programming project on the topic of humanoid robots, which consists of the definition and solution of the project itself as well as a subsequent oral presentation in a block event and the submission of a written report. Both components can be completed in the same group of two students.

Withdrawal is possible within the first 7 weeks of the lecture period.

Prerequisites

- Completion of module Robotics 1 or corresponding knowledge required.
- Programing skills
- Active participation in the class is expected from all students and is a necessary requirement for the course.
- As a prerequisite for the participation in the project, students must regularly and successfully participate in the exercises. Students must regularly submit exercise sheets. The number of exercise sheets and the scale for passing will be announced at the beginning of the course.

Recommendation

Attendance of the lectures Robotics I - Introduction to Robotics and Mechano-Informatics in Robotics is required.

8.93 Course: Humanoid Robots - Seminar [T-INFO-105144] Т **Responsible:** Prof. Dr.-Ing. Annotation

Due to organizational reasons, the number of participants is limited. Thus a selection has to be made. For registration to the selection process a standard form has to be used, that can be downloaded from IPEK hompage from april to july. The selection itself is made by Prof. Albers in personal interviews.

Competence Certificate

The success control is carried out in the form of a written test of 120 minutes. If there are fewer than 20 candidates, an oral exam of around 20 minutes can alternatively take place. The module grade is the grade of the written or oral exam.

Prerequisites

none

Recommendation

Knowledge from the lectures "Metrology" or "Metrology in Mechatronics" and "Manufacturing Metrology" as well as basic knowledge of programming (e.g. in Matlab, C / C ++) are helpful.

Annotation

Annotations

The submission of the protocols of all experiments is required for admission to the examination. The quality of the protocols is assessed; for the admission to the exam, the quality must be acceptable.

Attendance of all laboratory dates including the introductory event is required. Already in the event of a single unexcused absence, admission to the examination will not be granted.

Annotation

NwT students attend only part of the lecture

Competence Certificate

Active participation, learning protocols, if applicable.

Prerequisites

None

Self service assignment of supplementary stdues

This course can be used for self service assignment of grade aquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendation

It is recommended that you complete the lecture series "Science in Society" before attending events in the advanced module and in parallel with attending the basic seminar.

If it is not possible to attend the lecture series and the basic seminar in the same semester, the lecture series can also be attended after attending the basic seminar.

However, attending events in the advanced module before attending the lecture series should be avoided.

Annotation

The basic module consists of the lecture series "Science in Society" and the basic seminar. The lecture series is only offered during the summer semester.

The basic seminar can be attended in the summer or winter semester.

Legend: 🖥 Online, 🕸 Blended (On-Site/Online), 🗣 On-Site, 🗙 Cancelled

Competence Certificate

The success control takes place in the form of a written exam, usually 90 minutes in length, according to § 4 Abs. 2 Nr. 1 SPO.

A bonus can be acquired through successful participation in the exercise as a success control of a different kind (§4(2), 3 SPO 2008) or study performance (§4(3) SPO 2015). The exact criteria for awarding a bonus will be announced at the beginning of the lecture. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The bonus is only valid for the main and post exams of the semester in which it was earned. After that, the grade bonus expires.

Prerequisites

none.

Modeled Conditions

The following conditions have to be fulfilled:

- 1. The course T-WIWI-106340 Machine Learning 1 Basic Methods must not have been started.
- 2. The course T-INFO-110630 Machine Learning Basic Methods must not have been started.

Recommendation

- Attendance of the lecture "Foundations of Artificial Intelligence" ("Grundlagen der Künstlichen Intelligence")

- Knowledge in python
- Mathematics-heavy lecture. The basics will be reviewed, but mathematical proficiency is helpful

- 40% assessment of the final case study as individual performance,
 60% competer evaluation which includes working on 5 case studies and defending the
 - 60% semester evaluation which includes working on 5 case studies and defending those (For both assessment types, the best 4 of 5 tries count for the final grade.):
 - $\circ~$ 40% assessment of the result of the case studies as group work,
 - 20% assessment of the oral examination during the case study colloquiums as individual performance.

A detailed description of the learning control can be found under Annotations.

Prerequisites

none

Recommendation

Recommended elective subject: Probability Theory and Statistics

Annotation

Students are divided into groups for this course. Five case studies are carried out in these groups. The results of the group work during the lecture period are presented and evaluated in writing. In the oral examination during the case study colloquiums, the understanding of the result of the group work and the models dealt with in the course is tested. The participation in the oral defenses is compulsory and will be controlled. For the written submission the group receives a common grade, in the oral defense each group member is evaluated individually.

After the lecture period, there is the final case study. This case study contains the curriculum of the whole semester. The students work individually on this case study which takes place at a predefined place and time (duration: 4h).

Legend: 🖥 Online, 🎲 Blended (On-Site/Online), 🗣 On-Site, 🗙 Cancelled					

Competence Certificate

The assessment takes place in the form of a written examination lasting 120 min. and 120 points.

The module grade is the grade of the written exam.

Bonus points can also be awarded for a student presentation within the lecture. Bonus points are awarded as follows:

- solving bonus tasks is voluntary.
- students register in ILIAS in groups of max. 3 participants for a bonus task.
- the solution to the bonus task must be entered in ILIAS by the specified submission deadline.
- the solutions are read by the lecture assistants and, if necessary, corrected and approved.
- the groups present their solutions in the lecture (20 min).
- the bonus points are awarded individually to each student by the lecturer on the basis of the written solution and the presentation.
- Each student can earn a maximum of 6 bonus points.
- Bonus points can only be earned once.

The bonus points are credited as follows:

- A maximum of 6 points can be credited to the exam result for the passed bonus task.
- The grade can thus be improved by a maximum of one grade step.
- The total number of points remains limited to 120 points. The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for any examinations taken at a later date.

Competence Certificate

The assessment of success takes place in the form of a written examination lasting 120min. The grade corresponds to the result of the written examination.

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The course T-ETIT-100971 - Nanoelectronics must not have been started.

Recommendation

Successful completion of the modules "Superconductivity for Engineers" and "Einführung in die Quantentheorie für Elektrotechniker" is recommended.

Competence Certificate

Advanced Internship: Participate in practicle exercise courses and complete the colloquia successfully.

Elective Subject: Participate in practicle exercise courses and complete the colloquia successfully and presentation of a specific topic.

Prerequisites

The course is limited in capacity, therefore the allocation of places is based on § 5 (4) in the Study and Examination Regulations

This results in the following selection criteria:

The selection is based

- on the study progress (here the study progress in credit points and not the study progress in semesters is taken as a basis),
- on the waiting period in the case of equal progress in studies
- by lot if the waiting period is the same.

The procedure is explained in more detail on ILIAS.

Successful participation requires active and continuous participation in the course.

8.210 Course: Project Management in the Development of Products for Safety-Т Critical Applications [T-ETIT-109148]

Competence Certificate

The success control takes place in the form of a written exam, usually 90 minutes in length, according to § 4 Abs. 2 Nr. 1 SPO.

A bonus can be acquired through successful participation in the exercise as a success control of a different kind (§4(2), 3 SPO 2008) or study performance (§4(3) SPO 2015). The exact criteria for awarding a bonus will be announced at the beginning of the lecture. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The bonus is only valid for the main and post exams of the semester in which it was earned. After that, the grade bonus expires.

Prerequisites

none

Recommendation

- Students should be familiar with the content of the "Foundations of Artificial Intelligence" lecture.
- Good Python knowledge is required.
- Good mathematical background knowledge is required.

8.219 Course: Reliability and Test Engineering [T-MACH-111840]

Competence Certificate

Competence certificate in the form of an examination of another type.

The overall grade is composed as follows:

- 50% assessment of an examination as individual performance as the conclusion of the lecture block.
- 50% assessment of colloquia as individual performance on defined milestones during the project work

Failing the final examination or the colloquia does not result in failing the course.

Prerequisites

None

Recommendation

None

Annotation

The course consists of two components. Theoretical knowledge and basics about structured system design are taught in lecture and exercise. In parallel, a practical part takes place throughout the semester. In this, the students design and implement a mechatronic system in small groups using industry-related hardware and software to deal with a given task in the logistics environment.

ST 2024				2 SWS	Seminar / ⊈ ⊧	Mombaur		

Legend: 🖥 Online, 🕄 Blended (On-Site/Online), 🗣 On-Site, 🗙 Cancelled

Competence Certificate

The assessment is carried out as an examination of another type (§ 4 Abs. 2 No. 3 SPO). This includes the preparation of a term paper in form aof a scientific paper (6 pages double column) an oral presentation with slides (30 Min + 15 Min discussion). Students may redraw from the examination during the first two weeks after the topic has been communicated.

Participation in the block seminar is mandatory. Students have to actively participate in all discussions.

Recommendation

Knowledge in Robotics (e.g. from the class Robotics 1 and follow-ups) is helpful

Competence Certificate

Success is assessed in the form of a written examination lasting 120 minutes.

Prerequisites

none

Recommendation

Knowledge of the contents of the modules "Signals and Systems", "Measurement Technology" and "Methods of Signal Processing" is strongly recommended.

Annotation

A prerequisite for admission to the examination is the submission of protocols of all experiments. The quality of the protocols will be assessed; they must be acceptable for admission to the examination.

Attendance is compulsory during all practical sessions, including the introductory session. Admission to the examination will not be granted for even one unexcused absence.

Legend: 🖥 Online, 🚱 Blended (On-Site/Online), 🗣 On-Site, 🗙 Cancelled

Competence Certificate

Successfully passing the Tutorial is a prerequisite for taking part in the exam "Continuum Mechanics of Solids and Fluids" (T-MACH-110377).

For students of Mechanical Engineering (BSc) that have chosen the Major Field "Continuum Mechanics" and for students of Material Science and Material Technology (BSc) the prerequisites consist of successfully solving the written homework sheets as well as the computational homework sheets during the associated computer tutorials.

For students of Mechanical Engineering that have chosen a different Major Field of students from different fields of study the prerequisites consist of successfully solving only the written homework sheets.

Prerequisites

None

Annotation

Due to capacity reasons it is possible that not all students of this course can be admitted to the computer tutorials. Students of the bachelor's degree program in mechanical engineering who have chosen the Major Field Continuum Mechanics (SP-Nr 13) and students of the bachelor's degree program in material science and material technology will be admitted to the computer tutorials in any case.

If additional places are available in the computer tutorials for this course, these will be allocated according to the BSc average grade.
